
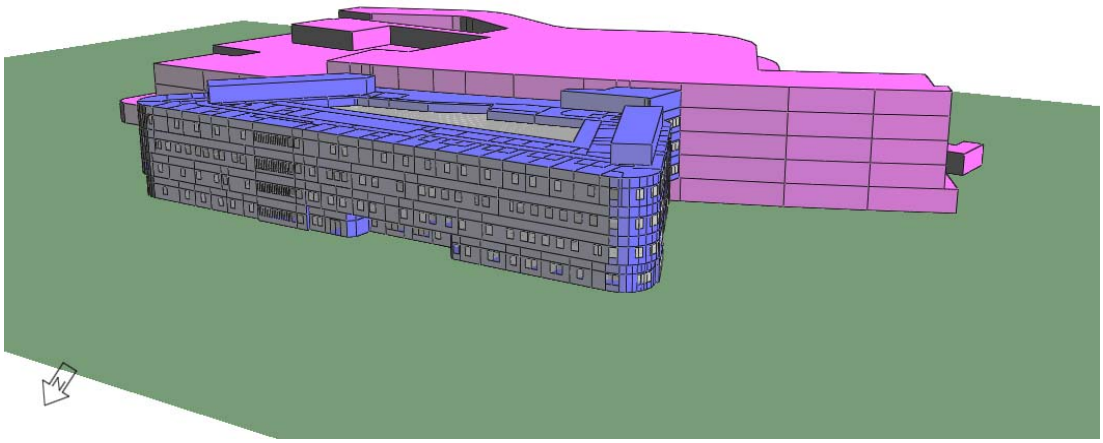

Figure 1: 3D Model of RHSC and DCN – Block A

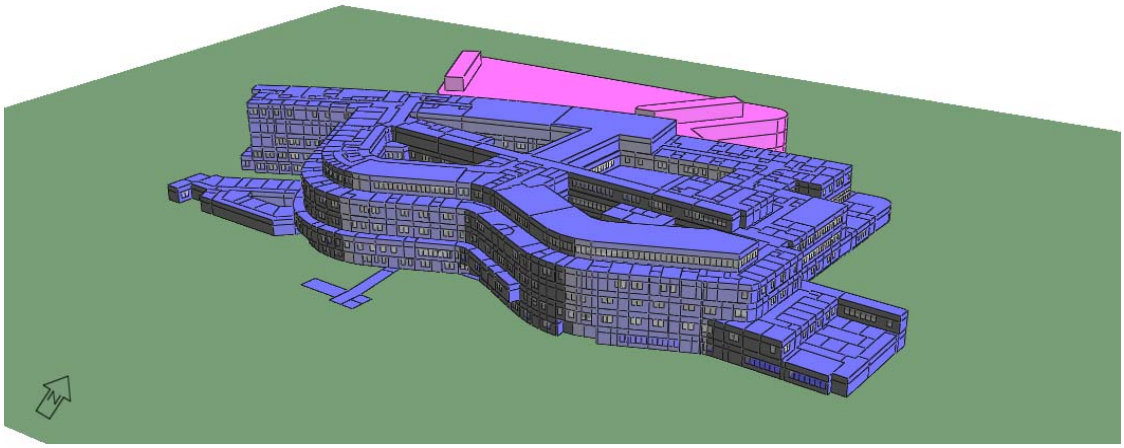

Figure 2: 3D Model of RHSC and DCN – Block B

2. SUSTAINABILITY

2.1 Introduction

The energy hierarchy approach in the design of the building for the facility allows the development to meet and better the carbon reduction requirements of Section 6 (Energy) of the 2013 Scottish Building Standards and achieve a Silver rating under Section 7 (Sustainability) of the 2013 Scottish Building Standards.

The development also meets the sustainability principles set out in the Edinburgh Standards for Sustainability as detailed in the document issued by the Edinburgh City Council "Edinburgh Standards for Sustainable Buildings - Section 3.2 Principles & Standards for Sustainable Building – Key Recommendation details the requirements to meet the standards".

The Project increases the overall energy efficiency of the development through energy efficient design and management. The energy strategy optimises the incorporation of energy efficiency measures into the facility and meets the 2013 Scottish Building Standards carbon reduction requirements. An IES model has been set-up for 2013 Scottish Technical Standards for Section 6 Compliance and EPC. In order to achieve the ENE1 BREEAM credit the IES model has also been simulated using England and Wales Part L2A 2010 methodology.

We will provide a thermally comfortable environment maximising available natural daylighting where the room type and geometry permits and minimising environmental impact, at construction stage and through the facility's lifecycle.

The energy hierarchy adopts passive design features to lower the baseline energy demand, utilises energy efficient building systems and controls before adopting low and zero carbon technologies to reduce carbon emissions further.

This holistic approach in designing the facility and its systems provides reliable low energy and low carbon solutions, which complement the healthcare environment and the needs of the facility users.

2.2 Energy & Resource Conservation

Our design achieves energy and resource conservation through the following prescriptive energy and carbon reduction. Please refer to the document "4.11 – BREEAM Assessment – Issue 2" for additional information on meeting the requirements for BREEAM Ene01.

- 8 credits for Ene01 reduction of emissions in the BREEAM assessment have been achieved (demonstrated through Part L2A 2010 assessment using the BREEAM Ene01 calculator, as explained in the following sections of this document),
- 23.21% of the Sites energy is provided by low carbon and renewable energy sources – Natural Gas Combined Heat and Power (CHP) (derogation submitted regarding the use of Natural Gas CHP in place of a renewable technology) and Solar Photovoltaic Panels. Please refer to electronic document "RHSC DCN IHS Lothian Energy Calculations – Financial Close" for the calculation.
- Scottish Technical Standards 2013 Section 6 Compliance
- Scottish Technical Standards Section 7
- Aspect Silver Level 1: carbon dioxide emissions (Building Emission Rate) are to be 28.6% lower than the Target Emission Rate (TER) set by the 2010 standards. Please refer to electronic document of "RHSC DCN IHS Lothian Energy Calculations – Financial Close" for the calculation
- Edinburgh Council Standard for Sustainable Buildings
- The delivered energy usage for development has achieved design target proposal at Financial Close of 49 GJ/100m^3 of EnCO2de which is less than 55 GJ/100m^3, hence it has met the requirement set by the Scottish Health Technical Memorandum 07-02.

2.3 Energy Approach

2.3.1 Passive Design

The following passive design measures are included

- High performance façade solution with low U-Values and solar transmittance. Details of U-values and solar transmittance refer to the electronic document of "RHSC DCN IHS Lothian Energy Model Input Data – Financial Close".
    - External Wall – 0.20 w/m^{2}k
    - Ground Floor – 0.20 w/m^{2}k
    - Roof – 0.15 w/m^{2}k
    - Window – 1.60 w/m^{2}k
    - Rooflight – 2.00 w/m^{2}k
    - G-Value Window – 0.64 (Block A)
      0.50 (Block B)
    - Window Light Transmission – 0.76
- Low air permeability - the air permeability target value used in the model is 5.
- Size of glazing openings has been examined and proposed through early development with the architect. The proposed glazing strategy will vary according to room activity for each space. The main occupied areas glazed openings are based on the architects practical knowledge of fenestration and our experience of solutions that achieve the balance of natural daylight and reducing unwanted solar gains. Solar controlled glazing is applied to the east, south and west facing facades to reduce the risk of overheating.
- Consideration of building orientation has been taken into account during the early building design process. Due to the shape and complexity of the building geometry and with the repetitiveness of the glazing area along all façades, adjustments to the building orientation will not have a large impact on improving the building energy performance. For example, when rotating the building by 45 degrees, the total energy consumption of some rooms have decreased, but increases in other rooms and the total energy consumption of the whole building has not changed greatly. As mentioned above, the glazing area was determined by the room activity of each space and the balance of glazing proposed does not merit solar shading devices to be used in the building design.
- Thermal mass has been considered as a strategy, which has been achieved through the concrete slab construction. In order to achieve maximum heat absorption, the surface is proposed to be designed as:
    - be 100-200mm thick to provide sufficient mass for optimal heat storage
    - be insulated underneath the slab or on the exterior face of external walls
- Natural ventilation has been incorporated and working in conjunction with mechanical ventilation (mixed mode ventilation) for perimeter rooms in the facility. The natural ventilation is to be operated through openable windows. The strategy is to use natural ventilation whenever it is feasible or desirable, to maximize comfort. To avoid the risk of over cooling, change-over designs have been adopted, where the facility "changes-over" between natural ventilation and mechanical ventilation on a seasonal or even daily basis. No pollution sources have been identified nearby the Site and additionally the building site is located in a suburban tree lined environment, therefore the proposed natural ventilation strategy is feasible. Details of rooms designed with mixed mode ventilation refer to the electronic document "RHSC DCN IHS Lothian Operational Energy Model Input Data – Financial Close".

2.3.2 Energy Efficiency

The following energy efficient building systems are included and for details of the values assigned in the simulation model; refer to the electronic document “RHSC DCN IHS Lothian Operational Dynamic Energy Model Input Data – Financial Close”. For technical information of how these energy efficiency systems operate in the building refer to PCP document “Section 4.9 Mechanical & Electrical Engineering”.

- Reduced lighting power densities / high efficiency fluorescents and the use of 50% LED lighting;
- Presence detection – auto on/off sensors are applied; refer to the electronic document “RHSC DCN IHS Lothian Operational Energy Model Input Data – Financial Close”;
- Low specific fan powers refer to the electronic document “RHSC DCN IHS Lothian Operational Energy Model Input Data – Financial Close”;
- Mechanical ventilation units incorporating heat recovery minimum 60%;
- Variable speed pumps with multiple pressure sensors on all main circulating heating and cooling pumps;
- Building controls to ensure the optimum performance of the systems; refer to PCP document “Section 4.9 Mechanical & Electrical Engineering”;
- Metering and sub-metering to allow better management of energy uses all thermal and electrical energy to be sub-metered; refer to PCP document “Section 4.9 Mechanical & Electrical Engineering”;
- Low loss transformers and power factor correction >0.95 refer to PCP document “Section 4.9 Mechanical & Electrical Engineering”;
- Free cooling chillers using air cooled chillers refer to PCP document “Section 4.9 Mechanical & Electrical Engineering”.

2.3.3 LZCT

The following low and zero carbon measures are included.

- Gas fired Combined Heat and Power (CHP), detailed as the table below:

Table 1 – Combined Heat and Power detail

Combined Heat and Power	
Fuel	**Natural Gas**
Performance Rated Output (%)	100
Heat Output (kW)	654
Thermal Efficiency (%)	44
Electrical Efficiency (%)	40
Performance Minimum Output (%)	50
Thermal Efficiency (%)	48
Electrical Efficiency (%)	36.5
Profile	G1547_CHP_Annual

The model allows 1 day CHP downtime every 6 months for maintenance. For details of how CHP is operated in different seasons and loads refer to Appendix 4.8 CHP Utilisation Strategy.

- Solar Photovoltaic’s (PV) providing electricity for use within the facility, detailed as the table below:

Table 2 – Photovoltaic Panels detail PV setup

Photovoltaic Panels	
Area (m2)	800
Type	Polycrystalline
Nominal Efficiency (%)	15
Nominal Cell Temperature (oC)	45
Temperature Coefficient	0.004
Electrical Conversion Efficiency (%)	95
Inclination Angle (deg)	30
Angle from North (deg)	180.0 (South)

2.4 Scottish Technical Standards Section 6 Compliance

Section 6 (Energy) of the Scottish Building Regulations aims to ensure that effective measures for the conservation of fuel and power are incorporated in buildings. In addition to limiting energy demand through specification of the performance of building fabric and building services, a carbon dioxide emissions standard (Standard 6.1) obliges designers of new buildings to consider building performance in a holistic manner.

The Scottish Building Regulations Technical Standards Section 6 (Energy) details the calculation methodology and the modeling has been carried out in accordance to the methodology and the modeling has been carried out in accordance to the methodology using approved DSM software IES.

The TER with the benchmark applied must be achieved but the inclusion of LZC technologies is not mandatory.

UK calculation tools conform with European Directive 2002/91/EC and are to be used with the carbon dioxide emissions standard and in the production of Energy Performance Certificates (EPCs). For non-domestic buildings, the National Calculation Method (NCM) is used.

Dynamic Simulation Model (DSM) primarily applies to building analysis software that can model the thermal dynamic response of buildings. These software tools can be used both to demonstrate compliance with Standard 6.1 of the Building Regulations and for producing EPCs.

Approved software IES VE 2012 demonstrates that Project Co will achieve compliance with Section 6 of the Scottish Technical Standards refer to PCP document “Section 4.9 Mechanical & Electrical Engineering”.

Appendix 4.1 of this document includes the Section 6 BRUKL report. The table below summarises the results of the compliance analysis:

Table 3 Summary results of the Section 6 carbon dioxide emission

Block	Section 6 Target Emission Rate (TER) kgCO2/m^2	Section 6 Building Emission Rate (BER) kgCO2/m^2	Section 6 Compliance?
A	45.9	31.1	Yes
B	37.4	27.0	Yes

2.5 Scottish Energy Performance Certificate

The Energy Performance Certificate (EPC) has been introduced through European legislation and the Energy Performance of Buildings Directive (EPBD). The certificate provides an illustration of the energy efficiency of a building based on standard assertions for occupation and use. The EPC shows the rating range for a building as **A-G**, with **A** being the most efficient.

Standard 6.9 of the Scottish Technical Standards note that every building must be designed and constructed in such a way that:

a. an energy performance certificate for the building is affixed to the building.

b. the energy performance certificate is displayed in a prominent place within the building.

The certification must be carried out using the Directive compliant methodology and the calculation tool, which was used to assess compliance with Standard 6.1.

Using the approved software, IES VE 2012 predicts that Project Co will achieve a minimum EPC rating of C.

Appendix 4.2 of this document includes the draft EPC.

2.6 Section 7 Compliance

The Energy Strategy allows the development to comply with Section 7 Aspect Silver 1 Level.

The standard sets out to encourage developments to go beyond the minimum standards of sustainability required within the Building Standards Sections 1 to 6. Details refer to *Technical Handbook: Non-domestic – Sustainability* for additional guidance on the ratings applicable.

The aim of the standard is to:

- Recognise the level of sustainability already achieved, as compliance with the 2010 regulations is the benchmark level.
- Encourage more demanding sustainable standards.
- Encourage consistency between planning authorities that use supplementary guidance to promote higher levels of sustainability.

The standard will provide a sustainability "label" to the building, which will require to be displayed prior to completion as per an EPC certificate.

A building at this first optional upper level (in this aspect only) should meet all the standards in sections 1 – 6 that apply to the building for the bronze level and in addition, the building should comply with the following:

Carbon dioxide emissions – Under the guidance to standard 6.1, carbon dioxide emissions (Building Emission Rate) is to be 28.6% lower than the Target Emission Rate (TER) set by the 2010 standards. To establish this, the TER from NCM calculation should be multiplied by 0.714, to give a revised figure that the BER should not exceed.

Approved software IES VE 2012 demonstrates that Project Co will achieve compliance with Section 6 of the Scottish Technical Standards.

Appendix 4.1 of this schedule includes the Section 6 BRUKL report. The table below summarises the results of the compliance analysis:

The Energy Strategy allows the development to comply with Section 7 Aspect Silver 1 as summarised below:

The two models Block A and B results have been multiplied by an appropriate weighting factor based on the building floor area to calculate the average carbon emissions figures from Block A and B results. Refer to the document of "RHSC DCN IHS Lothian Energy Calculations – Financial Close".

Table 4 Summary of the average Section 6 compliance results for the overall building with appropriate weighting factor applied.

Block	Section 6 Target Emission Rate (TER) kgCO2/m2	Section 6 Building Emission Rate (BER) kgCO2/m2	Section 7 Improvement (Target 28.6%)
All	39.10	27.82	28.84%

2.7 Edinburgh Council Standard for Sustainable Buildings

The aim of the Edinburgh Standards for Sustainable Building is to promote sustainable development that mitigates against climate changes caused by carbon emissions.

Planning application now have to be accompanied by a sustainability statement which details how the applicant proposes to meet the sustainability standards. The standards are divided according to six key principles/themes;

1. Design quality
2. Inclusive, safe and healthy environments
3. Reduction of climate change and increase of renewables
4. Use of sustainable resources and materials
5. Reduction of pollution and increase of recycling
6. Improvement in sustainable construction and operation

To ensure the standards are met the sustainability statement poses a series of questions under each principle, with the applicant's response to the each question being evaluated and scored. The applicant must reach a minimum threshold of points for each section/principle with the scoring system based generally on whether the standard is met or not. The minimum threshold of points that must be obtained can vary depending upon the type, location and importance of the proposed development.

There are however, two mandatory standards under the third principle which have been met.

- CO^2 emissions from the development are at least 5% lower than the Target Carbon Dioxide Emissions Rating (TER).
- A minimum of 10% of the energy requirement for the development is to be supplied by renewable energy generation.

Project Co have provided input to the Edinburgh Standards for Sustainable Building S1 form. This sustainability statement has now been submitted to the City of Edinburgh Council to discharge planning condition No. 1(j). Please refer to Appendix 4.3 Edinburgh Standards for Sustainable Building S1 form.

Derogation has been submitted regarding the use of natural gas fuelled CHP in place of renewable technology.

2.8 Scottish Health Technical Memorandum 07-02

The Scottish Health Technical Memorandum 07-02 (EnCO2de) requires that the delivered energy usage for the development is less than 55 GJ/100m^3. The Financial Close Energy Model has achieved 49 GJ/100m^3.

Compliance has been achieved and this is confirmed by the operational models provided which have been combined with additional energy consuming systems not included within the model, namely – lifts, catering, freezers and external lighting.

The combined energy model results are detailed in the electronic document ‘RHSC DCN IHS Lothian Operational Energy Model – Financial Close’.

The allowances and operational details, as entered into the dynamic model, are detailed in the electronic document ‘RHSC DCN IHS Lothian Energy Model Input Data-Financial Close’ and Appendix 4.4 ‘Energy Model Inputs Templates – Financial Close’.

2.9 Ene01 Reduction of Emissions BREEAM Assessment

The energy strategy for the development achieves a minimum of 6 credits for issue Ene 01 Reduction of CO_2 emissions.

The following outputs have been assessed for the calculation of the credit:

- Energy demand for the facility.
- Energy consumption for the facility.

- CO_2 emissions for the facility.

Using the above an Energy Performance Ratio for New Constructions (EPR_{NC}) is generated for the development which is then judged against benchmark scales using the English Building Regulations Approved Document Part L 2A.

The Financial Close Energy Model has achieved 8 credits and demonstrated a 25% reduction in CO_2 emissions under Part L2A 2010 arising from regulated building energy consumption. Refer to Appendix 4.5 'BREEAM Ene01 Compliance Checker Calculator" for details. A weighted factor that has been applied to both Block A and B Part L results to determine the 25% reduction.

Refer to document '4.11 – BREEAM Assessment" for further information on BREEAM credits.

2.10 Potable Water Consumption

Potable water consumption for the Facilities will not exceed 170,000 litres/bed/annum.

As per the SHTM 01-01 Water Safety for Healthcare Premises the development, construction, installation and maintenance of hot and cold water supply systems are vital for public health.

Healthcare premises are dependent upon water to maintain hygiene and a comfortable environment for patients and staff, and for clinical and surgical care.

Since the interruption of water supply can disrupt healthcare activities the design of systems must ensure that sufficient reserve water storage is available to minimise the consequence of disruption, while at the same time ensuring an adequate turnover of water to prevent stagnation in storage and distribution vessels.

Water provision to the Project will be fully compliant with the SHTM 04-01 and will achieve two credits on BREEAM Wat-01 Water Consumption. The core water provision will be maintained with the improvements and water saving measures based on:

- Reduced water consumption through specification of water efficient fittings. The fittings will allow the Project to achieve Performance Level 2 within BREEAM credit Wat-01.
- Metering of water consumption and provision of leak detection systems to achieve BREEAM credits Wat-02 and Wat-03.
- Motorised valves on water distribution to toilets controlled via presence detectors to minimise water wastage i.e. room occupied water available, room unoccupied water not available to achieve BREEAM credit Wat-03.
- Water efficient fittings in line with BREEAM credit Wat-01.

Please refer to "*4.11 – BREEAM Assessment*" for further explanation of BREEAM credits.

3. OPERATIONAL ENERGY MODEL

3.1 Introduction

This section details the methodology and results of the Energy Model. The results detailed in this document are based on a combination of actual data, NCM values and a competent engineer's knowledge of building services. The model has used actual equipment efficiencies proposed for the facility. However, these figures should not be deemed to give 100% accuracy and thus should not be used for detailed energy reference. The data detailed in this document will be a guide only to evaluate the actual energy consumption of the facility and may include data collected from analysis of previous projects.

The results given in this report are based on the output of a complex, dynamic thermal model which takes account of predicted data; relating to plant and systems, published data and theoretical judgement with regards to the following design criteria; building orientation, geometry and fabric, climate data, internal gains and occupancy profiles, plant efficiencies and operational hours. Although actual data and design parameters have been used during this detailed analysis, there is still a large amount of uncertainty. Certain information that will affect the 'true' energy consumption of the facility include, occupancy times, behaviour characteristics of the occupants and detailed information on services. The outputs from the model contain theoretical and actual data and indicate a better indication of the thermal performance of the facility throughout the year compared to the facility based on NCM values.

In addition to these assumptions and any stated facility usage characteristics, the importance of user diligence should be highlighted as the simulation is modelled on this principal. Diligent use of space involves users not leaving equipment (computers), heating and lighting switched on all the time.

Dynamic Simulation Models (DSM) contain inherent simplifications and assumptions compared to the way that a real building would operate. For example, DSM use a simplified approach for the heat flow through the ground floor slab with an assumed ground temperature, U-values are static, when they are actually dynamic and change with temperature and other climatic conditions and use standard weather data sets based on historic weather data, which will be different from the conditions in any given year that the facility is operating.

3.2 Modelling Methodology

The general procedure for this investigation comprises the creation of a 3D geometrical model of the proposed building using approved Integrated Environmental Solutions Virtual Environment 2012 (IES VE 2012). This is referred to as IES.

The methodology set out proposes that the energy use of complex systems heating, cooling, humidification, ventilation systems should be evaluated using some form of dynamic simulation model (DSM).

DSM should provide a better estimate of energy use compared to steady state calculations as they take into account more of the complexities of the variation in energy use across the year.

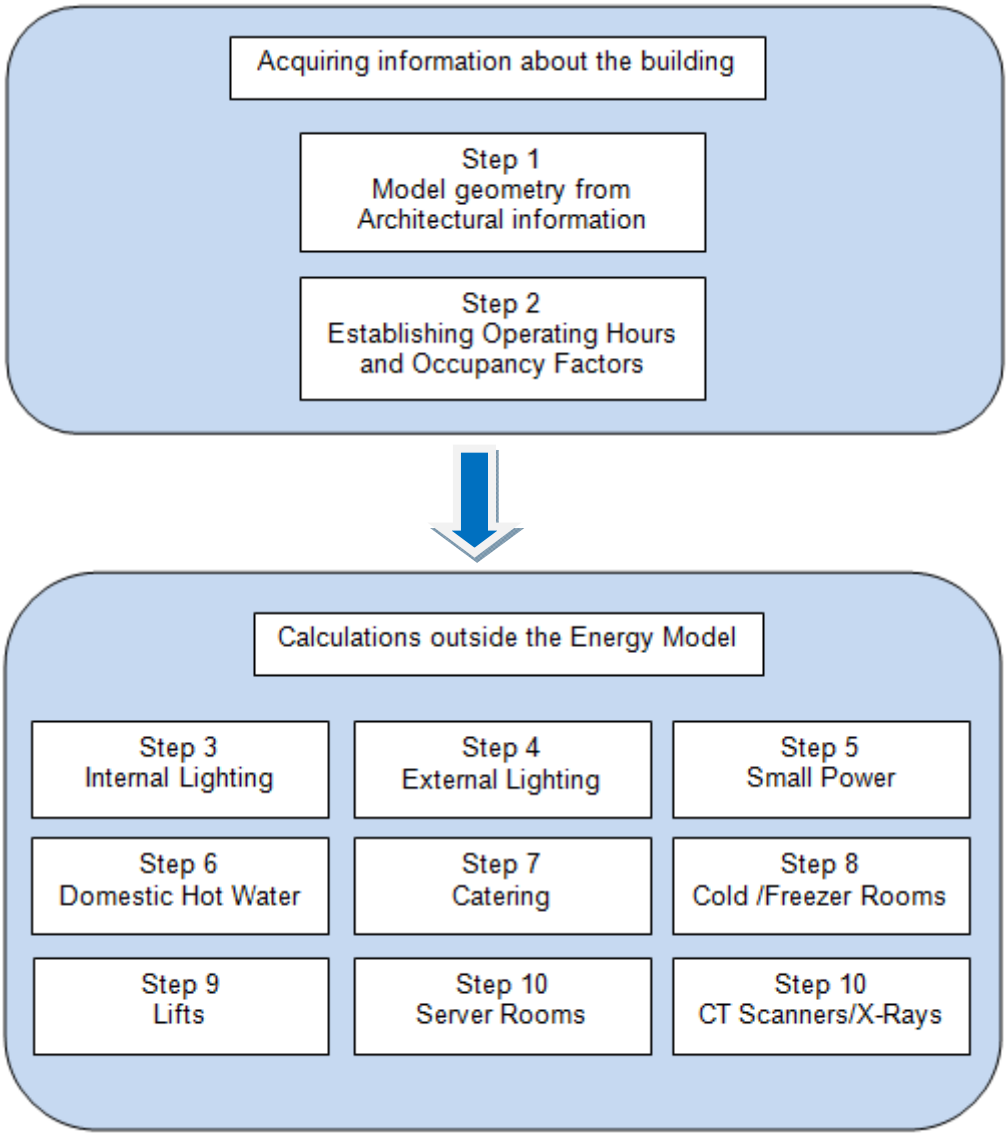
The model has been zoned and internal conditions (heat gains and environmental controls) and constructional building elements attributed to the model. This building model allows simulation results to be obtained for:

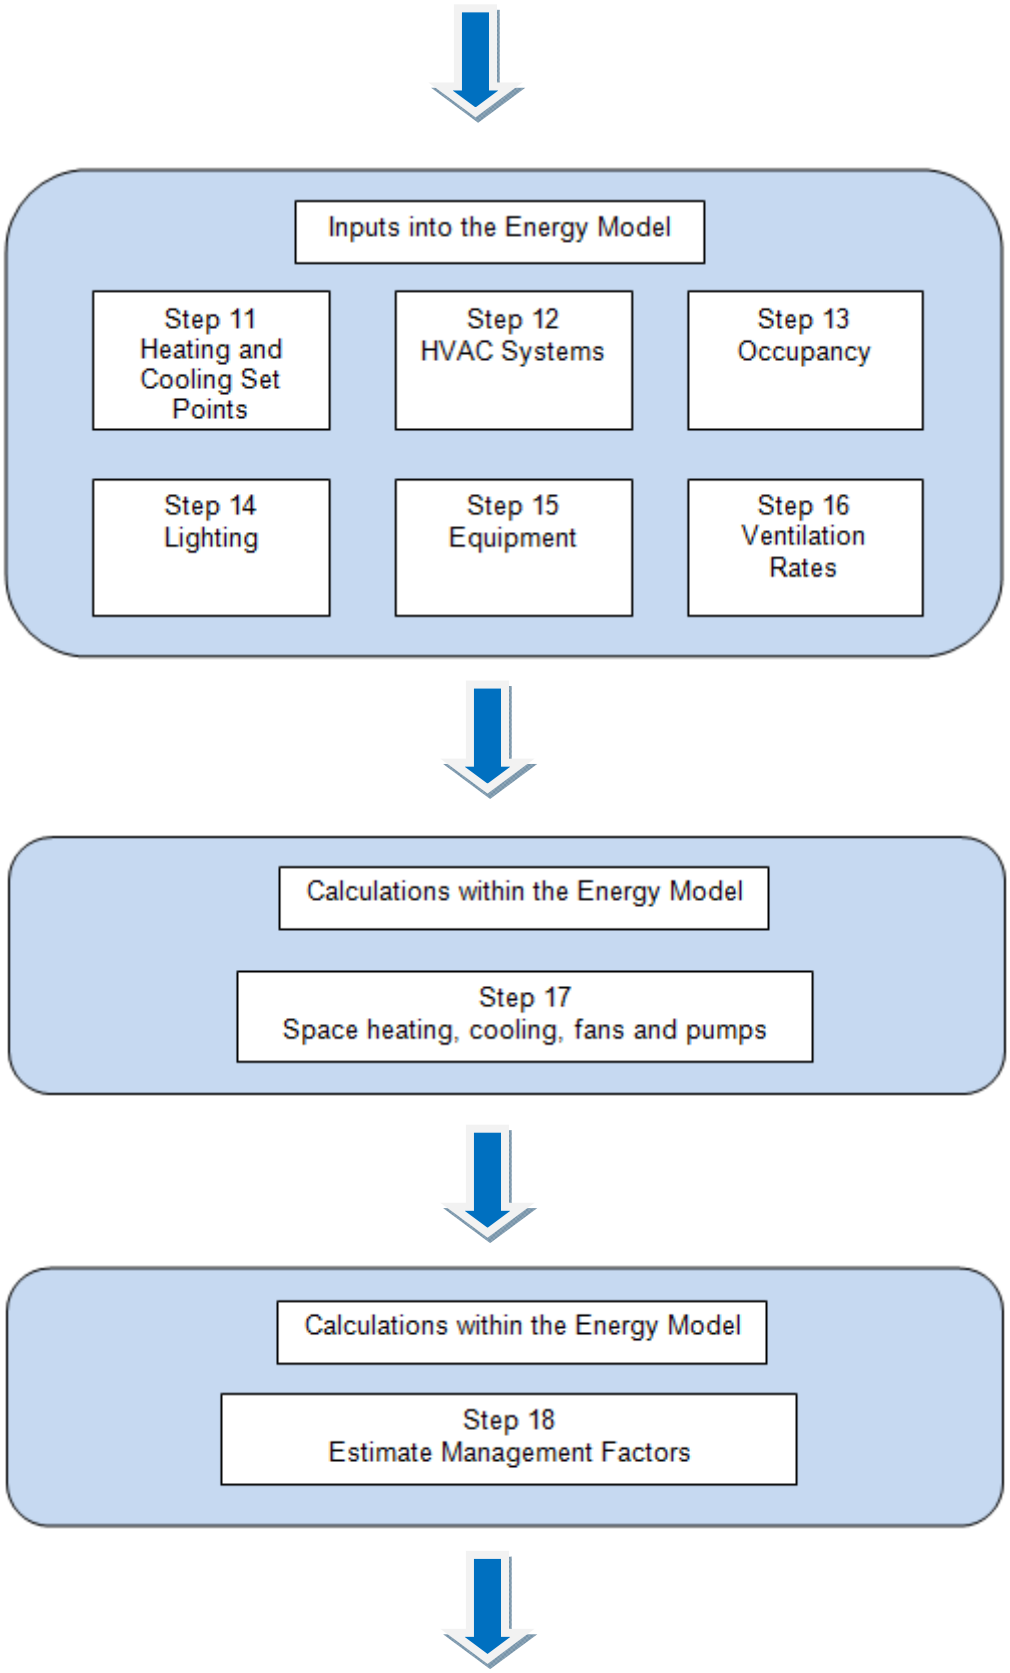
- Total natural gas
- Total electricity usage
- Boiler Loads
- CHP generated heat
- DHW heating demand
- Total Building energy

- Total carbon emission
- Model Construction

A 3D model of the design building has been constructed within IES VE 2012. The building model zoned into separate areas dependant on function and building type.

The flow chart below details the methodology approach adopted to evaluate the operational energy of the building.





Inputs into the Energy Model
Step 11
Heating and Cooling Set Points
Step 12
HVAC Systems
Step 13
Occupancy

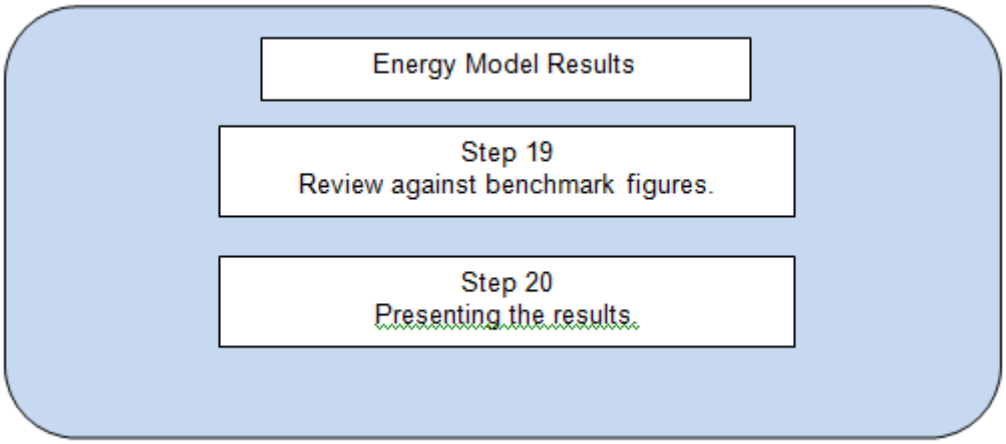
Lighting
Step 15
Equipment
Step 16
Ventilation Rates
Calculations within the Energy Model
Step 17
Space heating, cooling, fans and pumps
Calculations within the Energy Model
Step 18
Estimate Management Factors



3.2.1 Model Attribution

In order to collect accurate data, the model has been fully attributed with respect to it's building elements, climatic data and internal conditions, as detailed in the electronic document of "RHSC DCN IHS Lothian Energy Model Input Data – Financial Close" and Appendix 4.4 'Energy Model Inputs Templates – Financial Close'.

3.2.2 Building Elements

Each building element is specified with a material construction of close approximation to the design building. Construction elements have been developed from the proposed architectural details, as shown in the electronic document of "RHSC DCN IHS Lothian Energy Model Input Data – Financial Close".

Another important parameter that has been considered regarding construction details is the glazing solar transmission value (g-value). The g-value is the sum of the direct and reflected solar radiation through glazing. The lower the g-value the lower the solar penetration. The g-value used in the model for north facing glazing (Block A) has a value of 0.64 and the remainder of the glazing on the other facades (south, east and west facing) uses glazing with a g-value of 0.5 (Block B).

3.2.3 Climatic Data

The facility performance has been calculated as it is exposed to climate, occupants and conditioning systems to produce predictions of the temperatures within the space. In order for these predictions to be as precise as possible it is vital that accurate weather data is selected for the simulation.

The simulation weather data used is CIBSE Edinburgh TRY weather file.

It must be noted that variations in weather conditions will have implications on the energy used within the facility. A severe winter is likely to result in increased heating demand on the facility.

3.2.4 Internal Conditions

The main building type has been modelled as a hospital. There are NCM (national calculation methodology) internal conditions available within the simulation that allows figures for the occupants, lighting, miscellaneous, auxiliary ventilation and infiltration rates to be applied to the building. The templates applied to each zone depends on the type of building and the activity within the space, as detailed in the electronic document of "RHSC DCN IHS Lothian Energy Model Input Data – Financial Close" and Appendix 4.4 'Energy Model Inputs Templates – Financial Close'

A detailed analysis was required to ascertain accurate data on the energy loads of the facility and many profiles were created to simulate "actual" internal conditions.

A profile details the time and diversity factor of the internal gain in question and has been used to simulate activity within a room, dependant on the day of the week.

3.3 Model geometry from Architectural information

The model is based on the architectural revit geometry.

The model geometry has been divided into two blocks as Block A and Block B, as shown in figures 1 and 2 in Section 1 of this document.

3.4 Establishing Operating Hours and Occupancy Factors

The hours of operation have been estimated by establishing the occupancy or operating hours of the facility and the way that the facility is to be managed. Consideration has been taken in terms of determining more realistic hours of occupation and the likely run-hours of the plant and equipment in the building e.g. extended hours of operation.

The results detailed in this schedule have been based on a combination of actual data, NCM values and a competent engineer's knowledge of building services, as detailed in the electronic document of 'RHSC DCN IHS Lothian Energy Model Input Data – Financial Close' and Appendix 4.4 Energy Model Inputs Templates – Financial Close.

3.5 Evaluating Internal Lighting Energy Use

Low energy light fittings and the lamp sources have been selected to meet the overall lighting design requirements. We have utilised Light Emitting Diodes (LED) sources within 50% of the luminaries with high efficiency T5 Eco lamps (except RA90 requirements) being used elsewhere. Project Co. lighting manufacturer has confirmed the internal lighting power density figures (W/m^2/100lux), provided for all room types are listed in the electronic document of 'RHSC DCN IHS Lothian Energy Model Input Data – Financial Close'

3.6 Evaluating Energy Use for External Lighting

The proposed external lighting scheme has been used to determine the number of light fittings. The total watts for the external lighting has been calculated based on the proposed light fittings detail. Refer to PCP document "Section 4.9 Mechanical & Electrical Engineering" for energy efficiency of the luminaires. To evaluate the likely number of hours that the lights shall operate over a given year we have used both the CIBSE Edinburgh Test Reference Year (TRY) and Design Summer Year (DSY) to determine the number of daylight hours for the year. This has been determined by analysing the sunrise and sunset hours. We have then calculated the total annual energy use for external lighting utilising this data. The calculation is detailed in the electronic document of "RHSC DCN IHS Lothian Operational Energy Model – Financial Close".

3.7 Evaluating Energy Use for Small Power

The small power energy allocation has been based on estimated load densities and operational hours. Small Power includes power utilised by small medical equipment, office equipment, communal small power (e.g. printers, TVs as well as refrigerators and vending machines). The figures are detailed in the electronic document of "RHSC DCN IHS Lothian Operational Energy Model – Financial Close".

3.8 Evaluating Energy Use of Domestic Hot Water

We have used figures from CIBSE Guide G Public Health Engineering (CIBSE, 2004) Table 2.10, which includes daily hot water use for various types of buildings. We have taken an average figure of 155 L/person/day based on the different mix of hospital building wards. This figure has been selected based on engineering knowledge and experience of similar projects. We have applied this daily DHW figure to the number of beds in the proposed facility. We have also allowed for catering DHW, with the assumption that 3 meals will be provided per day.

We have developed the DHW variation profile based on engineering judgement of how we expect the facilityto operate. Peak DHW usage is expected to occur during the morning and evenings when showers are assumed to be the peak DHW demand. The calculation and the developed variation profile is detailed in the electronic document of "RHSC DCN IHS Lothian Operational Energy Model – Financial Close".

3.9 Evaluating Energy Use for Catering

The proposed catering facilities will be all electric and we have been working with the catering supplier to evaluate the electrical energy use of the equipment. The figures are detailed in the electronic document of “RHSC DCN IHS Lothian Operational Energy Model – Financial Close”.

3.10 Evaluating Energy Use for Freezer Rooms

There are two freezer rooms within the Facility, each with a 5m floor area. The units shall have proprietary cooling equipment. We have evaluated the energy use based on the estimated freezer load and efficiency. The electronic document of “RHSC DCN IHS Lothian Operational Energy Model – Financial Close” details the calculation method we have employed to evaluate the energy use.

3.11 Evaluating Energy Use for Lifts

Close dialogue with the proposed lift manufacture has been conducted in order to evaluate the energy use of the lifts. The electronic document of “RHSC DCN IHS Lothian Operational Energy Model – Financial Close” details the calculation method we have employed to evaluate the energy use.

3.12 Evaluating Energy Use for Server Rooms

Generic loads have been utilised for plant sizing and are the basis of evaluating the energy use for Server Rooms detailed in the electronic document of “RHSC DCN IHS Lothian Operational Energy Model – Financial Close”.

3.13 Evaluating Energy Use MRI, CT Scanners/X-rays

The units will be provided with proprietary cooling equipment. Generic loads have been utilised for plant sizing and are the basis of evaluating the energy use.

3.14 Evaluating Energy Use of Space Heating, Cooling, Fans and Pumps

The internal conditions for the model allow figures for the occupants, lighting, miscellaneous, auxiliary ventilation and infiltration rates for the facility. The thermal template applied to each zone will depend on the room activity. The Energy Model calculates the energy consumption for space heating, cooling, fans and pumps. The electronic document of ‘RHSC DCN IHS Lothian Operational Energy Model – Financial Close’ details the model inputs.

3.15 Estimating Management Factors

The facility will be well managed, with the systems being well maintained, controls calibrated, energy saving features being applied and the energy use is being monitored and managed. In practice, there might be possible variations in operation that may result in higher energy use. Hence, an overall management factor can be applied to the results to give a representation of the energy use of the facility based on its management during its operation.

The table below details three different management characteristics that are assumed:

Table 5: Management Factors

Excellent Management	Average Management	Poor Management
1.00	1.05	1.10

3.16 Results

RHSC, Little France Financial Close: excellent management (Management Factor=1)

Heated Volume (100/m^3)	1066
Operational Energy Prediction Summary	
From Dynamic Thermal Model Results	Total MWh
Boilers Heating (MWh)	562.15
Boilers DHW (MWh)	89.86
Chillers (MWh)	12.58
Fans & Pumps (MWh)	1381.19
Heat Rejection Fans & Pumps (MWh)	6.09
PV Generated Electricity (MWh)	-97.73
CHP Gas Usage (MWh)	4731.95
CHP Generated Electricity (MWh)	-1892.78
Lights Electricity (MWh)	1459.86
Equipment Electricity (MWh)	5888.77
From spreadsheet calculation	
Lifts (MWh)	859.06
Catering (MWh)	1314.00
Freezer (MWh)	9.86
External Lighting (MWh)	88.20
Total gas consumption (MWh)	5383.95
Overall grid electricity (MWh)	1120.47
Target Delivered Energy Usage (GJ/m3)	55
Operational Energy Prediction (GJ/m^3)	49

1- Predicted CO2 emission from proposed building

1.1	Calculated CO2 emission rate from notional building	89.8 KgCO2/m2.annum
1.2	Improvement factor	0.51
1.3	LZC benchmark	0.15
1.4	Target CO2 Emission Rate (TER)	45.9 KgCO2/m2.annum
1.5	Building CO2 Emission Rate (BER)	31.1 KgCO2/m2.annum
1.6	Are emissions from building less than or equal to the target?	BER =< TER YES

2- The performance of the building fabric and the building services systems

2.1 How do the U-values compare with Section 6 guidance?

The building follows guidance in Scottish Building Regulations 2010

Element	$U_{a\text{-}Limit}$	$U_{a\text{-}Calc}$	$U_{i\text{-}Limit}$	$U_{i\text{-}Calc}$	Surface where this maximum value occurs*
Wall	0.27	0.2	0.7	0.2	TEMP0018:Surf[4]
Floor	0.22	0.2	0.7	0.2	1___0000:Surf[0]
Roof	0.2	0.15	0.35	0.15	3CRR0002:Surf[0]
Windows**, roof windows, and rooflights	2	1.83	3.3	2	3TRM0000:Surf[0]
Personnel doors	2	-	3.3	-	No Personnel doors in building
Vehicle access & similar large doors	1.5	-	1.5	-	No Vehicle access doors in building

$U_{a\text{-}Limit}$ = Limiting area-weighted average U-values [W/(m2K)]
$U_{a\text{-}Calc}$ = Calculated area-weighted average U-values [W/(m2K)]
$U_{i\text{-}Limit}$ = Limiting individual element U-values [W/(m2K)]
$U_{i\text{-}Calc}$ = Calculated individual element U-values [W/(m2K)]

* There might be more than one surface exceeding the limiting standards.
** Display windows and similar glazing are not required to meet the standard given in this table.

2.2 Air permeability

Air Permeability	This building's value
m3/(h.m2) at 50 Pa	5

2.b Building services

The building services parameters listed below are expected to be checked by the BCO against guidance. No automatic checking is performed by the tool.

Whole building lighting automatic monitoring & targeting with alarms for out-of-range values	YES
Whole building electric power factor achieved by power factor correction	>0.95

1- 02_Radiant_Panels+Nat_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	-	0
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

2- 01_Radiant_Panels+Central_Mech_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	-	0
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

3- 03_Radiant_Panels+Zonal_Extract

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	-	0
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

4- 04_All_Air_System_Central_Mech_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	3.35	1.5
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

5- 05_Ceiling_Cassette+Central_Mech_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	3.35	1.5
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

"No HWS in project, or hot water is provided by HVAC system"

Technical Data Sheet (Actual vs. Notional Building)

Building Global Parameters

	Actual	Notional
Area [m²]	9677	9677
External area [m²]	10626.9	10626.9
Weather	GLA	GLA
Infiltration [m³/hm²@ 50Pa]	5	10
Average conductance [W/K]	3831.63	0
Average U-value [W/m²K]	0.36	0
Alpha value* [%]	8.18	10

* Percentage of the building's average heat transfer coefficient which is due to thermal bridging

Building Use

% Area	Building Type
	Retail/Financial and Professional services
	Restaurants and Cafes/Drinking Est./Takeaways
	Offices and Workshop businesses
	General Industrial and Special Industrial Groups
	Storage or Distribution
	Hotels
100	**Residential Inst.: Hospitals and Care Homes**
	Residential Inst.: Residential schools
	Residential Inst.: Universities and colleges
	Secure Residential Inst.
	Residential spaces
	Non-residential Inst.: Community/Day Centre
	Non-residential Inst.: Libraries, Museums, and Galleries
	Non-residential Inst.: Education
	Non-residential Inst.: Primary Health Care Building
	Non-residential Inst.: Crown and County Courts
	General Assembly and Leisure, Night Clubs and Theatres
	Others: Passenger terminals
	Others: Emergency services
	Others: Miscellaneous 24hr activities
	Others: Car Parks 24 hrs
	Others - Stand alone utility block

Energy Consumption by End Use [kWh/m²]

	Actual	Notional
Heating	76.51	150.54
Cooling	3.07	3.06
Auxiliary	26.05	34.94
Lighting	41.87	60.12
Hot water	81.74	45.71
Equipment*	80.71	81.63
TOTAL**	**162.99**	**294.37**

* Energy used by equipment does not count towards the total for calculating emissions.
** Total is net of any electrical energy displaced by CHP generators, if applicable.

Energy Production by Technology [kWh/m²]

	Actual	Notional
Photovoltaic systems	3.57	0
Wind turbines	0	0
CHP generators	66.25	0
Solar thermal systems	0	0

Energy & CO_2 Emissions Summary

	Actual	Indicative Target
Heating + cooling demand [MJ/m²]	151.08	224.07
Primary energy* [kWh/m²]	175.26	248.76
Total emissions [kg/m²]	31.1	45.9

* Primary energy is net of any electrical energy displaced by CHP generators, if applicable.

Key to terms

Heat dem [MJ/m2]	= Heating energy demand
Cool dem [MJ/m2]	= Cooling energy demand
Heat con [kWh/m2]	= Heating energy consumption
Cool con [kWh/m2]	= Cooling energy consumption
Aux con [kWh/m2]	= Auxiliary energy consumption
Heat SSEFF	= Heating system seasonal efficiency
Cool SSEER	= Cooling system seasonal energy efficiency ratio
Heat gen SSEFF	= Heating generator seasonal efficiency
Cool gen SSEER	= Cooling generator seasonal energy efficiency ratio
ST	= System type
HS	= Heat source
HFT	= Heating fuel type
CFT	= Cooling fuel type

Apache Specification Information

Scottish Building Regulations 2010 Section 6 Guidance
Carbon Dioxide Emissions, U-Values, Air Permeability, and HVAC

Project name

Block_B_Section_6_sim000

Date: Mon Aug 25 16:00:39 2014

Administrative information

Building Details

Address: Address 1, City, Postcode

Certification tool

Calculation engine: Apache

Calculation engine version: 6.4.0.12

Interface to calculation engine: IES Virtual Environment

Interface to calculation engine version: 6.4.0.12

Compliance check version: v4.1.e.5

Owner Details

Name: Name

Telephone number: Phone

Address: Street Address, City, Postcode

Agent details

Name: Name

Telephone number: Phone

Address: Street Address, City, Postcode

1- Predicted CO2 emission from proposed building

1.1	Calculated CO2 emission rate from notional building	72.6 KgCO2/m2.annum
1.2	Improvement factor	0.52
1.3	LZC benchmark	0.15
1.4	Target CO2 Emission Rate (TER)	37.4 KgCO2/m2.annum
1.5	Building CO2 Emission Rate (BER)	27 KgCO2/m2.annum
1.6	Are emissions from building less than or equal to the target?	BER =< TER YES

2- The performance of the building fabric and the building services systems

2.1 How do the U-values compare with Section 6 guidance?

The building does not follow guidance in Scottish Building Regulations 2010

Element	$U_{a\text{-}Limit}$	$U_{a\text{-}Calc}$	$U_{i\text{-}Limit}$	$U_{i\text{-}Calc}$	Surface where this maximum value occurs*
Wall	0.27	0.2	0.7	0.2	BDRM0000:Surf[3]
Floor	0.22	0.2	0.7	0.2	BDRM0000:Surf[0]
Roof	0.2	0.15	0.35	0.15	FLTB0001:Surf[0]
Windows**, roof windows, and rooflights	2	1.6	3.3	1.6	BDRM0000:Surf[1]
Personnel doors	2	2.19	3.3	2.19	CRCL0309:Surf[1]
Vehicle access & similar large doors	1.5	-	1.5	-	No Vehicle access doors in building

$U_{a\text{-}Limit}$ = Limiting area-weighted average U-values [W/(m2K)]
$U_{a\text{-}Calc}$ = Calculated area-weighted average U-values [W/(m2K)]
$U_{i\text{-}Limit}$ = Limiting individual element U-values [W/(m2K)]
$U_{i\text{-}Calc}$ = Calculated individual element U-values [W/(m2K)]

* There might be more than one surface exceeding the limiting standards.
** Display windows and similar glazing are not required to meet the standard given in this table.

2.2 Air permeability

Air Permeability	This building's value
m3/(h.m2) at 50 Pa	5

2.b Building services

The building services parameters listed below are expected to be checked by the BCO against guidance. No automatic checking is performed by the tool.

Whole building lighting automatic monitoring & targeting with alarms for out-of-range values	YES
Whole building electric power factor achieved by power factor correction	>0.95

1- 01_Radiant_Panels+Central_Mech_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	-	0
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

2- 04_All_Air_System_Central_Mech_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	3.35	1.5
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

3- 03_Radiant_Panels+Zonal_Extract

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	-	0
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

4- 02_Radiant_Panels+Nat_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	-	0
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

5- 05_Ceiling_Cassette+Central_Mech_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	3.35	1.5
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

"No HWS in project, or hot water is provided by HVAC system"

Technical Data Sheet (Actual vs. Notional Building)

Building Global Parameters

	Actual	Notional
Area [m²]	38712	38712
External area [m²]	37745.3	37745.3
Weather	GLA	GLA
Infiltration [m³/hm²@ 50Pa]	5	10
Average conductance [W/K]	9692.19	16031.6
Average U-value [W/m²K]	0.26	0.42
Alpha value* [%]	12.81	10

* Percentage of the building's average heat transfer coefficient which is due to thermal bridging

Building Use

% Area	Building Type
	Retail/Financial and Professional services
	Restaurants and Cafes/Drinking Est./Takeaways
	Offices and Workshop businesses
	General Industrial and Special Industrial Groups
	Storage or Distribution
	Hotels
100	**Residential Inst.: Hospitals and Care Homes**
	Residential Inst.: Residential schools
	Residential Inst.: Universities and colleges
	Secure Residential Inst.
	Residential spaces
	Non-residential Inst.: Community/Day Centre
	Non-residential Inst.: Libraries, Museums, and Galleries
	Non-residential Inst.: Education
	Non-residential Inst.: Primary Health Care Building
	Non-residential Inst.: Crown and County Courts
	General Assembly and Leisure, Night Clubs and Theatres
	Others: Passenger terminals
	Others: Emergency services
	Others: Miscellaneous 24hr activities
	Others: Car Parks 24 hrs
	Others - Stand alone utility block

Energy Consumption by End Use [kWh/m²]

	Actual	Notional
Heating	53.42	88.93
Cooling	5.85	6.81
Auxiliary	18.02	22.48
Lighting	35.19	52.04
Hot water	71.64	65.54
Equipment*	116.18	116.18
TOTAL**	**132.5**	**235.8**

* Energy used by equipment does not count towards the total for calculating emissions.
** Total is net of any electrical energy displaced by CHP generators, if applicable.

Energy Production by Technology [kWh/m²]

	Actual	Notional
Photovoltaic systems	1.79	0
Wind turbines	0	0
CHP generators	51.63	0
Solar thermal systems	0	0

Energy & CO_2 Emissions Summary

	Actual	Indicative Target
Heating + cooling demand [MJ/m²]	143.73	150.7
Primary energy* [kWh/m²]	149.27	203.5
Total emissions [kg/m²]	27	37.4

* Primary energy is net of any electrical energy displaced by CHP generators, if applicable.

HVAC Systems Performance

System Type		Heat dem MJ/m2	Cool dem MJ/m2	Heat con kWh/m2	Cool con kWh/m2	Aux con kWh/m2	Heat SSEEF	Cool SSEER	Heat gen SEFF	Cool gen SEER

	Actual	4.1	648.8	0.6	67.3	100.1	0.7	2.61	0.97	4.09
	Notional	537	520.6	179.8	78	100.2	0.83	1.86	----	----

Key to terms

Heat dem [MJ/m2]	= Heating energy demand
Cool dem [MJ/m2]	= Cooling energy demand
Heat con [kWh/m2]	= Heating energy consumption
Cool con [kWh/m2]	= Cooling energy consumption
Aux con [kWh/m2]	= Auxiliary energy consumption
Heat SSEFF	= Heating system seasonal efficiency
Cool SSEER	= Cooling system seasonal energy efficiency ratio
Heat gen SSEFF	= Heating generator seasonal efficiency
Cool gen SSEER	= Cooling generator seasonal energy efficiency ratio
ST	= System type
HS	= Heat source
HFT	= Heating fuel type
CFT	= Cooling fuel type

4.2 Scottish EPC

Energy Performance Certificate for buildings other than dwellings

Building Energy Performance — Scotland

Energy Performance Certificate

Calculated asset rating using Virtual Environment v6.4.0 [ApacheSim]	Building type Hospitals/Care Home	Current rating

Excellent

C+

Very Poor

Carbon Dioxide Emissions The number refers to the calculated carbon dioxide emissions in terms of kg per m² of floor area per year	31
Approximate current energy use per m² of floor area:	163 kWh/m²

Main heating fuel: Natural Gas
Building Services: Heating with Mech. Vent.
Renewable energy source: CHP generators
Electricity: Grid supplied

Carbon Dioxide is a greenhouse gas which contributes to climate change.
Less Carbon Dioxide emissions from buildings helps the environment.

Benchmarks

A building of this type built to building regulations standards current at the date of issue of this certificate would have a rating:	46	D+
Where the accompanying recommendations for the cost effective improvement of energy performance are applied, this building would have a rating:	0	??

Recommendations for the cost-effective improvement (lower cost measures) of the energy performance

Address: Block_A_Scottish_EPC_sim000, City, Postcode
Conditioned area (m²): 9676.982
Name of protocol organisation: CIBSE Certification Ltd, [ABCD123456]
Date of issue of certificate: 25 Aug 2014 (Valid for a period not exceeding 10 years)

This certificate is a requirement of EU Directive 2002/91/EC on the energy performance of buildings.

NB THIS CERTIFICATE MUST BE AFFIXED TO THE BUILDING AND NOT REMOVED UNLESS REPLACED WITH AN UPDATED VERSION AND FOR PUBLIC BUILDINGS DISPLAYED IN A PROMINENT PLACE

A43133429

Energy Performance Certificate for buildings other than dwellings

Energy Performance Certificate

Building Energy Performance — Scotland

Calculated asset rating using Virtual Environment v6.4.0 [ApacheSim]	Building type Hospitals/Care Home	Current rating

Excellent

B

Very Poor

Carbon Dioxide Emissions The number refers to the calculated carbon dioxide emissions in terms of kg per m² of floor area per year	27
Approximate current energy use per m² of floor area:	132 kWh/m²

Main heating fuel: Natural Gas
Building Services: Heating with Mech. Vent.
Renewable energy source: CHP generators
Electricity: Grid supplied

Carbon Dioxide is a greenhouse gas which contributes to climate change.
Less Carbon Dioxide emissions from buildings helps the environment.

Benchmarks

A building of this type built to building regulations standards current at the date of issue of this certificate would have a rating:	37	C+
Where the accompanying recommendations for the cost effective improvement of energy performance are applied, this building would have a rating:	0	??

Recommendations for the cost-effective improvement (lower cost measures) of the energy performance

Address: Block_B_Scottish_EPC_sim000, Address 1, Address 2, City, Postcode
Conditioned area (m²): 38711.984
Name of protocol organisation: CIBSE Certification Ltd, [ABCD123456]
Date of issue of certificate: 25 Aug 2014 (Valid for a period not exceeding 10 years)

This certificate is a requirement of EU Directive 2002/91/EC on the energy performance of buildings.

NB THIS CERTIFICATE MUST BE AFFIXED TO THE BUILDING AND NOT REMOVED UNLESS REPLACED WITH AN UPDATED VERSION AND FOR PUBLIC BUILDINGS DISPLAYED IN A PROMINENT PLACE

A43133429

4.3 Edinburgh Standards for Sustainable Buildings S1 Form

Form S1

·EDINBVRGH·
THE CITY OF EDINBURGH COUNCIL

FOR OFFICIAL USE ONLY
Reference No :
Registration Date :

Sustainability Statement Form

To accompany all applications for planning permission apart from alterations and extensions to existing domestic properties.

PLEASE REFER TO NOTES FOR GUIDANCE

Part A – must be completed for all applications for new development (pages 1 & 2)
Part B – Major applications only

1 APPLICANT'S DETAILS

NAME INTEGRATED HEALTH SOLUTIONS LOTHIAN
ADDRESS RHSC & DCN PROJECT OFFICE
56 CANAAN LANE
POSTCODE EDINBURGH EH10 4SG

2 AGENT'S DETAILS

NAME IRONSIDE FARRAR LTD
ADDRESS 111 McDONALD ROAD
EDINBURGH
POSTCODE EH7 4NW

3 CONTACT DETAILS

NAME [redacted]
TELEPHONE [redacted] E-MAIL [redacted]

4 DESCRIPTION OF PROPOSED DEVELOPMENT *please specify what is being proposed*

RE-PROVISION OF THE ROYAL HOSPITAL FOR SICK CHILDREN AND DEPARTMENT OF CLINICAL NEUROSCIENCES AT LITTLE FRANCE

DECLARATION

I hereby certify that the information given by me in this form is true and accurate to the best of my knowledge.

Signature of ~~Applicant~~ / Agent (delete as appropriate) [redacted]

Date [redacted] 09 MAY 2014

1

A43133429

Edinburgh Standards for Sustainable Building S1 Form

Part A – Carbon Reduction Declaration (all new developments apart from domestic alterations and extensions and change of use for local developments)

Question	Response
Q1: Does the proposal include any Low and Zero Carbon Equipment to meet the requirements of Section 6 (energy) of the Building Standards 2010? Yes/No (if no, please explain)	Yes.
Q2: Has the proposed equipment been clearly marked on plans submitted with the planning application? Yes/No (if no, please explain)	Yes
Please describe the type of Low and Zero Carbon equipment that the application includes.	Solar photovoltaic's Gas Combined Heat and Power (CHP)

Part B – Sustainable Development (Major Developments only)

Section 1 - Energy needs have been minimised through a combination of design for energy efficiency and the incorporation of low or zero carbon equipment

Essential Requirements

Principle	Question	Response / Notes
Achieving carbon reduction	The proposed development must meet the requirements of Section 6 of the Building Standards.	Yes. Refer to Sustainability Statement.
Developing in sustainable locations.	The proposed development should be located on brownfield land, be allocated within the ECLP or be covered by an approved Masterplan, development brief or framework.	The development is on land designated for health use, part of the Edinburgh Bio-quarter and South East Wedge Parkland masterplan.

Desirable Requirements

Principle	Question	Response / Notes
Working towards net zero carbon emissions.	Developments that go beyond the 30% carbon reduction requirements within the Building Standards will be rewarded for doing so on a sliding scale.	The development is designed to achieve Section 7 (Scottish Building Standards) Aspect Silver 1 which is a minimum 21.4% improvement on the 2010 Building Standards.
Utilising low and zero carbon technologies.	Developments that include low and zero carbon technologies to meet or go beyond the carbon reduction requirements with the Building Standards will be rewarded.	The development includes solar photovoltaic's and gas Combined Heat and Power (CHP).

Achieving sustainability accreditation/ award.	Development scores very good or equivalent.	The development is designed to achieve a BREEAM New Construction 2011 'Very Good' rating.
Promoting passive design.	Has the design of the site been evaluated for passive gain? E.g. solar, layout, access.	The development has been assessed using best practice IES thermal modelling software.
Supporting decentralised and renewable energy for excess energy generation to be supplied to the national grid.	Has provision been made for excess energy generation to be supplied to the national grid? This can include making allowances for householders / occupants to install microgeneration technologies or connect to a CHP system.	The development has the potential to export excess electrical for the gas CHP plant to the national grid.
Support sustainable transport.	Does the development provide city car club spaces, bus stops, contribute to public transport or provide electric car hook ups.	The development supports green travel through a site specific travel plan (in accordance with BREEAM) and encourages the use of sustainable transport methods with the inclusion of adjacent bus stops, a site wide cycle path, and cycle parking provision.

Section 2 - Measures to promote water conservation

Essential Requirements

Principle	Question	IHS Lothian Response
Reduce water use.	100% of devices must be water saving, i.e dual flush toilets.	The development includes low flow water fixtures throughout in accordance with BREEAM credit Wat 1 (Water consumption) Level 2 appliances and fixtures.

Desirable Requirements

Principle	Question	IHS Lothian Response
Conserve and re-use water.	Rainwater harvesting for use on site.	Rainwater harvesting is not included within the scheme.

Section 3 - Measures that will ensure that there will be no increase in rate of surface water run-off in peak conditions

Essential Requirements

Principle	Question	IHS Lothian Response
Providing attenuation of surface water.	A SUDs system or a Surface Water Management Plan must be submitted.	Discharge off site is restricted to green-field rates. The SUDs system provides attenuation for up to the 1 in 200 year storm event plus climate change (assuming 100% impermeable site area). Additional storage is provided in dished areas on surface away from the building.

Desirable Requirements

Principle	Question	IHS Lothian Response
Supporting innovation in surface run off design.	Inclusion of green roofs or living walls.	Green roofs are proposed as part of the development over the CAMHS unit and within internal courtyard roofs. In addition strategically located rain gardens provide additional ecological and bio-diversity benefits as well as attenuation and treatment of surface run-off.

Section 4 – Provision of facilities to encourage recycling

Essential Requirements

Principle	Question	IHS Lothian Response
Reduce, reuse, recycle.	Include waste management plan or confirm commitment to recycling.	Dedicated space is provided for the segregation and storage of operational recyclable waste (both within basement area and service yard areas). The facility is located to allow ease of access by building users, and for ease of collection.

Desirable Requirements

Principle	Question	IHS Lothian Response
Provide facilities to compost Household waste.	Provide facilities to home compost household waste by means of separated dedicated storage space.	N/A
Neighbourhood recycling.	Provide one local communal recycling point per 100 properties in consultation with Waste Services.	N/A

Section 5 – Maximum use of materials from local and/or sustainable sources.

Essential Requirements

Principle	Question	IHS Lothian Response
Use of sustainable materials.	Materials selected must be sustainable and evidence provided. For example, all timber must be FSC labelled or certified alternative.	The key building materials have been selected with reference to the Green Guide to Specification, and A or A+ rated materials have been adopted where practical.
Reducing the use of uPVC	An alternative to uPVC must be used for all window.	No uPVC windows are being used.
Promoting recycled materials and reducing site waste.	At least 10% of materials come from a recycled source. This can include reuse of buildings on site for construction purposes.	It is intended that greater than 10% of materials will be from a recycled source.

Desirable Requirements

Principle	Question	IHS Lothian Response
Use of sustainable timber	No tropical hardwood used on site; and, or all timber is from a local source.	No tropical hardwood is being used. It is the intention that all timber is specified to be from an FSC (or equivalent) credited source.

4.5 BREEAM Ene01 Compliance Checker Calculator

bre BREEAM

BREEAM New Construction 2011 Ene01 Compliance Checker

Project ID: 140827043548:30677
BREEAM Assessment Reference Number:

BRUKL purpose: E&W

Energy & CO_2 Emissions Summary		
	Actual Performance	Indicative Target
Heating + Cooling demand [MJ/m²]	140.02	141.89
Primary Energy [kWh/m²]	160.34	185.68
Total CO_2 emissions [kgCO_2/m²]	26.2	35.5

BREEAM New Construction 2011: Ene01 results	
EPR-Energy Demand:	0.0177
EPR-Primary Energy:	0.3359
EPR-CO_2 Emissions:	0.1995
Overall Energy Performance Ratio (EPR_{tc}):	0.5531
Number of BREEAM Ene01 credits achieved:	9

Minimum Standards		
Target	Minimum Requirement - CO_2 emissions	Achieved?
1 or more credits	BER better than TER	Yes
BREEAM Excellent Rating	25% reduction in CO_2 emissions	Yes
BREEAM Outstanding Rating	40% reduction in CO_2 emissions	No
15 credits	100% reduction in CO_2 emissions	No

The generated Energy & CO_2 Emissions outputs should be entered in to the separate 2011 version of the BREEAM Assessors Ene01 calculator or the Pre-Assessment Estimator.

Note:
Please make a record of the ID number (140827043548:30677) and save or print a copy of this page and keep as part of the evidence file for the BREEAM assessment of this project.

4.6 Part L2A 2010 Compliance BRUKL

BRUKL Output Document

HM Government

Compliance with England and Wales Building Regulations Part L 2010

Project name

Block_A_Part_L_sim000

As designed

Date: Mon Aug 25 22:15:54 2014

Building Details

Address: City, Postcode

Certification tool

Calculation engine: Apache

Calculation engine version: 6.4.0.12

Interface to calculation engine: IES Virtual Environment

Interface to calculation engine version: 6.4.0.12

BRUKL compliance check version: v4.1.e.5

Owner Details

Name: Name

Telephone number: Phone

Address: Street Address, City, Postcode

Certifier details

Name: Name

Telephone number: Phone

Address: Street Address, City, Postcode

Criterion 1: The calculated CO_2 emission rate for the building should not exceed the target

1.1	CO_2 emission rate from the notional building, $kgCO_2/m^2.annum$	39
1.2	Target CO_2 emission rate (TER), $kgCO_2/m^2.annum$	39
1.3	Building CO_2 emission rate (BER), $kgCO_2/m^2.annum$	30.1
1.4	Are emissions from the building less than or equal to the target?	BER =< TER
1.5	Are as built details the same as used in the BER calculations?	Separate submission

Criterion 2: The performance of the building fabric and the building services should achieve reasonable overall standards of energy efficiency

2.a Building fabric

Element	$U_{a\text{-}Limit}$	$U_{a\text{-}Calc}$	$U_{i\text{-}Calc}$	Surface where the maximum value occurs*
Wall**	0.35	0.2	0.2	TEMP0018:Surf[4]
Floor	0.25	0.2	0.2	1___0000:Surf[0]
Roof	0.25	0.15	0.15	3CRR0002:Surf[0]
Windows***, roof windows, and rooflights	2.2	1.83	2	3TRM0000:Surf[0]
Personnel doors	2.2	-	-	No Personnel doors in building
Vehicle access & similar large doors	1.5	-	-	No Vehicle access doors in building
High usage entrance doors	3.5	-	-	No High usage entrance doors in building

$U_{a\text{-}Limit}$ = Limiting area-weighted average U-values [$W/(m^2K)$]
$U_{a\text{-}Calc}$ = Calculated area-weighted average U-values [$W/(m^2K)$]
$U_{i\text{-}Calc}$ = Calculated maximum individual element U-values [$W/(m^2K)$]

* There might be more than one surface where the maximum U-value occurs.
** Automatic U-value check by the tool does not apply to curtain walls whose limiting standard is similar to that for windows.
*** Display windows and similar glazing are excluded from the U-value check.
N.B.: Neither roof ventilators (inc. smoke vents) nor swimming pool basins are modelled or checked against the limiting standards by the tool.

Air Permeability	Worst acceptable standard	This building
$m^3/(h.m^2)$ at 50 Pa	10	5

2.b Building services

The building services parameters listed below are expected to be checked by the BCO against guidance. No automatic checking is performed by the tool.

Whole building lighting automatic monitoring & targeting with alarms for out-of-range values	YES
Whole building electric power factor achieved by power factor correction	>0.95

1- 02_Radiant_Panels+Nat_Vent

Heating seasonal efficiency	Cooling nominal efficiency	SFP [W/(l/s)]	HR seasonal efficiency
0.97	-	0	-
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

2- 01_Radiant_Panels+Central_Mech_Vent

Heating seasonal efficiency	Cooling nominal efficiency	SFP [W/(l/s)]	HR seasonal efficiency
0.97	-	0	0.6
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

3- 03_Radiant_Panels+Zonal_Extract

Heating seasonal efficiency	Cooling nominal efficiency	SFP [W/(l/s)]	HR seasonal efficiency
0.97	-	0	-
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

4- 04_All_Air_System_Central_Mech_Vent

Heating seasonal efficiency	Cooling nominal efficiency	SFP [W/(l/s)]	HR seasonal efficiency
0.97	3.35	1.5	0.6
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

5- 05_Ceiling_Cassette+Central_Mech_Vent

Heating seasonal efficiency	Cooling nominal efficiency	SFP [W/(l/s)]	HR seasonal efficiency
0.97	3.35	1.5	0.6
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

"No HWS in project, or hot water is provided by HVAC system"

Criterion 4: The performance of the building, as built, should be consistent with the BER

Separate submission

Criterion 5: The necessary provisions for enabling energy-efficient operation of the building should be in place

Separate submission

EPBD (Recast): Consideration of alternative energy systems

Were alternative energy systems considered and analysed as part of the design process?	NO
Is evidence of such assessment available as a separate submission?	NO
Are any such measures included in the proposed design?	NO

Technical Data Sheet (Actual vs. Notional Building)

Building Global Parameters

	Actual	Notional
Area [m²]	9677	9677
External area [m²]	10626.9	10626.9
Weather	EDI	EDI
Infiltration [m³/hm²@ 50Pa]	5	5
Average conductance [W/K]	3831.63	0
Average U-value [W/m²K]	0.36	0
Alpha value* [%]	8.18	10

* Percentage of the building's average heat transfer coefficient which is due to thermal bridging

Building Use

% Area	Building Type
	A1/A2 Retail/Financial and Professional services
	A3/A4/A5 Restaurants and Cafes/Drinking Est./Takeaways
	B1 Offices and Workshop businesses
	B2 to B7 General Industrial and Special Industrial Groups
	B8 Storage or Distribution
	C1 Hotels
100	**C2 Residential Inst.: Hospitals and Care Homes**
	C2 Residential Inst.: Residential schools
	C2 Residential Inst.: Universities and colleges
	C2A Secure Residential Inst.
	Residential spaces
	D1 Non-residential Inst.: Community/Day Centre
	D1 Non-residential Inst.: Libraries, Museums, and Galleries
	D1 Non-residential Inst.: Education
	D1 Non-residential Inst.: Primary Health Care Building
	D1 Non-residential Inst.: Crown and County Courts
	D2 General Assembly and Leisure, Night Clubs and Theatres
	Others: Passenger terminals
	Others: Emergency services
	Others: Miscellaneous 24hr activities
	Others: Car Parks 24 hrs
	Others - Stand alone utility block

Energy Consumption by End Use [kWh/m²]

	Actual	Notional
Heating	73.66	45.34
Cooling	3.04	1.04
Auxiliary	26.02	17.29
Lighting	39.77	30.7
Hot water	81.8	23.44
Equipment*	80.71	80.71
TOTAL**	**159.08**	**117.82**

* Energy used by equipment does not count towards the total for calculating emissions.
** Total is net of any electrical energy displaced by CHP generators, if applicable.

Energy Production by Technology [kWh/m²]

	Actual	Notional
Photovoltaic systems	3.37	0
Wind turbines	0	0
CHP generators	65.2	0
Solar thermal systems	0	0

Energy & CO_2 Emissions Summary

	Actual	Indicative Target
Heating + cooling demand [MJ/m²]	145.94	150.68
Primary energy* [kWh/m²]	169.14	213.35
Total emissions [kg/m²]	30.1	39

* Primary energy is net of any electrical energy displaced by CHP generators, if applicable.

HVAC Systems Performance

System Type		Heat dem MJ/m2	Cool dem MJ/m2	Heat con kWh/m2	Cool con kWh/m2	Aux con kWh/m2	Heat SSEEF	Cool SSEER	Heat gen SEFF	Cool gen SEER

	Actual	80.5	0	0.2	0	15.7	0.91	0	0.97	0
	Notional	90.1	0	30	0	15.7	0.83	0	----	----

Key to terms

Heat dem [MJ/m2] = Heating energy demand
Cool dem [MJ/m2] = Cooling energy demand
Heat con [kWh/m2] = Heating energy consumption
Cool con [kWh/m2] = Cooling energy consumption
Aux con [kWh/m2] = Auxiliary energy consumption
Heat SSEFF = Heating system seasonal efficiency (for notional building, value depends on activity glazing class)
Cool SSEER = Cooling system seasonal energy efficiency ratio
Heat gen SSEFF = Heating generator seasonal efficiency
Cool gen SSEER = Cooling generator seasonal energy efficiency ratio
ST = System type
HS = Heat source
HFT = Heating fuel type
CFT = Cooling fuel type

Key Features

The BCO can give particular attention to items with specifications that are better than typically expected.

Building fabric

Element	$U_{i\text{-}Typ}$	$U_{i\text{-}Min}$	Surface where the minimum value occurs*
Wall	0.23	0.2	TEMP0018:Surf[4]
Floor	0.2	0.2	1___0000:Surf[0]
Roof	0.15	0.15	3CRR0002:Surf[0]
Windows, roof windows, and rooflights	1.5	1.6	TEMP0018:Surf[0]
Personnel doors	1.5	-	No Personnel doors in building
Vehicle access & similar large doors	1.5	-	No Vehicle access doors in building
High usage entrance doors	1.5	-	No High usage entrance doors in building

$U_{i\text{-}Typ}$ = Typical individual element U-values [W/(m²K)] $U_{i\text{-}Min}$ = Minimum individual element U-values [W/(m²K)]

* There might be more than one surface where the minimum U-value occurs.

Air Permeability	Typical value	This building
m³/(h.m²) at 50 Pa	5	5

BRUKL Output Document

HM Government

Compliance with England and Wales Building Regulations Part L 2010

Project name

Block_B_Part_L_sim000

As designed

Date: Tue Aug 26 03:04:45 2014

Administrative information

Building Details

Address: Address 1, City, Postcode

Certification tool

Calculation engine: Apache

Calculation engine version: 6.4.0.12

Interface to calculation engine: IES Virtual Environment

Interface to calculation engine version: 6.4.0.12

BRUKL compliance check version: v4.1.e.5

Owner Details

Name: Name

Telephone number: Phone

Address: Street Address, City, Postcode

Certifier details

Name: Name

Telephone number: Phone

Address: Street Address, City, Postcode

Criterion 1: The calculated CO_2 emission rate for the building should not exceed the target

1.1	CO_2 emission rate from the notional building, $kgCO_2/m^2.annum$	35.5
1.2	Target CO_2 emission rate (TER), $kgCO_2/m^2.annum$	35.5
1.3	Building CO_2 emission rate (BER), $kgCO_2/m^2.annum$	26.2
1.4	Are emissions from the building less than or equal to the target?	BER =< TER
1.5	Are as built details the same as used in the BER calculations?	Separate submission

Criterion 2: The performance of the building fabric and the building services should achieve reasonable overall standards of energy efficiency

2.a Building fabric

Element	$U_{a\text{-}Limit}$	$U_{a\text{-}Calc}$	$U_{i\text{-}Calc}$	Surface where the maximum value occurs*
Wall**	0.35	0.2	0.2	BDRM0000:Surf[3]
Floor	0.25	0.2	0.2	BDRM0000:Surf[0]
Roof	0.25	0.15	0.15	FLTB0001:Surf[0]
Windows***, roof windows, and rooflights	2.2	1.6	1.6	BDRM0000:Surf[1]
Personnel doors	2.2	2.19	2.19	CRCL0309:Surf[1]
Vehicle access & similar large doors	1.5	-	-	No Vehicle access doors in building
High usage entrance doors	3.5	-	-	No High usage entrance doors in building

$U_{a\text{-}Limit}$ = Limiting area-weighted average U-values [$W/(m^2K)$]
$U_{a\text{-}Calc}$ = Calculated area-weighted average U-values [$W/(m^2K)$]
$U_{i\text{-}Calc}$ = Calculated maximum individual element U-values [$W/(m^2K)$]

* There might be more than one surface where the maximum U-value occurs.
** Automatic U-value check by the tool does not apply to curtain walls whose limiting standard is similar to that for windows.
*** Display windows and similar glazing are excluded from the U-value check.
N.B.: Neither roof ventilators (inc. smoke vents) nor swimming pool basins are modelled or checked against the limiting standards by the tool.

Air Permeability	Worst acceptable standard	This building
$m^3/(h.m^2)$ at 50 Pa	10	5

2.b Building services

The building services parameters listed below are expected to be checked by the BCO against guidance. No automatic checking is performed by the tool.

Whole building lighting automatic monitoring & targeting with alarms for out-of-range values	YES
Whole building electric power factor achieved by power factor correction	>0.95

1- 01_Radiant_Panels+Central_Mech_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**SFP [W/(l/s)]**	**HR seasonal efficiency**
0.97	-	0	0.6
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

2- 04_All_Air_System_Central_Mech_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**SFP [W/(l/s)]**	**HR seasonal efficiency**
0.97	3.35	1.5	0.6
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

3- 03_Radiant_Panels+Zonal_Extract

Heating seasonal efficiency	**Cooling nominal efficiency**	**SFP [W/(l/s)]**	**HR seasonal efficiency**
0.97	-	0	-
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

4- 02_Radiant_Panels+Nat_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**SFP [W/(l/s)]**	**HR seasonal efficiency**
0.97	-	0	-
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

5- 05_Ceiling_Cassette+Central_Mech_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**SFP [W/(l/s)]**	**HR seasonal efficiency**
0.97	3.35	1.5	0.6
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

"No HWS in project, or hot water is provided by HVAC system"

Key to terms

Heat dem [MJ/m2] = Heating energy demand
Cool dem [MJ/m2] = Cooling energy demand
Heat con [kWh/m2] = Heating energy consumption
Cool con [kWh/m2] = Cooling energy consumption
Aux con [kWh/m2] = Auxiliary energy consumption
Heat SSEFF = Heating system seasonal efficiency (for notional building, value depends on activity glazing class)
Cool SSEER = Cooling system seasonal energy efficiency ratio
Heat gen SSEFF = Heating generator seasonal efficiency
Cool gen SSEER = Cooling generator seasonal energy efficiency ratio
ST = System type
HS = Heat source
HFT = Heating fuel type
CFT = Cooling fuel type

Key Features

The BCO can give particular attention to items with specifications that are better than typically expected.

$U_{i\text{-}Typ}$ = Typical individual element U-values [W/(m²K)] $U_{i\text{-}Min}$ = Minimum individual element U-values [W/(m²K)]

* There might be more than one surface where the minimum U-value occurs.

Air Permeability	Typical value	This building
m³/(h.m²) at 50 Pa	5	5

4.7 Future Actions

The following details the future action for the development of the Energy Model during the detail design and construction stage:

- Update the geometry
- Update design information
- Simulate for building regulation compliance, check BREEAM Ene01
- Simulate the operational energy model

4.8 CHP Utilisation Strategy

4.8.1 Introduction

This document describes the operational strategy for the new CHP unit installed as part of the overall energy producing plant at the new facility. The strategy being to arrange the plant integration into the Energy supplies of the building to achieve maximum possible usage and hence effectiveness of the CHP unit.

4.8.2 Current Plant Proposals

The CHP unit is designed to be the lead heat provider with boilerplant utilised as second stream provider where additional heat over CHP's max contribution is insufficient to meet the load or where the CHP is unavailable due to servicing etc.

The CHP plant has been selected to not only provide the necessary performance criteria to allow the design to meet Scottish Building Regulations Section 6 requirements. It has also been selected on the basis of ensuring optimum overall capacity and usage, the issue being that the currently available CHP units have a turndown aspect in terms of capacity output of 50%. The selection of this unit, which has a heat maximum capacity of 654kW and hence for the purpose of this study a turndown to 327kW reflects this sizing strategy.

To put this into perspective, the following demonstrates the relevant plant sizing compared to the CHP output.

1) Current operational boilerplant capacity 6400kW, 327kW CHP relates to 5.1% of capacity.
2) Current predicted maximum heating load for boilers 5600kW, 327kW CHP related to 5.8% of maximum estimated boiler load.

4.8.3 Current Heat Loads

The CHP heating output is taken direct to the main heating header and is thus available to contribute to all of the heating loads which are:-

- Heating circuits feeding room heat emitters
- Heating circuits serving air handling units
- Heating circuits serving domestic hot Water primary heating

4.8.4 Predicted System Loads

In order to review the estimated usage we have received the likely load patterns of the various components of the main heating loads, which are:-

1) Main Heating,

Maximum load (excluding air loading)1550kW at external design temp of -5.9°C. Thus with a room temperature of say average 21°C we should still have 327kW of heat input required until external temperature is 19°C and above.

2) Domestic Hot Water Load,

The hot water system capacity equals to a 1000kW input which a 327kW input constitutes 30% of the required load. However the Hot Water is user driven and as such we are suggesting that this load in real terms will only be available between by 0600 and 2000 hours.

3) Ventilation Load,

Given that we require to pre-heat the supply air being provided throughout the hospital, we have estimated that excluding Theatres the remaining air volume would increase by some 2.3°C if the entire 327kW was applied to the heating load alone. Given that the off coil temperature to the various systems should be around 20°C we have therefore reviewed the weather data for the period outside of the provided Hot Water demand cycle i.e. between 0600 and 2200 hours.

4) The pipework distribution system will have standing losses which would represent circa 5% over the whole system, this equates to 15kw of the 327Kw available.

We have then reviewed the number of hours when we could expect the external temperature to exceed 19°C. (See Appendix 1)

The results are:-

Hours exceeding 19°C	26 hours/ annum
Time period	May to August

Following discussions with a CHP manufacturer, it has been indicated that the CHP will require approximately 4.5 weeks duration of maintenance over the course of a year. With careful planning of the maintenance schedule the main servicing could occur during peak periods when external ambient is likely to exceed 19^{o}C. This strategy would then ensure that the CHP is continuously available when the ambient temperatures are below 19^{o}C.

4.8.5 Conclusion

From these studies we would conclude that the current system provides a robust and practical plant sizing strategy. A larger unit would in all probability given the 50% turndown ratio have a much lower usage factor. Likewise, a small unit wouldn't meet the Scottish Building Regulations Section 6 requirements and multiple smaller units could only offer a reduction on what is a very small annual percentage usage figure but with increased maintenance costs and potentially longer unavailability times due to regular ongoing maintenance issues.

In effect the system is utilising the air handling units as air cooled heat dumps but in an energy effective way as we are recycling this energy.

4.8.6 Buffer Vessel

Notwithstanding all of the above the system shall be configured to include two buffer vessels.

The buffer vessels shall comprise two thermal stores (2 x 15,000 litres) together with all controls, sensors and pumps to allow the vessels to operate in conjunction with the heating system and ensure that the CHP is the lead heat source and will limit the risk of CHP shutdown.

An emergency engine cooling unit shall also be provided in conjunction with the buffer vessels.

4.8.7 Appendix 1 – Edinburgh Weather – Hours Between 19ºC (1900h-0600h)

RHSC - Edinburgh Weather File Time when Temperature > 19degs between 1900h-0600h			
DATE	**TIME**	**TEMPERATURE**	**Total Hours**
Mon, 02/May	19:00	19.1	26
Mon, 28/May	19:00	20.7	
	20:00	20

Total daily hot water consumption	11475	Litres

CIBSE Guide G Public Health Engineering (CIBSE, 2004) Table 2.10 includes daily hot water use for various types of buildings. We have taken an average figure of 155 L/person/day based on the different mix of Hospital building wards. This figure has been selected based on Engineering knowledge and experience of similar projects. We have applied this daily DHW figure to the number of beds in the proposed building. We have also allowed for catering DHW, with the assumption that 3 meals will be provided per day.
We have developed the DHW profile based on Engineering judgement of how we expect the building to operate. Peak DHW usage are expected to occur during the morning and evenings when showers is assumed to be the peak DHW demand.
The figures have been used to calculate the total mass of hot water use per year by multiplying the values by the number of beds and meals and the days that the building is occupied.
The following details our calculation to evaluate the daily DHW usage.

Subject: HAI Scribe Stage 3 Construction

Dear Both

We had scheduled a meeting today to complete HAI Scribe Stage 3 but unfortunately we could not proceed with the meeting as key individuals were not present. We did however manage to discuss the ventilation query and we will now review the information we were given at the meeting, which Ken is going to send electronically.

As you will be aware this stage of HAI Scribe has to be completed prior to any construction starting on site. HFS have recently reviewed and changed HAI Scribe documentation and it is the new documentation that we are using.

When we completed Stage 2 at the workshop on 19th November we agreed that NHSL and their TAs would review the Stage 3 template and complete it in draft format which we would then review with IHSL at today's workshop. In order to progress this those of us who were at today's workshop agreed that in the first instance we would send you the completed draft and request that you review this and amend the document as appropriate. It is important that the as well as checking the yes/no/n/a responses that additional information is provided in the comments boxes to justify the response.

Given the need to have this completed prior to construction commencing and the need for us to review the completed documentation internally before we can sign off we do need to turn this around quickly. It may also be that we will require to meet to review the documentation but will advice of this once we have the completed documentation back from you.

RHSC – DCN Edinburgh
Air Movement Report For Single Bedrooms (Draft)

Wallace Whittle

1.0 Introduction

We have been asked to review the air movement within the single bedrooms under various ventilation scenarios.

1. Windows and trickle vents closed, no natural ventilation, mechanical ventilation only provided to the bedrooms.

2. Windows and window trickle vents open, natural and mechanical ventilation provided to the bedrooms.

3. Some of the windows and window trickle vents open and some closed, mixture of natural and mechanical ventilation to the bedrooms.

2.0 Interpretation of SHTM 03 Ventilation for Healthcare Premises

A single room within Appendix 1 : Table A1 : Recommended air-change rates is given under the ventilation column as supply/extract/natural, with 6 ac/hr and room pressure as zero or negative. The single room WC from the table is 3 ac/hr and room pressure is negative.

Current bedroom ventilation design is supply into the room at 4 ac/hr with opening windows and trickle vents to provide natural ventilation, this gives a balanced room pressure as long as the window is open.

The single bedroom WC extract has been enhanced to 10 ac/hr and the room pressure is negative.

3.0 Ventilation Scenario's

Scenario 1

1. Bedroom is positively pressurised by supply air.
2. En-suite is negative pressure to the bedroom.
3. Excess bedroom air flows to the corridor via doors.
4. Corridor is provided with extract ventilation, pressure is balanced.

Scenario 2

1. Bedroom has balanced pressure.
2. En-suite is negative pressure to the bedroom.
3. Excess bedroom air flows out the open windows and trickle vents.
4. Corridor is provided with extract ventilation, pressure is negative to surrounding bedrooms and other rooms.

RHSC – DCN Edinburgh
Air Movement Report For Single Bedrooms (Draft)

Wallace Whittle

Scenario 3

1. Bedrooms with open windows have balanced pressure and bedrooms with closed windows are positively pressurised by supply air.
2. En-suite is negative pressure to the bedroom.
3. Excess bedroom air flows out the open windows or through the bedroom doors if the windows are closed.
4. Corridor is provided with extract ventilation, pressure is negative to surrounding bedrooms.

Refer to Appendix 1 for the Air Flow and Resultant Room Pressure drawings.

The original reference design as detailed within the Environmental Matrix is as follows:-

Bedroom - Supply 4Ac/Hr & Room Pressure Positive.
WC – Extract 10Ac/Hr & Room Pressure Negative.

4.0 Conclusion

Reviewing the three air flow and resultant room pressure scenario drawings G1547/(57)SK01-SK03:

When the windows and trickle vents are utilised for natural ventilation the bedroom pressure is balanced and the corridor becomes negative.

If some of the windows and trickle vents are closed, these bedrooms will become positive and the bedrooms with open windows again will be balanced, where the corridor is negative.

Should all the bedroom windows and trickle vents be closed, the bedroom pressure is positive and the corridor shall be balanced as the corridor extract rate will match the supply air coming from the bedrooms via their doors.

The window trickle vents should be left open when the rooms are occupied, this will ensure that the bedroom pressure is balanced.

By utilising the proposed mixed mode ventilation proposal for the bedrooms, ie. opening windows and trickle vents with the supply air reduced from 6Ac/Hr to 4Ac/Hr direct into the bedroom, this will provide the most energy efficient solution for the space.

We believe that we have complied with the reference design concept as detailed within the original Environmental Matrix.

	2.4 - Schedule of derogations workshop to be organised on 08/09/14.	SC	29/08/14
1.5	2.5 - JB advised that PCP 4.27, Community Engagement Strategy was discussed on 26th August 2014 and it has been agreed this can be removed from the list of PCPs. IHSL to update the method statement with previous PCP feedback.	LE	03/09/14
1.6	2.7 – Board to provide delta view of updated corporate policies where possible.	SC	03/09/14
1.7	2.8 – Title of Revision D/E of the BCRS is still not resolved. Once clarified, Board to issue as a Transmittal to IHSL, including legal advisers.	GG/LE	27/08/14
2.0 Technical Schedule Tracker			

2.1	TS and PCP trackers reviewed line by line with status and commentary to be updated by IHSL.	LE	03/09/14
2.2	Board to issue Rev E of BCRs as a Transmittal to IHSL, including legal advisers.	RW	29/08/14
2.3	Meetings to review 4.3 Construction Methodology and 4.16 Commissioning arranged and further meetings requested to review the following: 4.5 Interior Design and Wayfinding & 4.6 Art Strategy (combined); 4.13 Acoustic Strategy; 4.26 Helipad Strategy; and 4.32 Schedule of Derogations.	SC	29/08/14
2.4	Legals to be advised to include both the RDD and Table of Finishes in their gaps list.	WW	29/08/14
2.5	Board cannot find documents for 4.16 Commissioning and 4.23 Specifications (Civil & Structural) on Aconex. LE to investigate.	LE	03/09/14
2.6	JB confirmed that Schedule Part 7 (Programme) will be updated with the revised dates, to be discussed at high level at Construction methodology workstream on 28/08/14.	JB	28/08/14
2.7	Schedule Part 13 (Independent tester) progress update requested.	WW	03/09/14
2.8	LE advised that during a review of the Environmental Matrix a number of discrepancies have been uncovered impacting on RDS production and requested input from NHSL. IHSL to raise RFI.	LE	03/09/14
2.9	Finalisation of paymech Gross Service Units relies on issue of SoA. IHSL to confirm expected timescale for this.	LE	03/09/14
2.10	FM – Schedules Part 12 and Part 16 – almost completed. IHSL to issue final version as Transmittal including legals when workstream satisfied with them. Timescale to be confirmed next week.	PU	03/09/14
3.0 Work Streams			
3.1	Design Steering Group – 01/09/14 – Board will send LE design risks for IHSL to add to the agenda.	GG	28/08/14
4.0 Requests for Information			
4.1	Open RFIs reviewed line by line. All parties to close open RFIs that have been addressed /superseded by subsequent work.	MM / LE	03/09/14
	Future reports will be a single collated sheet of open requests only.	MB	03/09/14
4.2	RIE drawings at interface: IHSL to speak to SC about drawings currently available in the office.	JB	03/09/14
	Board to provide room details (ie name/type) for the area surrounding the interface to identify any areas of sensitivity.	BC	03/09/14
5.0 Programme			
5.1	Following Project Steering Board on 22/08/14 the programme has been updated and all parties should use Revision 8J.	-	-
6.0 Preparation for PDG Meeting			
6.1	PDG meeting notes from 18/08/14 to be issued prior.	JB	29/08/14
	PCPs to be included in the agenda for the 01/09/14 PDG.	JB	29/08/14
7.0 Schedule 31, Interface			
7.1	BC advised on key points from 27/08/14interface meeting: 1. IHSL to present proposals on the Boundary Wall to South and External Lighting Design to Public Realm	JB	03/09/14
	2. First Floor Link Meeting – IHSL to propose date for meeting	JB	29/08/14
8.0 AOB			
8.1	Petrol Station interpretive report to be issued early w/c 01/09/14.	IHSL	03/09/14
8.2	It was reiterated that the correct lines of communications need to be followed at all times with neither party's subcontractors to contact the other party direct. All communication to go through NHSL/IHSL.	ALL	-
8.3	IHSL to provide proposal for issue and collation of documents for FC. This item to be added to the agenda for next week's PMG meeting.	WW	03/09/14

Graeme

Please see attached list of rooms for which RDSs will be provided for FC.
During RDD (post RDD) all room types will be generated as an RDS, culminating in an RDS attributable to each room.
C-sheets will be provided for the room list attached too ; and as discussed/agreed these will be listed in the RDD Schedule.

Regards
LE

Liane,

Further to your email below, please refer to the attached spreadsheet with comments from the Board.

Can we add this to our meeting on Tuesday?

Kind Regards
Graeme

ITEM	ACTION	DATE RAISED	CURRENT ACTIVITY	ACTION WITH	DATE CLOSED
01	Town Planning - current conditions schedule up to date and circulated on Aconex. Board to be issued formally.	02/09/2014	Final wording being agreed for all conditions, issue to Board imminent.	IHSL/BMCE	
02	OF/FC/RDD - stamps wording to be agreed for return of all drawings	16/05/2014	Stamp wordings agreed, stamps delivery awaited.	CLOSED	19/09/2014
03	OF/FC/RDD - drawing lists to be progressed and issued.	02/09/2014	All in progress, all issued in draft to NHSL except RDD, due w/e 26/09/14.	IHSL/BMCE	
04	Environmental Data Matrix - issues with room type allocations noted.	02/09/2014	IHSL reviewed, revised PCP 4.9 reviewed.	CLOSED	19/09/2014
05	RDS - content and numbers still to be agreed. IHSL confirmed an RDS will apply to each room and will be provided during RDD as agreed.	27/06/2014	Content agreed, list issued, RDS issued for review.	CLOSED	19/09/2014
06	Board reviewed all 1:50 loaded plans and noted 23 departments with no comments, 33 depts with minor and major comments.4 depts not yet reviewed. Board/IHSL to review comments.	02/09/2014	Meeting took place 08/09/14 to discuss all comments. None required drawing updates as none were affecting Operational Funcitionality.	CLOSED	08/09/2014
07	Samples Schedule - requires to be populated further.	02/09/2014	To be populated further when sub cts appointed.	IHSL/BMCE	
08	Derogations Schedule - meeting planned 12.09.14 to review first drafts.	02/09/2014	Meeting took place ; comments received, BMCE have issued via aconex for next level of review by Board.	NHSL	
09	Secure by Design - progress required.	02/09/2014	IHSL are reviewing current situation, contact received from B Currie	IHSL/BMCE	
10	RFI reports to be reviewed in PMG meeting.	02/09/2014	Reports now reviewed weekly.	CLOSED	02/09/2014
11	Theatre windows to be issued to Board for consideration.	02/09/2014	Issued, and instruction received from NHSL	CLOSED	19/09/2014
12	DCN Courtyards - design options to be issued to the Board for consideration.	02/09/2014	Issued, instruction awaited from the Board.	NHSL	
	SPECIFIC DESIGN MATTERS				
13	**Anti Ligature** - IHSL to ensure mental health room in A1 has plasterboard ceiling.	02/09/2014	Drawing is already submitted to Board, comment to be made on drawing.	NHSL	
14	**Anti Ligature** - Board to consider reduction in scope of anti- lig windows to whole hospital.	24/09/2014	IHSL to make proposal for consideration.	IHSL	
15	**Communication spaces / street widths** - derogation sought for street width reduction at resting places. Reviewed in meeting 24/09/14	02/09/2014	Board to review interior finishes drawings submitted and markup for further discussion with IHSL	NHSL	
16	**Downstand beams / service runs** - NHSL to return comments on the downstand beams.	02/09/2014	All reviewed, NHSL accepted the proposal. Derogation to be signed off.	CLOSED	24/09/2014
17	**CHP optimisation** - NHSL to return comments on paper issued under PCP 4.10.	02/09/2014	Board to issue final comments on PCP	NHSL	
18	**Lifts** - NHSL to return comments - revised PCP issued. Possible issues surrounding FM lift sizes. Discussed at length in meeting.	02/09/2014	Comments received by Board. IHSL to confirm compliance in writing. NHSL to consider instruction required as necessary.	IHSL NHSL	
19	**Acoustics** - issue to be resolved regarding reverberation time to the atrium. Discussion ended at 2.0 seconds at 1:1 communication spaces, and maximum upper limit of 2.75 seconds. Target 2.5 seconds.	02/09/2014	ACL to redraft minor comments throughout and resubmit PCP. NHSL to consider RT's again and escalate to Project Delivery Group if necessary.	IHSL/ACL NSHL

Hi Liane,

As the RDS are incomplete, the Board has not stamped the drawings.

In accordance with the requirements in Section 5 (Reviewable Design Data) of Schedule Part 6 (Construction Requirements) Appendix B (Completion Criteria) of Schedule Part 10 (Outline Commissioning Programme), Project Co has to submit to the Board through the Review Procedure completed Room Data Sheets for all Rooms whilst taking into account Section 3 of Schedule Part 6 of the Boards Construction Requirements.

Kind regards,

Mo

Dear All,

Please see attached drawings for Financial Close issued for review. These drawings have to be returned to BMCE signed, dated and with a status. A hard copy will be issued to you shortly.

Should you have any queries do not hesitate to contact me.

Kind Regards

Anne

Meeting: PDG Meeting

Location: MacKinlay Room

Date and time: Monday 27th October 2014 – 1.30 – 3.30pm

Subject: Progress/update to Financial Close

Meeting Chair: Paul Serkis

Attendees:

Paul Serkis	IHSL	PS
Juan Custodio	IHSL	JC
Sean Ferm	IHSL	SF
Matthieu Dannoot	IHSL	MD (dial in)
Brian Currie	NHSL	BC
Iain Graham	NHSL	IG
Jackie Sansbury	NHSL	JS
Graeme Greer	NHSL	GG
Maureen Brown	NHSL	MB
Sorrel Cosens	NHSL	SC
Moira Pringle	NHSL	PS
Stuart Davidson	NHSL	SD

Apologies:

John Ballantyne	IHSL	JB
Janice MacKenzie	NHSL	JMc

1.0 Review of previous minutes		Action	Target date
1.1	No minutes issued from last meeting.		
2.0 Updated programme to FC			
2.1	Review of Target FC programme		
2.1.1	Overall discussion held in regard to the target Financial Close date. The proposed date is now 12th December 2014.	All	
2.1.2	Target FC programme (Rev9) to be updated in line with discussions at the meeting and to be circulated by Thursday 30th prior to being tabled at the Project Steering Group meeting scheduled for Friday 31st October.	IHSL	
2.1.3	JC confirmed that appointment of EC Harris as independent tester is progressing. To confirm to Board when formally completed.	IHSL	
3.0 Documents list for FC (including PCP's/TST)			
3.1	**Technical Schedule Tracker** The Schedules are generally progressing well with all major items off the critical path. These are being monitored through the PMG weekly meetings.	PM Group	
3.2	**Project Co Proposals**		
3.2.1	Approximately 30% of PCP's have been forwarded to the LTA. PS updated the group on all PCP's with a status update for each. Key actions: PCP 4.8 - Civ & Struc: narrative to be updated following meeting held earlier in the morning and then re-issue to both Board and LTA. [PMN: PCP updated and will be issued 28/10/14. PMN by Board – PCP to be reviewed before issuing to LTA due to possible material change re basement waterproofing] PCP 4.16 – Commissioning: Board have provided commentary on PCP. IHSL to review and respond to Board. PCP 4.32 Schedule of Derogations: IHSL to include agreed wording and re-issue to Board and LTA	Note IHSL IHSL IHSL	 31/10/14 31/10/14 28/10/14
3.2.2	Target date for all PCP's to be sent to Board and LTA by close of business Wednesday 29th October latest in parallel.	IHSL	29/10/14
3.2.3	Cut-off date for any final tweaks (ie non material changes) to PCP's by 12th November.	IHSL/Board	12/11/14
4.0 Summary Feedback (by exception) from various workstreams with actions for PDG			
4.1	Project Management Group This group will continue to monitor the process and ensure technical documents ready for FC. Meeting on 29th October to consider which PCP's can be confirmed at that date as no further comment from the Board and which will be subject to non-material finalisation – per 3.2.3 above.	Note	
4.2	IT Group: Minor comments being collated and included in PCP 4.14 and shall be re-issued to the Board/LTA as above.	IHSL	29/10/14
4.3	Community Engagement: Partnership established, good progress being made and meetings/events being attended, held with positive feedback.	Note	
4.4	Legal & Insurance JC updated the group generally reporting good progress on legal documents. Insurance meeting scheduled for 29/10/14.	Note	

RHSC & DCN
At Little France

1.0 Review of previous minutes		Action	Target date
	1st draft Funding Agreement docs to go to lenders 29/10/14.		
4.5	Interface (Campus) Construction and logistics Schedule Part 31 progress very well advanced. Minor points being addressed with a target of completion by Fri 31/10/14. Table of comments being responded to with exception of those that unable to respond to until during the Works phase. Target to have completed where possible and confirmation issued back to IHSL by 04/11/14. BC advised Consort about to appoint MRI/Endoscopy works contractor.	IHSL/Board	04/11/14
4.6	M&E PCP 4.9 M&E being updated by IHSL with Board comments included and will be re-issued to the Board and LTA asap.	IHSL	28/10/14
4.7	Design Steering Group No further formal DSG meetings scheduled for this period prior to FC. Design issues being resolved through close out of PCP's.	Note	
4.8	Energy Strategy document (Schedule Part 12 Section 4) IHSL (BES) to respond with updated version.	IHSL	28/10/14
4.9	Commissioning PCP 4.16: The Board have commented on the draft PCP. IHSL to review and update.	IHSL	31/10/14
4.10	FM IHSL (BES) reviewing OPex and LCC following capex agreement last week (22/10/14). Feedback to be issued by COB 28/10/14	IHSL	28/10/14
4.11	Finance JC advised M&G are working/reading through the documents. JC will advise any comments that arise from reading.	IHSL	
5.0 AOB			
5.1	Review of Design and Technical issues list GG gave an update on what items remained outstanding on the issues list. It should be noted these are not material but nevertheless should be resolved prior to FC. Notable items discussed and actions:: • Updated building warrant schedule to be provided • Issue RDD response • IHSL RDD tracker to be appended to 4.1 Design Management PCP • Equipment list – v7 is latest; move to v8 to be considered • Anti-Ligature to be captured solely as a derogation and not as a PCP • Respond to bus stop queries and provide updated drawings • Respond to / update CGL report to share with CEC and insurers as well as LTA • Flue planning application – on CEC 5 Nov meeting agenda • GIR/GDR for main site to be produced by RGB • PCP's to be reviewed for update for Transfer Beam issues • Respond to environmental matrix • Agreement on anti-ligature windows may be dealt with through derogations GG to issue latest version of issues list.	IHSL/Board IHSL Board IHSL Board IHSL IHSL IHSL IHSL Note IHSL IHSL IHSL IHSL/Board	28/10/14
5.2	Programme		
5.2.1	Construction programme IHSL to issue latest version (pre change to FC target) of Construction programme to Board.	IHSL	29/10/14
5.2.2	Target programme to FC (see note 2.1 above)		
5.2.3	Design development programme This is in regard to arranging design meetings with Users post FC to ensure the construction programme is aligned with appropriate 6 week notice to Users.	IHSL	12/11/14
5.3	Capex The Capex was agreed at the meeting Wed 22/10/14.	IHSL	31/10/14

RHSC & DCN
At Little France

1.0 Review of previous minutes		Action	Target date
	Updated cost plan to be issued asap.		
5.4	Letters of Reliance IHSL to confirm how Project Co will deal with this. Registered name and address required.	IHSL	12/11/14
5.5	Service Yard Discussion held around the Service Yard and in particular 2 rooms allocated to the Board. Board requested a drawing which identifies the yard layout to 1:50 in order to confirm operational functionality. IHSL to consider. Need to confirm that these are in the SoA, therefore equipment list, strategy drawings and Paymech. Board to check if these are included in Schedule 14 (GSU) for Paymech purposes.	IHSL IHSL/Board	28/10/14 28/10/14
5.6	RDS and environmental matrix to be added to the Completion Criteria.	Board	
5.6	FC Drawings The Board requested hard copies of all drawings that will be included in the FC documents “Bible”. IHSL to consider and revert back.	IHSL	
5.7	Project Steering Group Meeting attendees: IHSL confirmed JC, SF and JB would be attending on 31/10/14	Note	

Scottish Hospitals Inquiry – Working draft documents issued on 10 June 2022
Multiplex Construction Europe Limited – Response
29 July 2022

1 Introduction

1.1 The following is a response by Multiplex Construction Europe Limited ("**Multiplex**") to the working draft documents issued by the Inquiry by e-mail dated 10 June 2022 (timed at 16:48) having the following titles:

1.1.1 Scottish Hospitals Inquiry – Research Paper. Comparison across versions of the Environmental Matrix in relation to SHTM 03-01 up to Financial Close (13 Feb 2015);

1.1.2 Narrative concerning the Reference Design of the Royal Hospital for Sick Children and Department for Clinical Neurosciences; and

1.1.3 List flagging gaps in paperwork and ambiguity surrounding final versions identified in the Reference Design paper.

1.2 In preparing this response, Multiplex has proceeded on the basis that the responses to the questions are only to address the period up to 13 February 2015 (being Financial Close), with the period after 13 February 2015 and evidence relating thereto to be addressed at a later stage in the work of the Inquiry.

1.3 As a general point Multiplex note its involvement in RHSC & DCN project first commenced in or around March 2013. Multiplex is therefore not able to assist the Inquiry in relation to the period prior to this.

2 Multiplex response to each of the questions 1 to 14 listed in 'Scottish Hospitals Inquiry – Research Paper. Comparison across versions of the Environmental Matrix in relation to SHTM 03-01 up to Financial Close (13 Feb 2015)'

2.1 "*1. Do you agree with the above? If not, please provide any corrections and/or clarifications.*"

2.1.1 In relation to the matters set out at paragraphs 1 to 10 generally, as a preliminary point Multiplex would respectfully direct the Inquiry to Multiplex's responses (dated 8 October and 5 November 2021) to the Inquiry's Request for Information Number 2, which responses address, *inter alia*, the EM. In particular, Multiplex would direct the Inquiry to paragraph 2.2 of the response and document nos. 2.7 (Critical Care) and 2.11 (Single Room).

2.1.2 Paragraph 1 – Multiplex was not involved in the development of the earlier versions of the EM. For the reasons set out in the above noted documents and explained further below, Multiplex respectfully submits that the reports prepared by KPMG and Grant Thornton are incorrect where they refer to there being 'errors' in the EM. Multiplex's understanding was that the EM represented NHSL's specific requirements for the RHSC & DCN project.

2.1.3 Paragraph 1 – "*In particular, it was identified that 4ACH had been specified in the EM for critical care and multi-bed rooms when - per the Board's Construction Requirements and Table A1 of SHTM 03-01 Part A - 6ACH should have been specified (for general wards) and 10ACH (for critical care areas).*" Multiplex would respectfully submit that this sentence is incorrect. The Board's Construction Requirements provide that:

"*8 Mechanical & Electrical Engineering Requirements*

Project Co shall provide the Works to comply with the Environmental Matrix."[1]

In addition, compliance with SHTM 03-01 was qualified in terms of the Project Agreement[2].

2.1.4 Paragraph 6 –"*Neither NHSL nor IHSL picked up on many of the discrepancies between what was stated in the EM and the SHTM until July 2019 when the IOM testing was carried out*". Multiplex would respectfully submit that this sentence is incorrect. NHSL and IHSL were aware that NHSL's requirements as set out in the EM departed from, *inter alia*, SHTM 03-01 prior to Financial Close. By way of clarification the Inquiry is directed to the following:

2.1.4.1 On 3 July 2014 Multiplex requested that Mott MacDonald provide to it a copy in native format of the EM which had been prepared by NHSL and which formed part of the ITPD[3]. A copy in native format of the EM was provided by Mott MacDonald to Multiplex on 11 July 2014[4].

2.1.4.2 On 29 September 2014 Multiplex issued to NHSL and Mott MacDonald a draft version of the EM[5] which had been prepared by Wallace Whittle and which EM complied with the EM provided to Multiplex referred to at paragraph 2.1.4.1 above[6].

2.1.4.3 On 14 October 2014 Mott MacDonald issued to Multiplex a copy of NHSL's initial technical comments[7] on the draft EM, an extract from which comments is shown below:

7. Bedrooms 4ac/hr, SHTM says 6 ac/hr
   Bedrooms have no extract
   Bedroom en-suites 10 ac/hr, SHTM says 3 ac/hr
   Bedrooms stated as positive pressure, SHTM says 0 or –ve pressure
   The supply air to a bedroom has to be balanced with extract
   e.g. Bedroom area 19m2 and 2.4m high = volume 45.6m3 x 6ac/hr =273.6 m3 / hr
   En-suite area 5 m2 and 2.4m high = volume 12.0m3 x 3ac/hr = 36 m3 / hr
   To achieve balanced pressure within room bedroom extract required = 273.6 – 36 = 237.6 m3 / hr

8. Recovery stated as 4 ac/hr, SHTM says supply and extract 15 ac/hr

1 Page 104 of Hearing commencing 9 May 2022 - Bundle 3 - Governance Volume 3 (of 3).
2 As explained in Multiplex's responses to the Inquiry's Request for Information Number 2.
3 E-mail dated 3 July 2014 (timed at 09:00).
4 Aconex mail number MM-GC-000126 dated 11 July 2014. Document with file name "*RHSC_DCN RDS Environmental Matrix- SoA 13_Issue*".
5 Aconex mail number BMCE-GC-001193 dated 29 September 2014. Document with file name "*RHSC_DCN RDS Environmental Matrix-140904*".
6 Volume 3, Schedule Part 6, Section 3, Appendix C to the ITPD. The EM was unchanged in the version incorporated as part of the IFST.
7 Aconex mail number MM-GC-000339 dated 14 October 2014. Document with file name "*141013 Environmental Matrix Comments*".

2.1.4.4 On 28 October 2014 Multiplex forwarded Wallace Whittle's response to the initial technical comments to Mott MacDonald, an extract from which response (Wallace Whittle's response being the right-hand column in the table) is copied below[8]:

7. Bedrooms 4ac/hr, SHTM says 6 ac/hr Bedrooms have no extract Bedroom en-suites 10 ac/hr, SHTM says 3 ac/hr Bedrooms stated as positive pressure, SHTM says 0 or –ve pressure The supply air to a bedroom has to be balanced with extract e.g. Bedroom area 19m2 and 2.4m high = volume 45.6m3 x 6ac/hr =273.6 m3 / hr En-suite area 5 m2 and 2.4m high = volume 12.0m3 x 3ac/hr = 36 m3 / hr To achieve balanced pressure within room bedroom extract required = 273.6 – 36 = 237.6 m3 / hr	The scheme is based on the Reference design throughout which is essentially mixed mode with openable windows and 2/3rds mechanical supply air to all bedrooms. This gives physiological benefits with access to fresh air control by user and obvious Energy benefits. We have amended the environmental schedule to show the room being balanced which is provided by the opening window.
8. Recovery stated as 4 ac/hr, SHTM says supply and extract 15 ac/hr	15 ac/hr utilised with the current design, matrix amended accordingly.

2.1.4.5 The matter of air change rates and pressure regimes set out in the EM departing from SHTM were therefore the subject of discussion by this date. The matter of air change rates having been settled, discussions which then followed related only to pressure regimes as set out below.

2.1.4.6 On 31 October 2014 Multiplex issued an updated version of the EM to Mott MacDonald[9].

2.1.4.7 A meeting with the subject 'Environmental Matrix NHSL Comments Feedback' was convened on 11 November 2014. The meeting was attended by representatives from Multiplex, Wallace Whittle, NHSL and Mott MacDonald. Notes of the meeting were prepared by Mott MacDonald and issued by e-mail on 11 November 2014[10], which notes are copied below:

"Project Co shall update the Environmental Matrix to reflect the following Board comments

- Update the Environmental Matrix shall by updated by Project Co to reflect all the rooms and room types in the proposed Facility, this should be based on an updated Schedule of Accommodation that has been commented on separately by the Board. This also needs to reflect the names and room numbers in the GSU table.
- Include the requirements contained in the Clinical Output Specification including but not limited to the requirement that theatre temperatures are to be able to be raised to 31°C for certain operations
- Measures shall be assessed, modelled and implemented to demonstrate that the internal air temperature of the following room types to reduce the temperature control from 28°C to 25°C
  - Treatment Rooms;
  - Consulting Rooms;
  - Laboratory;
  - Physiotherapy Studio;
  - Recovery.

  These room shall not exceed the maximum acceptable level of 25°C for more than 50 hours per annum
- Detailed proposal awaited on bedroom ventilation to achieve balanced/negative pressure relative to corridor.
- Colour rendering all stated as 80 where certain areas should be 90
- There also need to have a consistent approach e.g. guidance notes and ED body view room stated as 28 -8, bereavement suite body view room stated as 25 -8.
- Further discussion is required on the minimum temperate requirement for the Body View Room.

8 Aconex mail number BMCE-GC-001410 dated 28 October 2014. Document with file name "*20141027 Environmental Matrix Comments*"

9 Aconex transmittal number BMCE-TRANSMIT-001192. Document with file name "*WW-XX-XX-DC-XXX-001*"

10 E-mail dated 11 November 2014.

Bullet point 4 above relates to the discussions concerning the pressure regime for single bedrooms.

2.1.4.8 On 19 November 2014 a Healthcare Associated Infection (HAI) – System for Controlling Risk in the Built Environment (SCRIBE) ("HAI-Scribe") meeting was held at which it was recorded:

2.2	Is the ventilation system design fit for purpose, given the potential for infection spread via ventilation systems?	**Yes**		**No**	**x**	**N/A**	
		Some concern has been raised in relation to a potential issue with ventilation with regard to negative/balance pressure in single bed rooms. Awaiting drawings and further information to fully understand if there is a risk/issue.					

2.1.4.9 On 13 January 2015 an MEP workshop meeting was held at which the issue of pressure regimes was discussed. This was originally planned as a HAI-Scribe Stage 3 review which was cancelled due to attendance, however ventilation was discussed by those who attended. A 'ventilation overview paper' was issued by Multiplex that day following the meeting[11].

2.1.4.10 On 19 January 2015 Multiplex issued a Request for Information[12] to Mott MacDonald in the following terms:

"*As per meeting of Tuesday 13.01.15 and our request for clarity on negative / positive pressure regime within the bedrooms, we attach the sketches distributed at the meeting and seek confirmation / acceptance from the NHS review with infection control.*"

2.1.4.11 On 29 January 2015 Mott MacDonald responded[13] to Multiplex's Request for Information in the following terms:

"*Following your recent RFI, the Board respond as follows:*

- *The single room with en-suite ventilation design shall comply with the parameters set out in SHTM 03-01.*
- *The design solution should not rely in any way with the opening windows as these will be opened or closed by patient choice.*
- *The critical factor from SHTM 03-01 for infection control will be the resultant pressure within the room being balanced with or negative to the corridor.*
- *Isolation room ventilation shall comply with SHPN 04 Supplement 1.*"

11 Aconex mail number BMCE-GC-001652 dated 13 January 2015.
12 BMCE-RFI-000077 - Bedroom Ventilation: HAI Scribe Confirmation.
13 E-mail dated 29 January 2015.

This was a variation / change to the mandated positive pressure requirement defined within the reference design EM to a balanced or negative pressure regime for the single bedrooms.

2.1.4.12 Following the above discussions, the EM was incorporated into the Project Agreement at Financial Close as part of the Room Data Sheets. The EM was defined as detailing "*the room environmental condition requirements of the Board within each department/unit/space/area*…." with Part 8 of the BCR's stating: *"Project Co shall provide the Works to comply with the Environmental Matrix."*[14]

2.1.4.13 NHSL's requirements as to, *inter alia*, air change rates and pressure regimes were subsequently confirmed post Financial Close during the RHSC & DCN project. By way of example, the EM was reviewed as part of the Schedule 8 Review Procedure, together with the wider associated ventilation design documents. Further, on 18 April 2018, as part of discussions in relation to the pressure regime in Multi-Bed Wards, NHSL expressly confirmed they *were "seeking design for 4 Air Changes to all 14 Rooms"*, four of these 14 rooms were located in Critical Care[15]. The associated design drawing was then issued through RDD on 21 June 2019 and given Status A by NHSL on 27 July 2018.[16]

2.1.5 Footnote 5 - "*The inquiry is unclear what "positive to ensuite" means in terms of the SHTM standards.*" Multiplex understands this term is used to determine the direction of airflow from clean to less clean i.e., air movement from the bedroom to the en-suite. This is to reduce contaminant and/or odour in the en-suite entering the bedroom.

2.1.6 Paragraph 10 – "*Instead all rooms in the hospital are categorised by their room function, irrespective of what department that room is situated in.*" Multiplex would note that in the body of the EM rooms are categorised by department.

2.1.7 Paragraph 14.2 - The change in pressure from positive to balanced was a result of NHSL's comments issued on 14 October 2014 and the response from Wallace Whittle on 28 October 2014 (referred to at paragraph 2.1.4 above).

2.2 "*2. Who produced or proposed changes to the Environmental Matrix at the following stages? 2.1. Before the switch to NPD 2.2. During the reference design stage 2.3. During Competitive Dialogue 2.4. After selection of the preferred bidder*"

2.2.1 Multiplex is unable to assist the Inquiry in relation to questions 2.1 and 2.2.

2.2.2 In relation to question 2.3 in the period from 11 March 2013 to 5 March 2014 the EM was under the control of Mott MacDonald and NHSL.

---

14 Reference is made to Section 2 of Multiplex's 5 November 2021 Response to the Inquiry's Request for Information Number 2,

15 Aconex mail number NHSL-GC-002953 dated 18 April 2018.

16 WW-SZ-XX-DC-XXX-010 – REV 7.

2.2.3 In relation to question 2.4 in the period from 6 March 2014 to 13 February 2015, the EM was updated by Wallace Whittle in response to comments received from Mott MacDonald on behalf of NHSL and issued on 29 September 2014 and on 31 October 2014 before then being incorporated into the Project Agreement, reference is made to paragraph 2.1.4 above.

2.3 "*3. Who approved or confirmed acceptance of the Environmental Matrix and any changes made to it?*"

2.3.1 Multiplex is unable to assist the Inquiry in relation to the period prior to 11 March 2013.

2.3.2 In the period from 11 March 2013 to 5 March 2014 the EM was under the control of Mott MacDonald and NHSL.

2.3.3 In the period from 6 March 2014 to 13 February 2015 Multiplex issued the EM to Mott MacDonald for comment and acceptance on behalf of NHSL on 29 September 2014 and on 31 October 2014 before then being incorporated into the Project Agreement, reference is made to paragraph 2.1.4 above.

2.4 "*4. What was the purpose of the Environmental Matrix?*"

2.4.1 Multiplex understands that the purpose of the EM was to define NHSL's specific room environmental requirements. In this regard, Multiplex would direct the Inquiry to Section 2 of Multiplex's 5 November 2021 Response to the Inquiry's Request for Information Number 2, together with the following:

Bid submission requirement C8.3 of the ITPD stated:

"*Whilst bidders are required to undertake their own design, the Board has provided a draft Environmental Matrix as part of the ITPD documentation. Bidders must confirm acceptance of the Board's Environmental Matrix, highlighting any proposed changes on an exception basis*"

The BCRs within the ITPD and Project Agreement confirmed:

"*Environmental Matrix*

Means the Environmental Matrix, which ***details the room environmental condition requirements of the Board required within each department / unit / space / area****. The title is Reference Design Envisaged Solution – RHSC / DCN Environmental Matrix version third issue as set out in Appendix C of this Section 3 (Board's Construction Requirements) of Schedule Part 6*

(Construction Matters) (as varied, amended or supplemented from time to time in accordance with the Project Agreement);"[17] (emphasis added)

"*8 Mechanical & Electrical Engineering Requirements*

[17] Page 11 of Hearing commencing 9 May 2022 - Bundle 3 - Governance Volume 3 (of 3).

Project Co shall provide the Works to comply with the Environmental Matrix."[18] (emphasis added)

"*The need to* ***maintain comfort conditions in accordance with the Room Data Sheets*** *in all areas but particularly in clinical areas is of paramount importance and Project Co shall develop strategies for achieving these conditions together with minimum energy consumption.*"[19] (emphasis added)

"*2.5.3 Room Data Sheets*

Standard format Room Data Sheets have not been prepared by the Board for the Project*.* ***The specific room requirements*** *(the "Room Information")* ***are detailed in*** *a combination of the following documents:*

- *The Board's Construction Requirements;*
- ***The Environmental Matrix****;*
- *The Schedule of Operational/Design Notes;*
- *The Equipment Schedule;*
- *The Equipment Responsibility Matrix;*
- *The Draft Schedule of Accommodation; and*
- *The Operational Functionality elements of the Reference Design.*"[20]

2.4.2 Item 1 of the Guidance Notes to the EM provided with the ITPD stated: "*This workbook is prepared for the Reference Design Stage as an easier reference tool to replace ADB RDS M&E Sheets for the Environmental Criteria elements as described on these sheets"*

2.4.3 Item 1 of the Guidance Notes to the EM incorporated in the Project Agreement, stated: "*This workbook is prepared for the Financial Close Stage as an easier reference tool to replace ADB RDS M&E Sheets for the Environmental Criteria elements as described on these sheets."*

2.4.4 Page 3 of the EM is then titled: "*Room Function Reference Sheet*" and states: "*The following table details reference templates which are used to populate cells within the environmental matrix. Refer to individual department sheets for individual room environmental conditions*". In relation to ventilation this table provides the type, supply air changes per hour ("ac/hr"), extract ac/hr, relative pressure, and minimum filtration required for each room type. This being then further expanded within the matrix by reference to each department, with paragraph 2.5 of the BCR's stating:

18 Page 104 of Hearing commencing 9 May 2022 - Bundle 3 - Governance Volume 3 (of 3).
19 Page 120 of Hearing commencing 9 May 2022 - Bundle 3 - Governance Volume 3 (of 3).
20 Page 200 of Hearing commencing 9 May 2022 - Bundle 3 - Governance Volume 3 (of 3).

"*…Where the Board has defined their preference specifically, Project Co shall adopt these preferences as a mandatory requirement. Where no Board preference is stated, Project Co shall engage the Board in the design development process to seek and incorporate the Board's preference within the Facilities*".

2.4.5 Paragraph 2.1.4 and 2.1.32 of Schedule Part 10, Appendix B - Completion Criteria of the Project Agreement, which stated:

2.1.4: "*All mechanical and electrical Plant and systems shall be tested, commissioned and operate satisfactorily in accordance with the specified design criteria, any manufacturers' operating requirements and the Room Data Sheets*"

2.1.32: "*Project Co shall provide Environmental Matrix including Commissioning data test sheets as commissioned in accordance with CIBSE Commissioning Code C and demonstrating compliance with the Environmental Matrix*"

2.4.6 The EM defined NHSL's specific environmental requirements for each space and IHSL were then to develop the building services engineering solutions to achieve these defined environmental requirements.

2.5 "*5. What are Schedule of Accommodation sheets, who produces them and what information did they contain?*"

2.5.1 Generally, a schedule of accommodation defines the minimum space requirements within a facility. The schedule is usually prepared by the client as a briefing document defining their needs. The schedule is likely to contain a room reference no, room name, room type, room area (m²) and arranged by department. As a project progresses the design team develops and expands the schedule to record the actual designed area highlighting any variance.

2.5.2 For the RHSC & DCN project the schedule of accommodation was prepared by NHSL and included within the ITPD Room Information. During the preferred bidder stage the schedule of accommodation was developed by IHSL.

2.6 "*6. Particularly with regard to paragraph 6, could you further explain or clarify the connection between the room function reference sheet, the 'department sheets', ADB Room Data Sheets, and the room data sheets that NHSL and IHSL were responsible for (as you understand it).*"

2.6.1 As a preliminary point, as explained above and by way of clarification, Multiplex would direct the Inquiry to the response to questions 1 and 4 above, as to the responsibility for the EM and Room Data Sheets.

2.6.2 The environmental matrix format was devised prior to Multiplex's involvement and contained both the Room Function Reference Sheet and the Department Sheets.

2.6.3 The Room Function Reference Sheet was included in the EM provided with the ITPD, it provided one line entry for each room type in the facility. The sheet contains the environmental data for each room type. This sheet confirms "*Refer to individual department sheets for individual room environmental conditions"*.

2.6.4 The Department Sheets contain all rooms within each department and provides the environmental conditions for each room. It covers all departments within the facility, as such it is significantly larger than the Room Function Reference Sheets.

2.6.5 Room data sheets are generally produced using a software package such as the Activity Data Base ("ADB") or similar. The system allows room data sheets to be developed from a standard library that can be modified to record specific client requirements.

2.6.6 Item 1 of the Guidance Notes to the EM provided with the ITPD stated: "*This workbook is prepared for the Reference Design Stage as an easier reference tool to replace ADB RDS M&E Sheets for the Environmental Criteria elements as described on these sheets."*

2.6.7 Item 1 of the Guidance Notes to the EM incorporated in the Project Agreement stated: "*This workbook is prepared for the Financial Close Stage as an easier reference tool to replace ADB RDS M&E Sheets for the Environmental Criteria elements as described on these sheets.*"

2.6.8 At Financial Close, under the Project Agreement, Room Data Sheets were defined as having "*the meaning given in Section 6 (Room Data Sheets) of Schedule Part 6 (Construction Matters)*". Section 6 then states:

"*The Room Data Sheets are the Room Data Sheets as set out on the disc in the Agreed Form identified and executed as Appendix 1 (RDS Pack) and Appendix 2 (Environmental Matrix) of Section 6 (Room Data Sheets) of Schedule Part 6 (Construction Matters) of this Agreement, referred to in and forming part of this Agreement.*"

2.6.9 The Room Data Sheets on the project were accordingly formed of two parts: (1) the Room Data Sheets which were provided as Appendix 1 to Section 6; and (2) the EM which is Appendix 2. The ventilation requirements in the Room Data Sheets incorporated as Appendix 1 to Section 6 of the Project Agreement were derived from the EM on the basis they represented NHSL's specific requirements for the project.

2.7 "*7. Other than SHTM 03-01, what guidance and sources of information were used to compile the Environmental Matrix, with particular reference to single bedrooms, 4 bed-rooms/multi-bed wards, and Critical Care/HDU?*"

2.7.1 Multiplex is unable to assist the Inquiry with this question in relation to the EM's prepared by NHSL.

2.7.2 Likewise, insofar as the EM issued on 29 September 2014 and on 31 October 2014 is concerned, the environmental conditions within the EM were provided by NHSL. Multiplex would respectfully direct the Inquiry to Wallace Whittle as the authors of the EMs issued in 2014 to as to the guidance and information it took into account in preparing the EMs.

2.8 "*8. Why are a number of department-specific room types (for example for neutropenic patient areas, infectious disease iso room, UCV operating theatre and anaesthetic room) not included in the Room Function Reference Sheet when they are referred to in Appendix 1 of SHTM 03-01 part A as requiring specialised ventilation?*"

2.8.1 Multiplex is unable to assist the Inquiry with this question, the format of the Room Function Reference Sheet was decided prior to their involvement.

2.9 "*9. Is there a difference between "HDU" and "Critical Care"?*"

2.9.1 Multiplex is unable to assist the Inquiry with this question as it is a matter for suitably qualified clinical experts.

2.9.2 Multiplex would note that at the RHSC & DCN project the "*Critical Care*" department provides both Paediatric Intensive Care ('PICU') and High Dependency ('HDU').

2.10 "*10. Why was "HDU" removed from the room function reference sheet in IHSL's version of the EM dated from September 2014? Was NHSL informed?*"

2.10.1 The EM issued on 29 September 2014 was prepared by Wallace Whittle and Multiplex would therefore respectfully direct the Inquiry to Wallace Whittle to respond to this question.

2.10.2 Multiplex would note that the tab 'All Rooms' includes reference to HDU's.

2.11 "*11. The table in appendix 1 of SHTM 03-01 Part A recommends 'S/E/N' (supply, extract and natural) ventilation for single rooms. What do you understand this to mean in relation to the 'mixed mode' ventilation strategy referred to in different versions of the EM?*"

2.11.1 Multiplex understands the S/E/N outlined in SHTM 03-01 Part A, to be referencing alternative means of providing ventilation i.e. mechanical supply, mechanical extract or natural ventilation. The SHTM has a section that outlines the use and limitations of a natural ventilation solution, and the variability on ventilation rates. The SHTM further goes on to state that *'the variability is normally acceptable for general areas including office accommodation, general wards,….'*.

2.11.2 The mixed mode ventilation strategy was devised prior to Multiplex's involvement, with the BCRs requiring the minimisation of mechanical ventilation and use of natural ventilation (reference is made to paragraphs 5.26 and 8.5.3).

2.11.3 Multiplex were not involved in the production of the Reference Design EM. It would appear to include 4 ac/hr mechanically while taking advantage of natural ventilation effects when present. The 4 ac/hr mechanical ventilation appears to be that required to maintain the NHSL enhanced temperature range of 18 - 25°C for bedrooms as described within the Hulley & Kirkwood reference design Thermal Comfort Report. Multiplex is of the view that this could (along with any other factors considered to be relevant by NHSL) be a possible explanation for the selection of 4 ac/hr plus natural ventilation as designed by Hulley & Kirkwood and prescribed in the Project Agreement. Reference is made to item 5 and 15 in the Guidance Notes to the ITPD and Project Agreement EM and Guidance Note 26 of the Project Agreement EM.

2.12 "*12. In respect of the table below, do you agree that the following are areas of non-compliance with SHTM 03-01? To what extent would these issues have compromised patient safety?*"

2.12.1 As a preliminary point and for clarification, Multiplex would refer to Section 2 of its 5 November 2021 Response to the Inquiry's Request for Information Number 2, including that under the Project Agreement between NHSL and IHSL and the Construction Contract between IHSL and Multiplex, the design and installation of the ventilation systems for the RHCYP & DCN project which Multiplex

was to provide, was to comply with SHTM 03-01, except where a differing requirement was expressed by NHSL in the BCR's and/or required by the Room Data Sheets, as reviewed and approved by NHSL.

Non-compliance with SHTM 03-01 at financial close	Multiplex Comments
Multi-bed ward: SHTM 03-01 recommends 6ac/hr supply/natural ventilation for 'General Ward'. The EM provides for 4 ac/hr supply with extract via en-suite.	Generally concur that this statement aligns with SHTM 03-01 part A and the EM at Financial Close, although understanding of limitations in demonstrating air change rate when reliant on natural ventilation.
Multi-bed ward: SHTM 03-01 does not specify pressure regime. The EM provides for pressure to be positive to en-suite.	SHTM 03-01 Part A App A does not give criteria for multi bed ward – it gives criteria for general ward or single bedroom. General ward criteria within SHTM 03-01 Part A does not stipulate specific pressure requirement.
SHTM recommends temperature range of 18 – 28 degrees Celsius for single bedrooms and general wards. The EM provides for 18 – 25 degrees.	This aligns with Multiplex's understanding of SHTM 03-01 Part A, the Board's Construction Requirements and other contract documents stipulate more onerous criteria, hence the values of the tighter range in the EM.
Single bedrooms: SHTM 03-01 recommends 6ac/hr, EM recommends 4ac/hr	Generally, concur that this statement aligns with SHTM 03-01 part A. the EM at Financial Close required (rather than recommended) 4 mechanical ac/hr. The impact of natural ventilation and the methods of achieving i.e. S/E/N needs to also be considered.
Haematology/Oncology ward (which accommodates neutropenic patients). SHTM 03-01 recommends 10ac/hr supply and 10Pa (positive) pressure EM provides for: Bedrooms: 4ac/hr balanced pressure Isolation bedrooms: 10 ac/hr balanced pressure Multi-bed wards: 4ac/hr positive pressure	This aligns with Multiplex's understanding of SHTM 03-01Part A. EM statement about isolation room states supply of 10ac/h and balanced, however the type states supply air via lobby. EM also states multi bed as natural and central supply with 4 ac/h supply, extract via ensuite and positive pressure to ensuite.
Critical Care/HDU, single bed cubicles: SHTM 03-01 recommends 10ac/hr supply with positive pressure. The EM provides for 4ac/hr natural and central supply air, with extract via ensuite and balanced pressure	It should be noted that critical care and high dependency unit bed bays / single cubicles are not explicitly stated within App A of SHTM 03-01 Part A at time of developing brief / design. Section 8 of SHTM 03-01 Part A V3 (2022) now includes specific criteria for critical individual rooms and open bays.
Critical Care/HDU open plan bays: SHTM 03-01 recommends 10ac/hr supply with positive pressure. EM provides for 4ac/hr natural and central supply air with extract via en-suite and pressure positive to ensuite	It should be noted that critical care and high dependency unit bed bays / single cubicles are not explicitly stated within App A of SHTM 03-01 Part A at time of developing brief / design. Section 8 of SHTM 03-01 Part A V3 (2022) now includes specific criteria for critical individual rooms & open bays.

Non-compliance with SHTM 03-01 at financial close	Multiplex Comments
Critical Care/HDU isolation bedroom: SHTM 03-01 recommends 10ac/hr supply air, negative pressure and temperature 18-25 degrees Celsius. EM provides for isolation room with 10ac/hr, balanced pressure and temperature at 21-25 degrees Celsius. Also includes isolation room lobby which is not mentioned in SHTM 03-01	Under critical care areas, SHTM 03-01 Part A App A states isolation room **may** be negative pressure. For ward isolation rooms SHTM 03-01Part A App A, cross refers to SHPN 04 S1. Critical Care Units HBN 04-02 (2014) published as best practice guidance in Scotland states that *'ventilation system should provide source and protective isolation. A balanced supply and extract ventilation to isolation room and gowning lobby is, therefore, proposed.'*
Recovery Room (for operating theatres): SHTM 03-01 recommends 15ac/hr supply and extract with balanced pressure and temperature control range of 18-25 degrees Celsius. EM provides for 15ac/hr supply and extract and balanced pressure, but a 20 – 28 degrees Celsius temperature control range	This aligns with Multiplex's understanding of SHTM 03-01 Part A. In future revisions of the EM the temperature control range is changed to 20 - 25°C.

2.12.2 As set out previously, in terms of "*EM recommends*", adherence to the EM was mandated by NHSL, it was not a recommendation. This was used as the basis of the MEP design.

2.12.3 The EM at Financial Close, closely aligns with the reference design EM taking into account comments received from Mott MacDonald on behalf of NHSL. In versions post Financial Close the single bedrooms change to balanced pressure in-line with comments made by NHSL prior to Financial Close.

2.12.4 Multiplex is unable to assist the Inquiry in relation to matters of patient safety as that is a matter for suitably qualified clinical experts. In this regard, and by way of example, the Inquiry heard evidence from Mr Professor Humphreys that:

"*Controlled ventilation such as in isolation facilities is one component of preventing infection being spread or being acquired by patients via air.*"[21]

"*It is challenging to identify specially the exact contribution a controlled ventilated area may have in either preventing a patient acquiring infection or in general preventing infections being transmitted within a hospital, because ventilation is not used alone, but is part of a suite of preventative measures.*"[22]

2.13 "*13. Who reviewed the EM?*"

2.13.1 Multiplex is unable to assist the Inquiry in relation to the period prior to 11 March 2013.

2.13.2 In the period from 11 March 2013 to 5 March 2014 the EM was under the control of Mott MacDonald and NHSL.

21 Page 13 of Hearing commencing 9 May 2022 - Bundle 6 Expert Reports and Statement.
22 Page 14 of Hearing commencing 9 May 2022 - Bundle 6 Expert Reports and Statement.

2.13.3 In the period from 6 March 2014 to 13 February 2015 the EM was reviewed by Multiplex who deferred to Wallace Whittle as its specialist design consultant, Wallace Whittle, Mott MacDonald and NHSL reference is made to paragraph 2.1.4 above.

2.14 "*14. Was the EM reviewed by a healthcare planner, an Infection Prevention and Control nurse or expert, by clinicians or by Health Facilities Scotland? Please provide details.*"

2.14.1 Multiplex is unable to assist the Inquiry with this question. Communication to and from NHSL with regards to the EM was through Mott MacDonald.

3 Multiplex response to 'Narrative concerning the Reference Design of the Royal Hospital for Sick Children and Department for Clinical Neurosciences'

3.1 "*4.1 When was the Reference Design completed?*"

3.1.1 Multiplex is unable to assist the Inquiry with this question.

3.2 "*4.2 Room Data Sheets were a deliverable of the Reference Design Team. Why was the decision taken in May 2012 to cease production of Room Data Sheets?*"

3.2.1 Multiplex is unable to assist the Inquiry with this question.

3.3 "*4.3 When Room Data Sheet production was ceased, did the number of completed Room Data Sheets represent the majority of the development?*"

3.3.1 Multiplex is unable to assist the Inquiry with this question.

3.4 "*4.4 What were the Room Data Sheets referred to in Section 3.6.3 of ITPD Volume 3 and 'included in Schedule Part 6 Section 6'? Why were these given to bidders?*"

3.4.1 In regard to the first question, Room Data Sheets were not provided to the bidders. This was clarified at the bidder's day presentation on 13 December 2012, and reinforced within section 2.53 of the ITPD Volume 1 Revision B (noted at paragraph 2.4.1 above).

3.4.2 Multiplex is unable to assist the Inquiry with the second question.

3.5 "*4.5 Why was ventilation data provided in these Room Data Sheets if the preferred bidder had to verify it against functional requirements?*"

3.5.1 Reference is made to the response at paragraph 3.4.1 above.

3.5.2 Multiplex was not obliged to verify the ventilation data as the Reference Design EM was presented as defining NHSL's specific requirements.

3.6 "*4.6 Why was the Environmental Matrix from the capital phase of the project taken forward and developed under the NPD phase when, under that model, responsibility for environmental specifications was going to sit with the preferred bidder?*"

3.6.1 Multiplex is unable to assist the Inquiry with this question.

3.7 "*4.7 Where did the data within the Environmental Matrix come from? How was it arrived at?*"

3.7.1 Multiplex is unable to assist the Inquiry with this question in relation to the EM's prepared by NHSL.

3.7.2 Insofar as the EM issued on 29 September 2014 and on 31 October 2014 is concerned, the data came from NHSL.

3.8 "*4.8 The Inquiry understands that SG policy set out in HDL (2006) 58 and revised by CEL 19 (2010) mandated the use of ADB. It is further understood that ADB is typically used as the basis for producing project specific Room Data Sheets. However section 2.5.3 of ITPD Volume 1 (Reference Design and Mandatory Reference Design Requirements, Room Data Sheets) required bidders to incorporate the terms of the Environmental Matrix into Room Data sheets. Why were bidders to use the Environmental Matrix as the basis for producing Room Data Sheets rather than ADB?*"

3.8.1 Multiplex is unable to assist the Inquiry with this question.

3.9 "*4.9 HDL (2006) 58 and CEL 19 (2010) provided that an alternative to ADB could be used, so long as it was demonstrated that the alternative was of equal quality and value in its application as ADB. How was it demonstrated that the Environmental Matrix was of equal quality and value as ADB?*"

3.9.1 Multiplex is unable to assist the Inquiry with this question.

3.9.2 Multiplex understood that the EM defined NHSL's requirements and replaced the environmental data within ADB.

3.10 "*4.10 The Environmental Matrix features in ITPD Volume 1 Section 2.5 (Reference Design and Mandatory Reference Design Requirements), and ITPD Volume 3 presents the Environmental Matrix as mandatory for bidders to adopt. Why was this the case when the Reference Design was only to mandate Operational Functionality, and Operational Functionality was exclusively to be outlined in the Clinical Output Specification, the Schedule of Accommodation and the Adjacency Matrix?*"

3.10.1 Multiplex is unable to assist the Inquiry with this question.

3.10.2 Multiplex understood the EM was mandatory and that it set out NHSL's specific requirements for the RHSC & DCN project.

3.11 "*4.11 The Environmental Matrix derogated from the terms of SHTM 03-01. Was this derogation intended, and if so, was the decision to derogate documented and supplemented by a risk assessment?*"

3.11.1 Multiplex is unable to assist the Inquiry with this question.

3.11.2 Multiplex understood the EM represented NHSL's specific requirements for the RHSC & DCN project and so any derogation was intended. This was confirmed during the course of the project and as part of the Settlement Agreement and Supplemental Agreements between NHSL and IHSL and IHSL and Multiplex dated 22 February 2019.

3.12 "*4.12 Within the Room Information, the Reference Design contained ventilation requirements. Were these ventilation requirements approved by clinicians, IP&C specialists, or an Authorising Engineer (or an equivalent independent engineering professional) before the Reference Design was issued to bidders?*"

3.12.1 Multiplex is unable to assist the Inquiry with this question.

3.13 "*4.13 The Environmental Matrices of 2010 anticipated a bedroom ventilation design supplemented by openable windows. Why in 2015 did the Board confirm that the ventilation design should not rely on openable windows?*"

3.13.1 Mott MacDonald's response on 29 January 2015 (referred to at paragraph 2.1.4.11 above) was in relation to negative / positive pressure regime within the bedrooms, not air change rates.

3.14 "*4.14 The M&E Reference Design Approach paper provides that 'rooms will not be reliant on natural ventilation alone, unless they comply with maximum temperature limits listed in the RDS Environmental Matrices'. Were maximum temperature limits the decisive factor for how rooms would be ventilated?*"

3.14.1 Multiplex is unable to assist the Inquiry with this question, as they were not involved during this period, reference is made to paragraph 2.11.3 regarding Multiplex's current understanding of the impact of temperature on NHSL's ventilation strategy.

3.15 "*4.15 If it was intended that the preferred bidder would verify and develop the Environmental Matrix, how and where was this communicated?*"

3.15.1 Multiplex is unable to assist the Inquiry with this question as to NHSL's intentions.

3.15.2 Multiplex understood the EM was mandatory and that it set out NHSL's specific requirements for the RHSC & DCN project.

3.16 "*4.16 If one of the failed bidders changed ventilation data within the Environmental Matrix and brought this to the attention of NHSL, what was NHSL's response and why?*"

3.16.1 Multiplex is unable to assist the Inquiry with this question.

4 Multiplex response to 'List flagging gaps in paperwork and ambiguity surrounding final versions identified in the Reference Design paper'

4.1 Multiplex provides the following documents in response to the Inquiry's request:

4.1.1 Hullley and Kirkwood Consulting Engineers Ltd, 'Reference Design Stage BREEAM 2008/2011 Comparison and Project Implications' (September 2011, Issue No.2, Rev A);

4.1.2 Hulley and Kirkwood, 'Reference Design Stage: Section 6 SBEM Compliance Report Revision A' (17 February 2012);

4.1.3 NHS Lothian, 'Invitation to Participate in Dialogue Volume 1 Revision B' (17 April 2013);

4.1.4 NHS Lothian, ‘Invitation to Submit Final Tender’ (Volume 1, Revision A) (16 December 2013);

4.1.5 Wallace Whittle, ‘Air Movement Report For Single Bedrooms (Draft)’ (12 January 2015).

	Yes	**X**	**No**		**N/A**	

DRAFT

	healthcare facility inhibit the spread of infection?	With reference to national Guidance SHTMs, HBNs etc Infection Control Drawings have been produced and reviewed throughout the process up until FC.					
2.2	Is the ventilation system design fit for purpose, given the potential for infection spread via ventilation systems?	**Yes**		**No**	**x**	**N/A**	
		Some concern has been raised in relation to a potential issue with ventilation with regard to negative/balance pressure in single bed rooms. Awaiting drawings and further information to fully understand if there is a risk/issue.					
2.3	Has account been taken of the use of natural ventilation being affected by neighbourhood sources of environmental pollution as discussed in Development Stage 1?	**Yes**	**X**	**No**		**N/A**	
2.4	Is the interior of the healthcare facility easy to clean and maintain clean? (Surfaces of floors, walls and ceilings should be appropriate to the particular room and the required management of infection risk. Thus, carpeted floors in offices may be appropriate but not appropriate in clinical areas. There should be coving at right angle junctions of walls, floors and ceilings to ease effective cleaning.)	**Yes**	**X**	**No**		**N/A**	
		Throughout the process interior design has been discussed and meets HAI Scribe 30. No clinical area will have carpets in this building.					
2.5	Does each ward allow sufficient space between beds to comply with the current guidance, thus facilitating the healthcare services to the patient, which in turn may reduce HAI risk?	**Yes**	**X**	**No**		**N/A**	
		The distance between bed spaces in the multiple bed areas has been assessed throughout the process and meets guidance. Single room accommodation derogation was sought for both RHSC and DCN and approved by the SGHD.					
2.6	Are there facilities to enable high standards of hand hygiene to be maintained? For example, standards specified in: • 'Improving Clinical Care in Scotland Healthcare Associated Infection (HAI); Infection Control' (QIS 2003); • 'Standards Healthcare Associated Infection (HAI) Infection Control' (CSBS 2001).	**Yes**	**X**	**No**		**N/A**	
		Reviewed thoroughout detailed UGM's (April-July 2014).					
2.7	Where curtain rails and curtains are fitted are they easy to clean and maintain clean?	**Yes**	**X**	**No**		**N/A**	
		To be further developed through procurement phase.					

DRAFT

2.8 Is the toilet, bath and shower accommodation conveniently sited in relation to the ward and, where possible, is this accommodation en- suite?	**Yes**	**X**	**No**		**N/A**		
	This has been achieved and all relevant drawings have been signed off as operationally acceptable during the UGMs (Apr-July 2014).						
2.9 Is the toilet, bath and shower accommodation accessible for cleaning purposes and is the accommodation easily cleaned?	**Yes**	**X**	**No**		**N/A**		
	Will be compliant with SHTM 64.						
2.10 Does the ventilation of the toilet, bath and shower accommodation ensure extraction of air from the room to the outside air?	**Yes**	**X**	**No**		**N/A**		
	Exceeds guidance (3 to 10 air changes).						
2.11 Are the staff changing facilities suitably sited, have sufficient space, and readily accessible?	**Yes**	**X**	**No**		**N/A**		
	Various staff changing accommodation within building that meets relevant guidance. Signed off during UGM's (April - July 2014)						
2.12 Are the staff showering facilities suitably sited and readily accessible for use, particularly in the event of contamination incidents?	**Yes**	**X**	**No**		**N/A**		
	Showering facilities for staff to access in incidents requiring decontamination are sited in relevant departments (e.g. ED/Child Life and Health/Radiology Department /Helipad).						
2.13 Is there satisfactory provision of isolation facilities for infectious and potentially infectious patients?	**Yes**	**X**	**No**		**N/A**		
	Each ward area has the required number of isolation facilities.						
2.14 Is there separation of dirty areas from clean areas to minimise the risk of HAI contamination?	**Yes**	**X**	**No**		**N/A**		
	FM drawings illustrate the separation of dirty and clean areas. Drawings accepted at UGM's and FM Group.						
2.15 Is there sufficient storage accommodation provided in each area of the healthcare facility for equipment which is mobile and not in continuous use?	**Yes**	**X**	**No**		**N/A**		
	Sufficient storage accommodation has been provided in all departments to meet users needs (Mobile Hoists/wheelchairs etc).						
2.16 Are there satisfactory facilities for storage of	**Yes**	**X**	**No**		**N/A**		

DRAFT

cleaning equipment e.g. Domestic Services room?	DSR facilities provided in department areas that allow for the safe storage of materials.

DRAFT

2.17 Is the service ducting for utilities etc. concealed to ease routine cleaning of surfaces?	**Yes**	**X**	**No**		**N/A**	
	Integrated Plumbing System used to ease access for cleaning and identified on drawings. Bed Head trunking will conceal services.					
2.18 Does the service ducting for utilities provide sufficient access for maintenance and pest control?	**Yes**	**X**	**No**		**N/A**	
	Drawings show removable panels for access for maintenance and management of pest control. Further detail to be developed.					
2.19 Are there sufficient and conveniently sited facilities provided for the cleaning of common equipment like trolleys, wheelchairs etc?	**Yes**	**X**	**No**		**N/A**	
	Designated areas in specific departments to aid this process.					
2.20 Are the food preparation areas (including ward kitchens) and distribution systems fit for purpose and complying with current food safety and hygiene standards?	**Yes**	**X**	**No**		**N/A**	
	Specialist catering advisors involved in process to ensure areas fit for purpose on completion.					
2.21 Are waste management facilities and systems robust and fit for purpose? (This includes local and central storage, systems for movement of waste to central storage, systems for handling and compaction of waste, systems for separation and security of waste, especially healthcare clinical waste.)	**Yes**	**X**	**No**		**N/A**	
	Segregated waste areas provided and further detail to follow as part of the RDD process.					
2.22 Is the water distribution system designed to discourage bacterial growth and to ensure delivery of hot and cold water to users at the appropriate temperatures?	**Yes**	**X**	**No**		**N/A**	
	Further detail to follow as part of the RDD process.					
2.23 Is the drainage system design, especially within the healthcare facility building, fit for purpose with access points for maintenance carefully sited to minimise HAI risk?	**Yes**	**X**	**No**		**N/A**	
	Further detail to be provided through RDD process.					

DRAFT

2.24	Are there satisfactory arrangements for effective management of laundry? (This includes local and central storage, systems for movement of laundry to central storage, systems for handling laundry, systems for separation and security of laundry, especially contaminated laundry.)	**Yes**	**X**	**No**		**N/A**	
		Areas identified to manage all laundry types.					
2.25	Are there sufficient and suitably sited facilities for bed pan washing/disposal?	**Yes**	**X**	**No**		**N/A**	
		Each clinical area has a dirty utility room with access to facilities for bed pan washing/disposal where relevant.					

The answers to the above questions should be 'yes'. Where a potential hazard is identified a careful assessment of that hazard must be undertaken.

IHS LOTHIAN
INTEGRATED HEALTH SOLUTIONS

Photovoltaic Panels	
Area (m2)	800
Type	Polycrystalline
Nominal Efficiency (%)	15
Nominal Cell Temperature (oC)	45
Temperature Coefficient	0.004
Electrical Conversion Efficiency (%)	95
Inclination Angle (deg)	30
Angle from North (deg)	180.0 (South)

IHS LOTHIAN
INTEGRATED HEALTH SOLUTIONS

Combined Heat and Power	
Fuel	**Natural Gas**
Performance Rated Output (%)	100
Heat Output (kW)	654
Thermal Efficiency (%)	44
Electrical Efficiency (%)	40
Performance Minimum Output (%)	50
Thermal Efficiency (%)	48
Electrical Efficiency (%)	36.5
Profile	On Continuously

Allow maintenance downtime	1 day per 6 months

IHS LOTHIAN
INTEGRATED HEALTH SOLUTIONS

Building Element	**U-value**	
External Wall	0.20	(W/m2K)
Ground Floor	0.20	(W/m2K)
Roof	0.15	(W/m2K)
Window	1.60	(W/m2K)
Rooflight	2.00	(W/m2K)

G-value Window	North 0.64
G-value Window	West/South/East 0.50 (maximum)
Window Daylight Transmission	0.76 (minimum)

IHS LOTHIAN
INTEGRATED HEALTH SOLUTIONS

External Lighting Load estimated to be 20,000W

Total daily hot water consumption	11475	Litres

CIBSE Guide G Public Health Engineering (CIBSE, 2004) Table 2.10 includes daily hot water use for various types of buildings. We have taken an average figure of 155 L/person/day based on the different mix of Hospital building wards. This figure has been selected based on Engineering knowledge and experience of similar projects. We have applied this daily DHW figure to the number of beds in the proposed building. We have also allowed for catering DHW, with the assumption that 3 meals will be provided per day.
We have developed the DHW profile based on Engineering judgement of how we expect the building to operate. Peak DHW usage are expected to occur during the morning and evenings when showers is assumed to be the peak DHW demand.
The figures have been used to calculate the total mass of hot water use per year by multiplying the values by the number of beds and meals and the days that the building is occupied.
The following details our calculation to evaluate the daily DHW usage.

Re-Provision of RHSC and DCN at Little France

1. INTRODUCTION

The holistic design approach delivers a passive, energy efficient and green design. The passive design measures, energy efficiency initiatives and Low and Zero Carbon Generating Technology (LZCGT) reduce resource demand which delivers the required energy and carbon savings to meet and improve on the Building Standards.

In this Project, a holistic and integrated design process has been adopted from the very early design stage through to the completion of the Project as well as interfacing with thermal and efficiency testing procedures and metering strategies. The resulting design reflects an environmentally, socially, and financially responsible design, and includes fully integrated architecture and MEP systems to achieve high performance, sustainable, and optimised design. A Dynamic Simulation Modelling (DSM) tool has been employed to investigate various design strategies and proposals in order to achieve design targets. A 3D dynamic simulation model using the approved DSM software IES VE 2012 has been created to simulate the energy hierarchy and to demonstrate compliance with Scottish Building Regulations (Section 6) as well as to determine the BREEAM Ene01 credit achieved. The 3D dynamic simulation model is regarded as a live energy model, which has been and will continue to be regularly updated as the Project progresses through to handover. The milestones of the model update procedure will follow the stages of the Project. The compliance with the Scottish Building Regulations (Section 6) will be issued for building warrant and the Scottish EPC will be issued upon building handover. During the post Financial Close the model will be continually developed and updated to take account of developments to the design and to ensure that the design is maintained to meet the Project requirements.

In addition, the 3D IES VE model will be used in conjunction with metering strategies and thermal and efficiency testing procedure so that the simulation model can be calibrated simultaneously to bridge the performance gap between predicted simulation results and actual performance results based on measured data. The thermal efficiency of the building system will be monitored through a combination of measurement data derived from BMS and additional physical monitoring sensors. The BMS will be configured to provide complete continuous internal data on a zone basis and the metered data will be imported to the 3D simulation model for calibration and model updating purpose.

This document should be read in conjunction with Schedule Part 12 Section 4 – Energy Strategy.

The proposed building has been divided into 2 blocks as Block A and Block B, as shown in figures below. The model iterations have been used to educate the design process with building fabric U values and solar performance amended for optimum compliance.

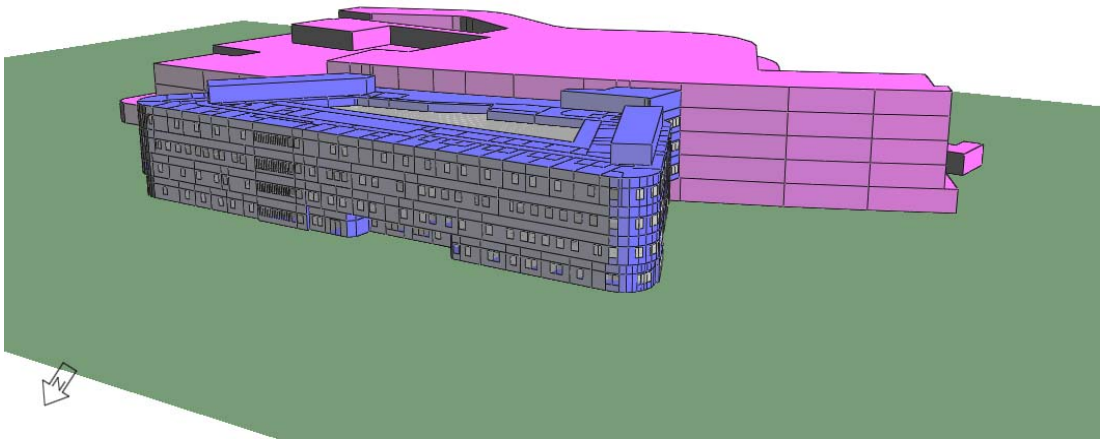

Figure 1: 3D Model of RHSC and DCN – Block A

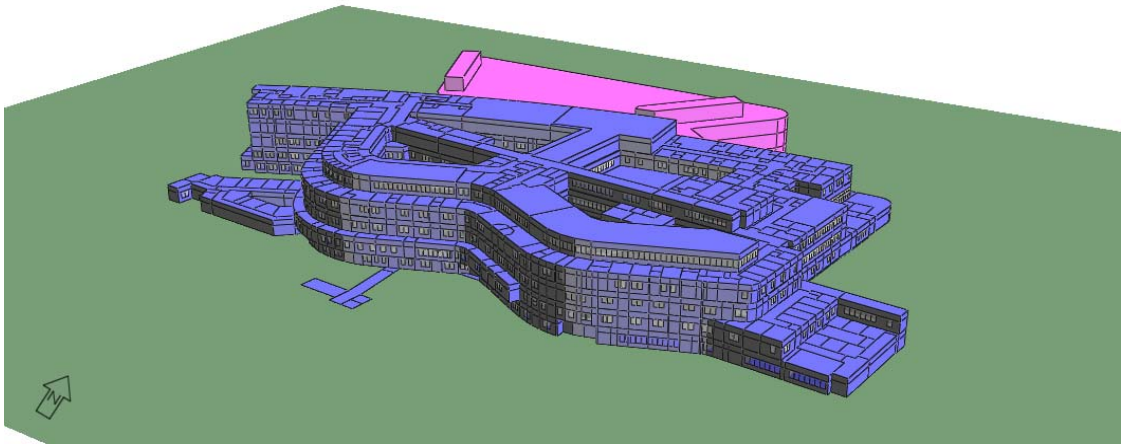

Figure 2: 3D Model of RHSC and DCN – Block B

2. SUSTAINABILITY

2.1 Introduction

The energy hierarchy approach in the design of the building for the facility allows the development to meet and better the carbon reduction requirements of Section 6 (Energy) of the 2013 Scottish Building Standards and achieve a Silver rating under Section 7 (Sustainability) of the 2013 Scottish Building Standards.

The development also meets the sustainability principles set out in the Edinburgh Standards for Sustainability as detailed in the document issued by the Edinburgh City Council "Edinburgh Standards for Sustainable Buildings - Section 3.2 Principles & Standards for Sustainable Building – Key Recommendation details the requirements to meet the standards".

The Project increases the overall energy efficiency of the development through energy efficient design and management. The energy strategy optimises the incorporation of energy efficiency measures into the facility and meets the 2013 Scottish Building Standards carbon reduction requirements. An IES model has been set-up for 2013 Scottish Technical Standards for Section 6 Compliance and EPC. In order to achieve the ENE1 BREEAM credit the IES model has also been simulated using England and Wales Part L2A 2010 methodology.

We will provide a thermally comfortable environment maximising available natural daylighting where the room type and geometry permits and minimising environmental impact, at construction stage and through the facility's lifecycle.

The energy hierarchy adopts passive design features to lower the baseline energy demand, utilises energy efficient building systems and controls before adopting low and zero carbon technologies to reduce carbon emissions further.

This holistic approach in designing the facility and its systems provides reliable low energy and low carbon solutions, which complement the healthcare environment and the needs of the facility users.

2.2 Energy & Resource Conservation

Our design achieves energy and resource conservation through the following prescriptive energy and carbon reduction. Please refer to the document "4.11 – BREEAM Assessment – Issue 2" for additional information on meeting the requirements for BREEAM Ene01.

- 8 credits for Ene01 reduction of emissions in the BREEAM assessment have been achieved (demonstrated through Part L2A 2010 assessment using the BREEAM Ene01 calculator, as explained in the following sections of this document),
- 23.21% of the Sites energy is provided by low carbon and renewable energy sources – Natural Gas Combined Heat and Power (CHP) (derogation submitted regarding the use of Natural Gas CHP in place of a renewable technology) and Solar Photovoltaic Panels. Please refer to electronic document "RHSC DCN IHS Lothian Energy Calculations – Financial Close" for the calculation.
- Scottish Technical Standards 2013 Section 6 Compliance
- Scottish Technical Standards Section 7
- Aspect Silver Level 1: carbon dioxide emissions (Building Emission Rate) are to be 28.6% lower than the Target Emission Rate (TER) set by the 2010 standards. Please refer to electronic document of "RHSC DCN IHS Lothian Energy Calculations – Financial Close" for the calculation
- Edinburgh Council Standard for Sustainable Buildings
- The delivered energy usage for development has achieved design target proposal at Financial Close of 49 GJ/100m^3 of EnCO2de which is less than 55 GJ/100m^3, hence it has met the requirement set by the Scottish Health Technical Memorandum 07-02.

2.3 Energy Approach

2.3.1 Passive Design

The following passive design measures are included

- High performance façade solution with low U-Values and solar transmittance. Details of U-values and solar transmittance refer to the electronic document of "RHSC DCN IHS Lothian Energy Model Input Data – Financial Close".
    - External Wall – 0.20 w/m^{2}k
    - Ground Floor – 0.20 w/m^{2}k
    - Roof – 0.15 w/m^{2}k
    - Window – 1.60 w/m^{2}k
    - Rooflight – 2.00 w/m^{2}k
    - G-Value Window – 0.64 (Block A)
      0.50 (Block B)
    - Window Light Transmission – 0.76
- Low air permeability - the air permeability target value used in the model is 5.
- Size of glazing openings has been examined and proposed through early development with the architect. The proposed glazing strategy will vary according to room activity for each space. The main occupied areas glazed openings are based on the architects practical knowledge of fenestration and our experience of solutions that achieve the balance of natural daylight and reducing unwanted solar gains. Solar controlled glazing is applied to the east, south and west facing facades to reduce the risk of overheating.
- Consideration of building orientation has been taken into account during the early building design process. Due to the shape and complexity of the building geometry and with the repetitiveness of the glazing area along all façades, adjustments to the building orientation will not have a large impact on improving the building energy performance. For example, when rotating the building by 45 degrees, the total energy consumption of some rooms have decreased, but increases in other rooms and the total energy consumption of the whole building has not changed greatly. As mentioned above, the glazing area was determined by the room activity of each space and the balance of glazing proposed does not merit solar shading devices to be used in the building design.
- Thermal mass has been considered as a strategy, which has been achieved through the concrete slab construction. In order to achieve maximum heat absorption, the surface is proposed to be designed as:
    - be 100-200mm thick to provide sufficient mass for optimal heat storage
    - be insulated underneath the slab or on the exterior face of external walls
- Natural ventilation has been incorporated and working in conjunction with mechanical ventilation (mixed mode ventilation) for perimeter rooms in the facility. The natural ventilation is to be operated through openable windows. The strategy is to use natural ventilation whenever it is feasible or desirable, to maximize comfort. To avoid the risk of over cooling, change-over designs have been adopted, where the facility "changes-over" between natural ventilation and mechanical ventilation on a seasonal or even daily basis. No pollution sources have been identified nearby the Site and additionally the building site is located in a suburban tree lined environment, therefore the proposed natural ventilation strategy is feasible. Details of rooms designed with mixed mode ventilation refer to the electronic document "RHSC DCN IHS Lothian Operational Energy Model Input Data – Financial Close".

2.3.2 Energy Efficiency

The following energy efficient building systems are included and for details of the values assigned in the simulation model; refer to the electronic document “RHSC DCN IHS Lothian Operational Dynamic Energy Model Input Data – Financial Close”. For technical information of how these energy efficiency systems operate in the building refer to PCP document “Section 4.9 Mechanical & Electrical Engineering”.

- Reduced lighting power densities / high efficiency fluorescents and the use of 50% LED lighting;
- Presence detection – auto on/off sensors are applied; refer to the electronic document “RHSC DCN IHS Lothian Operational Energy Model Input Data – Financial Close”;
- Low specific fan powers refer to the electronic document “RHSC DCN IHS Lothian Operational Energy Model Input Data – Financial Close”;
- Mechanical ventilation units incorporating heat recovery minimum 60%;
- Variable speed pumps with multiple pressure sensors on all main circulating heating and cooling pumps;
- Building controls to ensure the optimum performance of the systems; refer to PCP document “Section 4.9 Mechanical & Electrical Engineering”;
- Metering and sub-metering to allow better management of energy uses all thermal and electrical energy to be sub-metered; refer to PCP document “Section 4.9 Mechanical & Electrical Engineering”;
- Low loss transformers and power factor correction >0.95 refer to PCP document “Section 4.9 Mechanical & Electrical Engineering”;
- Free cooling chillers using air cooled chillers refer to PCP document “Section 4.9 Mechanical & Electrical Engineering”.

2.3.3 LZCT

The following low and zero carbon measures are included.

- Gas fired Combined Heat and Power (CHP), detailed as the table below:

Table 1 – Combined Heat and Power detail

Combined Heat and Power	
Fuel	**Natural Gas**
Performance Rated Output (%)	100
Heat Output (kW)	654
Thermal Efficiency (%)	44
Electrical Efficiency (%)	40
Performance Minimum Output (%)	50
Thermal Efficiency (%)	48
Electrical Efficiency (%)	36.5
Profile	G1547_CHP_Annual

The model allows 1 day CHP downtime every 6 months for maintenance. For details of how CHP is operated in different seasons and loads refer to Appendix 4.8 CHP Utilisation Strategy.

- Solar Photovoltaic’s (PV) providing electricity for use within the facility, detailed as the table below:

Table 2 – Photovoltaic Panels detail PV setup

Photovoltaic Panels	
Area (m2)	800
Type	Polycrystalline
Nominal Efficiency (%)	15
Nominal Cell Temperature (oC)	45
Temperature Coefficient	0.004
Electrical Conversion Efficiency (%)	95
Inclination Angle (deg)	30
Angle from North (deg)	180.0 (South)

2.4 Scottish Technical Standards Section 6 Compliance

Section 6 (Energy) of the Scottish Building Regulations aims to ensure that effective measures for the conservation of fuel and power are incorporated in buildings. In addition to limiting energy demand through specification of the performance of building fabric and building services, a carbon dioxide emissions standard (Standard 6.1) obliges designers of new buildings to consider building performance in a holistic manner.

The Scottish Building Regulations Technical Standards Section 6 (Energy) details the calculation methodology and the modeling has been carried out in accordance to the methodology and the modeling has been carried out in accordance to the methodology using approved DSM software IES.

The TER with the benchmark applied must be achieved but the inclusion of LZC technologies is not mandatory.

UK calculation tools conform with European Directive 2002/91/EC and are to be used with the carbon dioxide emissions standard and in the production of Energy Performance Certificates (EPCs). For non-domestic buildings, the National Calculation Method (NCM) is used.

Dynamic Simulation Model (DSM) primarily applies to building analysis software that can model the thermal dynamic response of buildings. These software tools can be used both to demonstrate compliance with Standard 6.1 of the Building Regulations and for producing EPCs.

Approved software IES VE 2012 demonstrates that Project Co will achieve compliance with Section 6 of the Scottish Technical Standards refer to PCP document “Section 4.9 Mechanical & Electrical Engineering”.

Appendix 4.1 of this document includes the Section 6 BRUKL report. The table below summarises the results of the compliance analysis:

Table 3 Summary results of the Section 6 carbon dioxide emission

Block	Section 6 Target Emission Rate (TER) kgCO2/m^2	Section 6 Building Emission Rate (BER) kgCO2/m^2	Section 6 Compliance?
A	45.9	31.1	Yes
B	37.4	27.0	Yes

2.5 Scottish Energy Performance Certificate

The Energy Performance Certificate (EPC) has been introduced through European legislation and the Energy Performance of Buildings Directive (EPBD). The certificate provides an illustration of the energy efficiency of a building based on standard assertions for occupation and use. The EPC shows the rating range for a building as **A-G**, with **A** being the most efficient.

Standard 6.9 of the Scottish Technical Standards note that every building must be designed and constructed in such a way that:

a. an energy performance certificate for the building is affixed to the building.

b. the energy performance certificate is displayed in a prominent place within the building.

The certification must be carried out using the Directive compliant methodology and the calculation tool, which was used to assess compliance with Standard 6.1.

Using the approved software, IES VE 2012 predicts that Project Co will achieve a minimum EPC rating of C.

Appendix 4.2 of this document includes the draft EPC.

2.6 Section 7 Compliance

The Energy Strategy allows the development to comply with Section 7 Aspect Silver 1 Level.

The standard sets out to encourage developments to go beyond the minimum standards of sustainability required within the Building Standards Sections 1 to 6. Details refer to *Technical Handbook: Non-domestic – Sustainability* for additional guidance on the ratings applicable.

The aim of the standard is to:

- Recognise the level of sustainability already achieved, as compliance with the 2010 regulations is the benchmark level.
- Encourage more demanding sustainable standards.
- Encourage consistency between planning authorities that use supplementary guidance to promote higher levels of sustainability.

The standard will provide a sustainability "label" to the building, which will require to be displayed prior to completion as per an EPC certificate.

A building at this first optional upper level (in this aspect only) should meet all the standards in sections 1 – 6 that apply to the building for the bronze level and in addition, the building should comply with the following:

Carbon dioxide emissions – Under the guidance to standard 6.1, carbon dioxide emissions (Building Emission Rate) is to be 28.6% lower than the Target Emission Rate (TER) set by the 2010 standards. To establish this, the TER from NCM calculation should be multiplied by 0.714, to give a revised figure that the BER should not exceed.

Approved software IES VE 2012 demonstrates that Project Co will achieve compliance with Section 6 of the Scottish Technical Standards.

Appendix 4.1 of this schedule includes the Section 6 BRUKL report. The table below summarises the results of the compliance analysis:

The Energy Strategy allows the development to comply with Section 7 Aspect Silver 1 as summarised below:

The two models Block A and B results have been multiplied by an appropriate weighting factor based on the building floor area to calculate the average carbon emissions figures from Block A and B results. Refer to the document of "RHSC DCN IHS Lothian Energy Calculations – Financial Close".

Table 4 Summary of the average Section 6 compliance results for the overall building with appropriate weighting factor applied.

Block	Section 6 Target Emission Rate (TER) kgCO2/m2	Section 6 Building Emission Rate (BER) kgCO2/m2	Section 7 Improvement (Target 28.6%)
All	39.10	27.82	28.84%

2.7 Edinburgh Council Standard for Sustainable Buildings

The aim of the Edinburgh Standards for Sustainable Building is to promote sustainable development that mitigates against climate changes caused by carbon emissions.

Planning application now have to be accompanied by a sustainability statement which details how the applicant proposes to meet the sustainability standards. The standards are divided according to six key principles/themes;

1. Design quality
2. Inclusive, safe and healthy environments
3. Reduction of climate change and increase of renewables
4. Use of sustainable resources and materials
5. Reduction of pollution and increase of recycling
6. Improvement in sustainable construction and operation

To ensure the standards are met the sustainability statement poses a series of questions under each principle, with the applicant's response to the each question being evaluated and scored. The applicant must reach a minimum threshold of points for each section/principle with the scoring system based generally on whether the standard is met or not. The minimum threshold of points that must be obtained can vary depending upon the type, location and importance of the proposed development.

There are however, two mandatory standards under the third principle which have been met.

- CO^2 emissions from the development are at least 5% lower than the Target Carbon Dioxide Emissions Rating (TER).
- A minimum of 10% of the energy requirement for the development is to be supplied by renewable energy generation.

Project Co have provided input to the Edinburgh Standards for Sustainable Building S1 form. This sustainability statement has now been submitted to the City of Edinburgh Council to discharge planning condition No. 1(j). Please refer to Appendix 4.3 Edinburgh Standards for Sustainable Building S1 form.

Derogation has been submitted regarding the use of natural gas fuelled CHP in place of renewable technology.

2.8 Scottish Health Technical Memorandum 07-02

The Scottish Health Technical Memorandum 07-02 (EnCO2de) requires that the delivered energy usage for the development is less than 55 GJ/100m^3. The Financial Close Energy Model has achieved 49 GJ/100m^3.

Compliance has been achieved and this is confirmed by the operational models provided which have been combined with additional energy consuming systems not included within the model, namely – lifts, catering, freezers and external lighting.

The combined energy model results are detailed in the electronic document ‘RHSC DCN IHS Lothian Operational Energy Model – Financial Close’.

The allowances and operational details, as entered into the dynamic model, are detailed in the electronic document ‘RHSC DCN IHS Lothian Energy Model Input Data-Financial Close’ and Appendix 4.4 ‘Energy Model Inputs Templates – Financial Close’.

2.9 Ene01 Reduction of Emissions BREEAM Assessment

The energy strategy for the development achieves a minimum of 6 credits for issue Ene 01 Reduction of CO_2 emissions.

The following outputs have been assessed for the calculation of the credit:

- Energy demand for the facility.
- Energy consumption for the facility.

- CO_2 emissions for the facility.

Using the above an Energy Performance Ratio for New Constructions (EPR_{NC}) is generated for the development which is then judged against benchmark scales using the English Building Regulations Approved Document Part L 2A.

The Financial Close Energy Model has achieved 8 credits and demonstrated a 25% reduction in CO_2 emissions under Part L2A 2010 arising from regulated building energy consumption. Refer to Appendix 4.5 'BREEAM Ene01 Compliance Checker Calculator" for details. A weighted factor that has been applied to both Block A and B Part L results to determine the 25% reduction.

Refer to document '4.11 – BREEAM Assessment" for further information on BREEAM credits.

2.10 Potable Water Consumption

Potable water consumption for the Facilities will not exceed 170,000 litres/bed/annum.

As per the SHTM 01-01 Water Safety for Healthcare Premises the development, construction, installation and maintenance of hot and cold water supply systems are vital for public health.

Healthcare premises are dependent upon water to maintain hygiene and a comfortable environment for patients and staff, and for clinical and surgical care.

Since the interruption of water supply can disrupt healthcare activities the design of systems must ensure that sufficient reserve water storage is available to minimise the consequence of disruption, while at the same time ensuring an adequate turnover of water to prevent stagnation in storage and distribution vessels.

Water provision to the Project will be fully compliant with the SHTM 04-01 and will achieve two credits on BREEAM Wat-01 Water Consumption. The core water provision will be maintained with the improvements and water saving measures based on:

- Reduced water consumption through specification of water efficient fittings. The fittings will allow the Project to achieve Performance Level 2 within BREEAM credit Wat-01.
- Metering of water consumption and provision of leak detection systems to achieve BREEAM credits Wat-02 and Wat-03.
- Motorised valves on water distribution to toilets controlled via presence detectors to minimise water wastage i.e. room occupied water available, room unoccupied water not available to achieve BREEAM credit Wat-03.
- Water efficient fittings in line with BREEAM credit Wat-01.

Please refer to "*4.11 – BREEAM Assessment*" for further explanation of BREEAM credits.

3. OPERATIONAL ENERGY MODEL

3.1 Introduction

This section details the methodology and results of the Energy Model. The results detailed in this document are based on a combination of actual data, NCM values and a competent engineer's knowledge of building services. The model has used actual equipment efficiencies proposed for the facility. However, these figures should not be deemed to give 100% accuracy and thus should not be used for detailed energy reference. The data detailed in this document will be a guide only to evaluate the actual energy consumption of the facility and may include data collected from analysis of previous projects.

The results given in this report are based on the output of a complex, dynamic thermal model which takes account of predicted data; relating to plant and systems, published data and theoretical judgement with regards to the following design criteria; building orientation, geometry and fabric, climate data, internal gains and occupancy profiles, plant efficiencies and operational hours. Although actual data and design parameters have been used during this detailed analysis, there is still a large amount of uncertainty. Certain information that will affect the 'true' energy consumption of the facility include, occupancy times, behaviour characteristics of the occupants and detailed information on services. The outputs from the model contain theoretical and actual data and indicate a better indication of the thermal performance of the facility throughout the year compared to the facility based on NCM values.

In addition to these assumptions and any stated facility usage characteristics, the importance of user diligence should be highlighted as the simulation is modelled on this principal. Diligent use of space involves users not leaving equipment (computers), heating and lighting switched on all the time.

Dynamic Simulation Models (DSM) contain inherent simplifications and assumptions compared to the way that a real building would operate. For example, DSM use a simplified approach for the heat flow through the ground floor slab with an assumed ground temperature, U-values are static, when they are actually dynamic and change with temperature and other climatic conditions and use standard weather data sets based on historic weather data, which will be different from the conditions in any given year that the facility is operating.

3.2 Modelling Methodology

The general procedure for this investigation comprises the creation of a 3D geometrical model of the proposed building using approved Integrated Environmental Solutions Virtual Environment 2012 (IES VE 2012). This is referred to as IES.

The methodology set out proposes that the energy use of complex systems heating, cooling, humidification, ventilation systems should be evaluated using some form of dynamic simulation model (DSM).

DSM should provide a better estimate of energy use compared to steady state calculations as they take into account more of the complexities of the variation in energy use across the year.

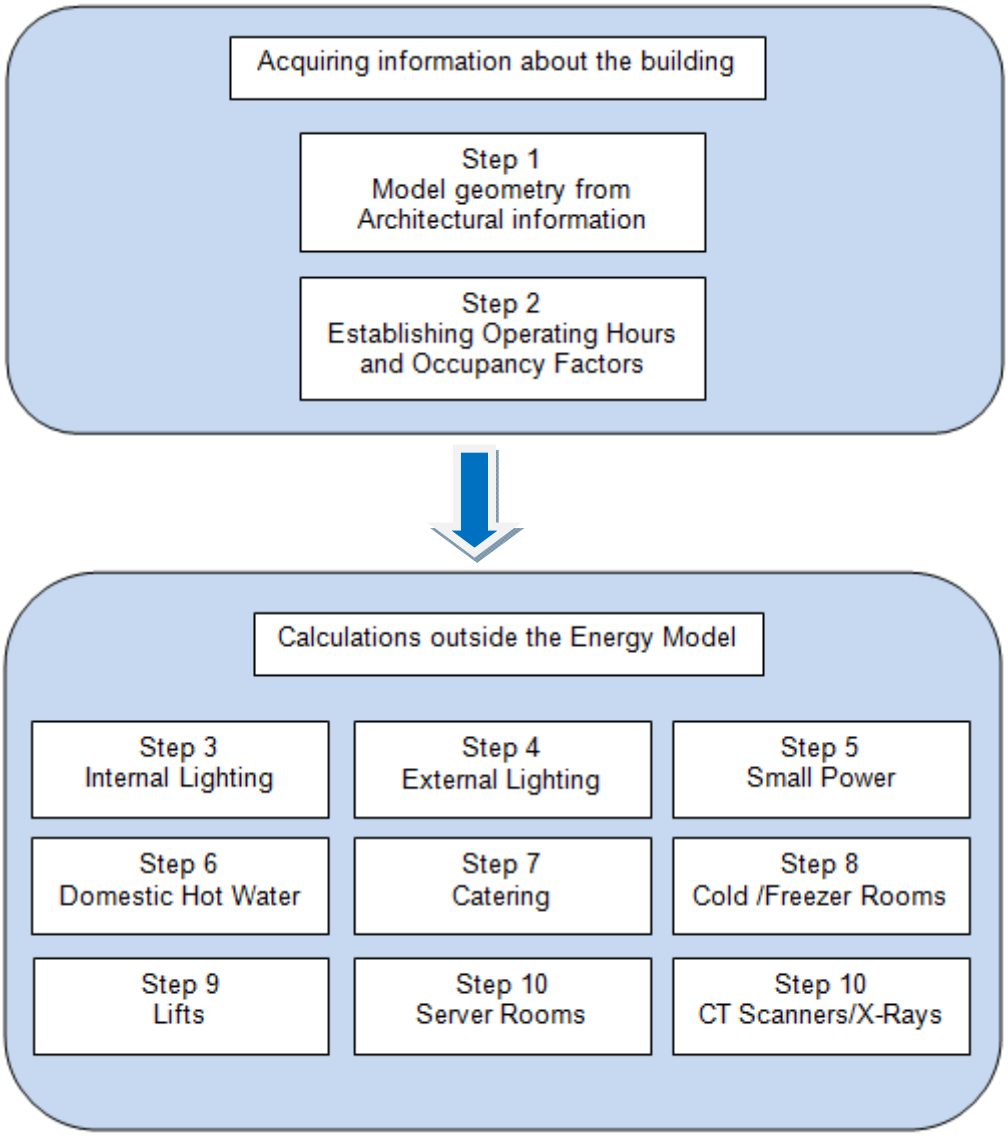
The model has been zoned and internal conditions (heat gains and environmental controls) and constructional building elements attributed to the model. This building model allows simulation results to be obtained for:

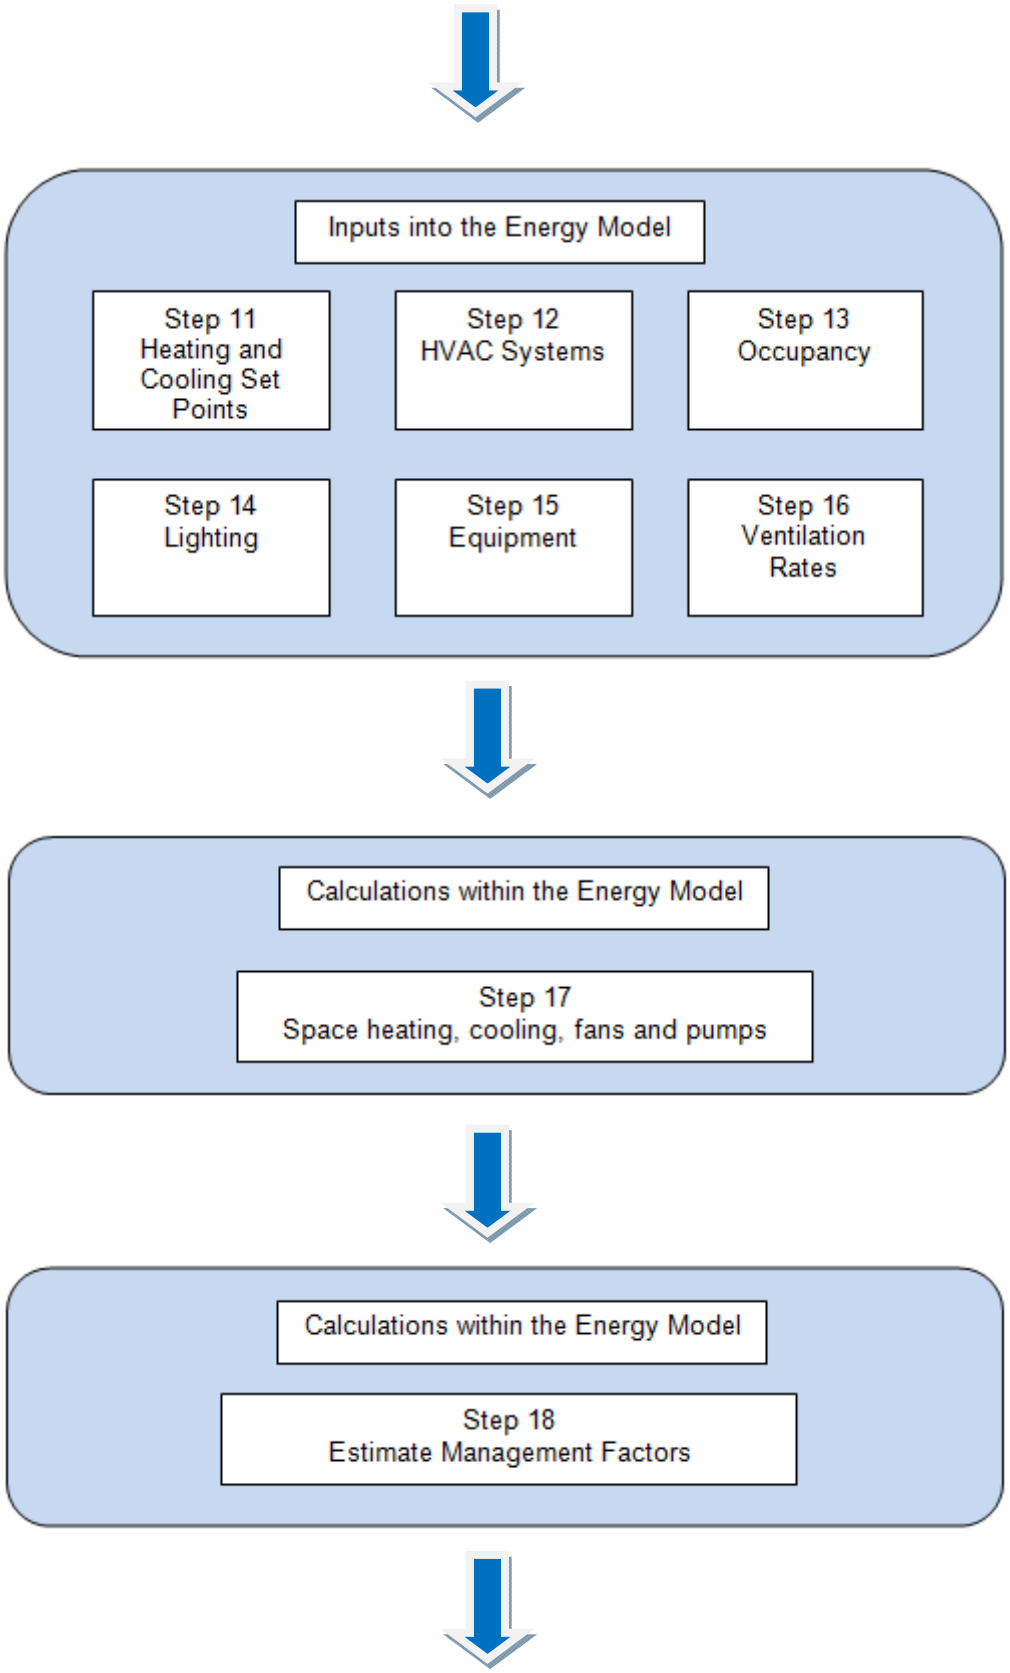
- Total natural gas
- Total electricity usage
- Boiler Loads
- CHP generated heat
- DHW heating demand
- Total Building energy

- Total carbon emission
- Model Construction

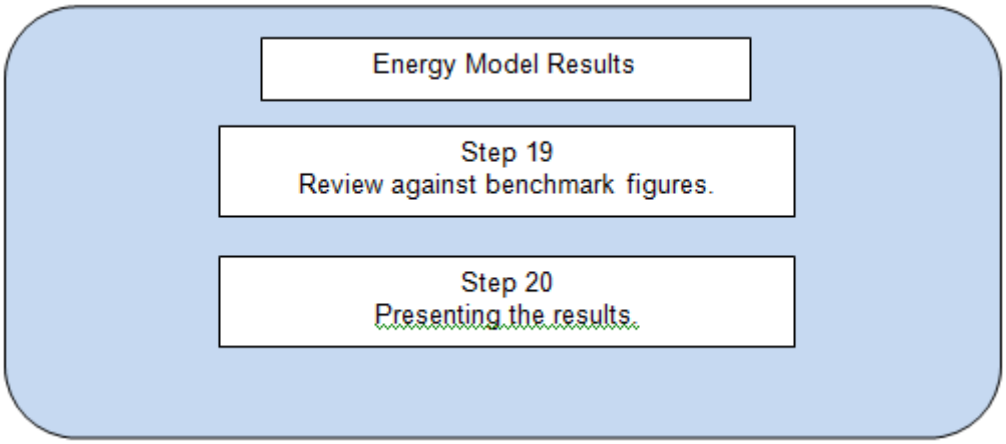
A 3D model of the design building has been constructed within IES VE 2012. The building model zoned into separate areas dependant on function and building type.

The flow chart below details the methodology approach adopted to evaluate the operational energy of the building.





Inputs into the Energy Model
Step 11
Heating and Cooling Set Points
Step 12
HVAC Systems
Step 13
Occupancy
Step 14
Lighting
Step 15
Equipment
Step 16
Ventilation Rates
Calculations within the Energy Model
Step 17
Space heating, cooling, fans and pumps
Calculations within the Energy Model
Step 18
Estimate Management Factors



3.2.1 Model Attribution

In order to collect accurate data, the model has been fully attributed with respect to it's building elements, climatic data and internal conditions, as detailed in the electronic document of "RHSC DCN IHS Lothian Energy Model Input Data – Financial Close" and Appendix 4.4 'Energy Model Inputs Templates – Financial Close'.

3.2.2 Building Elements

Each building element is specified with a material construction of close approximation to the design building. Construction elements have been developed from the proposed architectural details, as shown in the electronic document of "RHSC DCN IHS Lothian Energy Model Input Data – Financial Close".

Another important parameter that has been considered regarding construction details is the glazing solar transmission value (g-value). The g-value is the sum of the direct and reflected solar radiation through glazing. The lower the g-value the lower the solar penetration. The g-value used in the model for north facing glazing (Block A) has a value of 0.64 and the remainder of the glazing on the other facades (south, east and west facing) uses glazing with a g-value of 0.5 (Block B).

3.2.3 Climatic Data

The facility performance has been calculated as it is exposed to climate, occupants and conditioning systems to produce predictions of the temperatures within the space. In order for these predictions to be as precise as possible it is vital that accurate weather data is selected for the simulation.

The simulation weather data used is CIBSE Edinburgh TRY weather file.

It must be noted that variations in weather conditions will have implications on the energy used within the facility. A severe winter is likely to result in increased heating demand on the facility.

3.2.4 Internal Conditions

The main building type has been modelled as a hospital. There are NCM (national calculation methodology) internal conditions available within the simulation that allows figures for the occupants, lighting, miscellaneous, auxiliary ventilation and infiltration rates to be applied to the building. The templates applied to each zone depends on the type of building and the activity within the space, as detailed in the electronic document of "RHSC DCN IHS Lothian Energy Model Input Data – Financial Close" and Appendix 4.4 'Energy Model Inputs Templates – Financial Close'

A detailed analysis was required to ascertain accurate data on the energy loads of the facility and many profiles were created to simulate "actual" internal conditions.

A profile details the time and diversity factor of the internal gain in question and has been used to simulate activity within a room, dependant on the day of the week.

3.3 Model geometry from Architectural information

The model is based on the architectural revit geometry.

The model geometry has been divided into two blocks as Block A and Block B, as shown in figures 1 and 2 in Section 1 of this document.

3.4 Establishing Operating Hours and Occupancy Factors

The hours of operation have been estimated by establishing the occupancy or operating hours of the facility and the way that the facility is to be managed. Consideration has been taken in terms of determining more realistic hours of occupation and the likely run-hours of the plant and equipment in the building e.g. extended hours of operation.

The results detailed in this schedule have been based on a combination of actual data, NCM values and a competent engineer's knowledge of building services, as detailed in the electronic document of 'RHSC DCN IHS Lothian Energy Model Input Data – Financial Close' and Appendix 4.4 Energy Model Inputs Templates – Financial Close.

3.5 Evaluating Internal Lighting Energy Use

Low energy light fittings and the lamp sources have been selected to meet the overall lighting design requirements. We have utilised Light Emitting Diodes (LED) sources within 50% of the luminaries with high efficiency T5 Eco lamps (except RA90 requirements) being used elsewhere. Project Co. lighting manufacturer has confirmed the internal lighting power density figures (W/m^2/100lux), provided for all room types are listed in the electronic document of 'RHSC DCN IHS Lothian Energy Model Input Data – Financial Close'

3.6 Evaluating Energy Use for External Lighting

The proposed external lighting scheme has been used to determine the number of light fittings. The total watts for the external lighting has been calculated based on the proposed light fittings detail. Refer to PCP document "Section 4.9 Mechanical & Electrical Engineering" for energy efficiency of the luminaires. To evaluate the likely number of hours that the lights shall operate over a given year we have used both the CIBSE Edinburgh Test Reference Year (TRY) and Design Summer Year (DSY) to determine the number of daylight hours for the year. This has been determined by analysing the sunrise and sunset hours. We have then calculated the total annual energy use for external lighting utilising this data. The calculation is detailed in the electronic document of "RHSC DCN IHS Lothian Operational Energy Model – Financial Close".

3.7 Evaluating Energy Use for Small Power

The small power energy allocation has been based on estimated load densities and operational hours. Small Power includes power utilised by small medical equipment, office equipment, communal small power (e.g. printers, TVs as well as refrigerators and vending machines). The figures are detailed in the electronic document of "RHSC DCN IHS Lothian Operational Energy Model – Financial Close".

3.8 Evaluating Energy Use of Domestic Hot Water

We have used figures from CIBSE Guide G Public Health Engineering (CIBSE, 2004) Table 2.10, which includes daily hot water use for various types of buildings. We have taken an average figure of 155 L/person/day based on the different mix of hospital building wards. This figure has been selected based on engineering knowledge and experience of similar projects. We have applied this daily DHW figure to the number of beds in the proposed facility. We have also allowed for catering DHW, with the assumption that 3 meals will be provided per day.

We have developed the DHW variation profile based on engineering judgement of how we expect the facilityto operate. Peak DHW usage is expected to occur during the morning and evenings when showers are assumed to be the peak DHW demand. The calculation and the developed variation profile is detailed in the electronic document of "RHSC DCN IHS Lothian Operational Energy Model – Financial Close".

3.9 Evaluating Energy Use for Catering

The proposed catering facilities will be all electric and we have been working with the catering supplier to evaluate the electrical energy use of the equipment. The figures are detailed in the electronic document of “RHSC DCN IHS Lothian Operational Energy Model – Financial Close”.

3.10 Evaluating Energy Use for Freezer Rooms

There are two freezer rooms within the Facility, each with a 5m floor area. The units shall have proprietary cooling equipment. We have evaluated the energy use based on the estimated freezer load and efficiency. The electronic document of “RHSC DCN IHS Lothian Operational Energy Model – Financial Close” details the calculation method we have employed to evaluate the energy use.

3.11 Evaluating Energy Use for Lifts

Close dialogue with the proposed lift manufacture has been conducted in order to evaluate the energy use of the lifts. The electronic document of “RHSC DCN IHS Lothian Operational Energy Model – Financial Close” details the calculation method we have employed to evaluate the energy use.

3.12 Evaluating Energy Use for Server Rooms

Generic loads have been utilised for plant sizing and are the basis of evaluating the energy use for Server Rooms detailed in the electronic document of “RHSC DCN IHS Lothian Operational Energy Model – Financial Close”.

3.13 Evaluating Energy Use MRI, CT Scanners/X-rays

The units will be provided with proprietary cooling equipment. Generic loads have been utilised for plant sizing and are the basis of evaluating the energy use.

3.14 Evaluating Energy Use of Space Heating, Cooling, Fans and Pumps

The internal conditions for the model allow figures for the occupants, lighting, miscellaneous, auxiliary ventilation and infiltration rates for the facility. The thermal template applied to each zone will depend on the room activity. The Energy Model calculates the energy consumption for space heating, cooling, fans and pumps. The electronic document of ‘RHSC DCN IHS Lothian Operational Energy Model – Financial Close’ details the model inputs.

3.15 Estimating Management Factors

The facility will be well managed, with the systems being well maintained, controls calibrated, energy saving features being applied and the energy use is being monitored and managed. In practice, there might be possible variations in operation that may result in higher energy use. Hence, an overall management factor can be applied to the results to give a representation of the energy use of the facility based on its management during its operation.

The table below details three different management characteristics that are assumed:

Table 5: Management Factors

Excellent Management	Average Management	Poor Management
1.00	1.05	1.10

3.16 Results

RHSC, Little France Financial Close: excellent management (Management Factor=1)

Heated Volume (100/m^3)	1066
Operational Energy Prediction Summary	
From Dynamic Thermal Model Results	Total MWh
Boilers Heating (MWh)	562.15
Boilers DHW (MWh)	89.86
Chillers (MWh)	12.58
Fans & Pumps (MWh)	1381.19
Heat Rejection Fans & Pumps (MWh)	6.09
PV Generated Electricity (MWh)	-97.73
CHP Gas Usage (MWh)	4731.95
CHP Generated Electricity (MWh)	-1892.78
Lights Electricity (MWh)	1459.86
Equipment Electricity (MWh)	5888.77
From spreadsheet calculation	
Lifts (MWh)	859.06
Catering (MWh)	1314.00
Freezer (MWh)	9.86
External Lighting (MWh)	88.20
Total gas consumption (MWh)	5383.95
Overall grid electricity (MWh)	1120.47
Target Delivered Energy Usage (GJ/m3)	55
Operational Energy Prediction (GJ/m^3)	49

1- Predicted CO2 emission from proposed building

1.1	Calculated CO2 emission rate from notional building	89.8 KgCO2/m2.annum
1.2	Improvement factor	0.51
1.3	LZC benchmark	0.15
1.4	Target CO2 Emission Rate (TER)	45.9 KgCO2/m2.annum
1.5	Building CO2 Emission Rate (BER)	31.1 KgCO2/m2.annum
1.6	Are emissions from building less than or equal to the target?	BER =< TER YES

2- The performance of the building fabric and the building services systems

2.1 How do the U-values compare with Section 6 guidance?

The building follows guidance in Scottish Building Regulations 2010

Element	$U_{a\text{-}Limit}$	$U_{a\text{-}Calc}$	$U_{i\text{-}Limit}$	$U_{i\text{-}Calc}$	Surface where this maximum value occurs*
Wall	0.27	0.2	0.7	0.2	TEMP0018:Surf[4]
Floor	0.22	0.2	0.7	0.2	1___0000:Surf[0]
Roof	0.2	0.15	0.35	0.15	3CRR0002:Surf[0]
Windows**, roof windows, and rooflights	2	1.83	3.3	2	3TRM0000:Surf[0]
Personnel doors	2	-	3.3	-	No Personnel doors in building
Vehicle access & similar large doors	1.5	-	1.5	-	No Vehicle access doors in building

$U_{a\text{-}Limit}$ = Limiting area-weighted average U-values [W/(m2K)]
$U_{a\text{-}Calc}$ = Calculated area-weighted average U-values [W/(m2K)]
$U_{i\text{-}Limit}$ = Limiting individual element U-values [W/(m2K)]
$U_{i\text{-}Calc}$ = Calculated individual element U-values [W/(m2K)]

* There might be more than one surface exceeding the limiting standards.
** Display windows and similar glazing are not required to meet the standard given in this table.

2.2 Air permeability

Air Permeability	This building's value
m3/(h.m2) at 50 Pa	5

2.b Building services

The building services parameters listed below are expected to be checked by the BCO against guidance. No automatic checking is performed by the tool.

Whole building lighting automatic monitoring & targeting with alarms for out-of-range values	YES
Whole building electric power factor achieved by power factor correction	>0.95

1- 02_Radiant_Panels+Nat_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	-	0
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

2- 01_Radiant_Panels+Central_Mech_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	-	0
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

3- 03_Radiant_Panels+Zonal_Extract

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	-	0
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

4- 04_All_Air_System_Central_Mech_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	3.35	1.5
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

5- 05_Ceiling_Cassette+Central_Mech_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	3.35	1.5
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

"No HWS in project, or hot water is provided by HVAC system"

Technical Data Sheet (Actual vs. Notional Building)

Building Global Parameters

	Actual	Notional
Area [m²]	9677	9677
External area [m²]	10626.9	10626.9
Weather	GLA	GLA
Infiltration [m³/hm²@ 50Pa]	5	10
Average conductance [W/K]	3831.63	0
Average U-value [W/m²K]	0.36	0
Alpha value* [%]	8.18	10

* Percentage of the building's average heat transfer coefficient which is due to thermal bridging

Building Use

% Area	Building Type
	Retail/Financial and Professional services
	Restaurants and Cafes/Drinking Est./Takeaways
	Offices and Workshop businesses
	General Industrial and Special Industrial Groups
	Storage or Distribution
	Hotels
100	**Residential Inst.: Hospitals and Care Homes**
	Residential Inst.: Residential schools
	Residential Inst.: Universities and colleges
	Secure Residential Inst.
	Residential spaces
	Non-residential Inst.: Community/Day Centre
	Non-residential Inst.: Libraries, Museums, and Galleries
	Non-residential Inst.: Education
	Non-residential Inst.: Primary Health Care Building
	Non-residential Inst.: Crown and County Courts
	General Assembly and Leisure, Night Clubs and Theatres
	Others: Passenger terminals
	Others: Emergency services
	Others: Miscellaneous 24hr activities
	Others: Car Parks 24 hrs
	Others - Stand alone utility block

Energy Consumption by End Use [kWh/m²]

	Actual	Notional
Heating	76.51	150.54
Cooling	3.07	3.06
Auxiliary	26.05	34.94
Lighting	41.87	60.12
Hot water	81.74	45.71
Equipment*	80.71	81.63
TOTAL**	**162.99**	**294.37**

* Energy used by equipment does not count towards the total for calculating emissions.
** Total is net of any electrical energy displaced by CHP generators, if applicable.

Energy Production by Technology [kWh/m²]

	Actual	Notional
Photovoltaic systems	3.57	0
Wind turbines	0	0
CHP generators	66.25	0
Solar thermal systems	0	0

Energy & CO_2 Emissions Summary

	Actual	Indicative Target
Heating + cooling demand [MJ/m²]	151.08	224.07
Primary energy* [kWh/m²]	175.26	248.76
Total emissions [kg/m²]	31.1	45.9

* Primary energy is net of any electrical energy displaced by CHP generators, if applicable.

HVAC Systems Performance

System Type		Heat dem MJ/m2	Cool dem MJ/m2	Heat con kWh/m2	Cool con kWh/m2	Aux con kWh/m2	Heat SSEEF	Cool SSEER	Heat gen SEFF	Cool gen SEER

	Notional	0	0	0	0	0	0.83	0	----	----

Key to terms

Heat dem [MJ/m2]	= Heating energy demand
Cool dem [MJ/m2]	= Cooling energy demand
Heat con [kWh/m2]	= Heating energy consumption
Cool con [kWh/m2]	= Cooling energy consumption
Aux con [kWh/m2]	= Auxiliary energy consumption
Heat SSEFF	= Heating system seasonal efficiency
Cool SSEER	= Cooling system seasonal energy efficiency ratio
Heat gen SSEFF	= Heating generator seasonal efficiency
Cool gen SSEER	= Cooling generator seasonal energy efficiency ratio
ST	= System type
HS	= Heat source
HFT	= Heating fuel type
CFT	= Cooling fuel type

Apache Specification Information

Scottish Building Regulations 2010 Section 6 Guidance
Carbon Dioxide Emissions, U-Values, Air Permeability, and HVAC

Project name

Block_B_Section_6_sim000

Date: Mon Aug 25 16:00:39 2014

Administrative information

Building Details

Address: Address 1, City, Postcode

Certification tool

Calculation engine: Apache

Calculation engine version: 6.4.0.12

Interface to calculation engine: IES Virtual Environment

Interface to calculation engine version: 6.4.0.12

Compliance check version: v4.1.e.5

Owner Details

Name: Name

Telephone number: Phone

Address: Street Address, City, Postcode

Agent details

Name: Name

Telephone number: Phone

Address: Street Address, City, Postcode

1- Predicted CO2 emission from proposed building

1.1	Calculated CO2 emission rate from notional building	72.6 KgCO2/m2.annum
1.2	Improvement factor	0.52
1.3	LZC benchmark	0.15
1.4	Target CO2 Emission Rate (TER)	37.4 KgCO2/m2.annum
1.5	Building CO2 Emission Rate (BER)	27 KgCO2/m2.annum
1.6	Are emissions from building less than or equal to the target?	BER =< TER YES

2- The performance of the building fabric and the building services systems

2.1 How do the U-values compare with Section 6 guidance?

The building does not follow guidance in Scottish Building Regulations 2010

Element	$U_{a\text{-}Limit}$	$U_{a\text{-}Calc}$	$U_{i\text{-}Limit}$	$U_{i\text{-}Calc}$	Surface where this maximum value occurs*
Wall	0.27	0.2	0.7	0.2	BDRM0000:Surf[3]
Floor	0.22	0.2	0.7	0.2	BDRM0000:Surf[0]
Roof	0.2	0.15	0.35	0.15	FLTB0001:Surf[0]
Windows**, roof windows, and rooflights	2	1.6	3.3	1.6	BDRM0000:Surf[1]
Personnel doors	2	2.19	3.3	2.19	CRCL0309:Surf[1]
Vehicle access & similar large doors	1.5	-	1.5	-	No Vehicle access doors in building

$U_{a\text{-}Limit}$ = Limiting area-weighted average U-values [W/(m2K)]
$U_{a\text{-}Calc}$ = Calculated area-weighted average U-values [W/(m2K)]
$U_{i\text{-}Limit}$ = Limiting individual element U-values [W/(m2K)]
$U_{i\text{-}Calc}$ = Calculated individual element U-values [W/(m2K)]

* There might be more than one surface exceeding the limiting standards.
** Display windows and similar glazing are not required to meet the standard given in this table.

2.2 Air permeability

Air Permeability	This building's value
m3/(h.m2) at 50 Pa	5

2.b Building services

The building services parameters listed below are expected to be checked by the BCO against guidance. No automatic checking is performed by the tool.

Whole building lighting automatic monitoring & targeting with alarms for out-of-range values	YES
Whole building electric power factor achieved by power factor correction	>0.95

1- 01_Radiant_Panels+Central_Mech_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	-	0
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

2- 04_All_Air_System_Central_Mech_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	3.35	1.5
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

3- 03_Radiant_Panels+Zonal_Extract

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	-	0
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

4- 02_Radiant_Panels+Nat_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	-	0
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

5- 05_Ceiling_Cassette+Central_Mech_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**Specific fan power [W/(l/s)]**
0.97	3.35	1.5
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system		YES

"No HWS in project, or hot water is provided by HVAC system"

Technical Data Sheet (Actual vs. Notional Building)

Building Global Parameters

	Actual	Notional
Area [m²]	38712	38712
External area [m²]	37745.3	37745.3
Weather	GLA	GLA
Infiltration [m³/hm²@ 50Pa]	5	10
Average conductance [W/K]	9692.19	16031.6
Average U-value [W/m²K]	0.26	0.42
Alpha value* [%]	12.81	10

* Percentage of the building's average heat transfer coefficient which is due to thermal bridging

Building Use

% Area	Building Type
	Retail/Financial and Professional services
	Restaurants and Cafes/Drinking Est./Takeaways
	Offices and Workshop businesses
	General Industrial and Special Industrial Groups
	Storage or Distribution
	Hotels
100	**Residential Inst.: Hospitals and Care Homes**
	Residential Inst.: Residential schools
	Residential Inst.: Universities and colleges
	Secure Residential Inst.
	Residential spaces
	Non-residential Inst.: Community/Day Centre
	Non-residential Inst.: Libraries, Museums, and Galleries
	Non-residential Inst.: Education
	Non-residential Inst.: Primary Health Care Building
	Non-residential Inst.: Crown and County Courts
	General Assembly and Leisure, Night Clubs and Theatres
	Others: Passenger terminals
	Others: Emergency services
	Others: Miscellaneous 24hr activities
	Others: Car Parks 24 hrs
	Others - Stand alone utility block

Energy Consumption by End Use [kWh/m²]

	Actual	Notional
Heating	53.42	88.93
Cooling	5.85	6.81
Auxiliary	18.02	22.48
Lighting	35.19	52.04
Hot water	71.64	65.54
Equipment*	116.18	116.18
TOTAL**	**132.5**	**235.8**

* Energy used by equipment does not count towards the total for calculating emissions.
** Total is net of any electrical energy displaced by CHP generators, if applicable.

Energy Production by Technology [kWh/m²]

	Actual	Notional
Photovoltaic systems	1.79	0
Wind turbines	0	0
CHP generators	51.63	0
Solar thermal systems	0	0

Energy & CO_2 Emissions Summary

	Actual	Indicative Target
Heating + cooling demand [MJ/m²]	143.73	150.7
Primary energy* [kWh/m²]	149.27	203.5
Total emissions [kg/m²]	27	37.4

* Primary energy is net of any electrical energy displaced by CHP generators, if applicable.

HVAC Systems Performance

System Type		Heat dem MJ/m2	Cool dem MJ/m2	Heat con kWh/m2	Cool con kWh/m2	Aux con kWh/m2	Heat SSEEF	Cool SSEER	Heat gen SEFF	Cool gen SEER

Key to terms

Heat dem [MJ/m2]	= Heating energy demand
Cool dem [MJ/m2]	= Cooling energy demand
Heat con [kWh/m2]	= Heating energy consumption
Cool con [kWh/m2]	= Cooling energy consumption
Aux con [kWh/m2]	= Auxiliary energy consumption
Heat SSEFF	= Heating system seasonal efficiency
Cool SSEER	= Cooling system seasonal energy efficiency ratio
Heat gen SSEFF	= Heating generator seasonal efficiency
Cool gen SSEER	= Cooling generator seasonal energy efficiency ratio
ST	= System type
HS	= Heat source
HFT	= Heating fuel type
CFT	= Cooling fuel type

4.2 Scottish EPC

Energy Performance Certificate for buildings other than dwellings

Energy Performance Certificate

Building Energy Performance — Scotland

Calculated asset rating using Virtual Environment v6.4.0 [ApacheSim]	Building type Hospitals/Care Home	Current rating

Excellent

C+

Very Poor

Carbon Dioxide Emissions
The number refers to the calculated carbon dioxide emissions in terms of kg per m² of floor area per year: **31**

Approximate current energy use per m² of floor area: **163** kWh/m²

Main heating fuel: Natural Gas
Building Services: Heating with Mech. Vent.
Renewable energy source: CHP generators
Electricity: Grid supplied

Carbon Dioxide is a greenhouse gas which contributes to climate change.
Less Carbon Dioxide emissions from buildings helps the environment.

Benchmarks

A building of this type built to building regulations standards current at the date of issue of this certificate would have a rating:	46	D+
Where the accompanying recommendations for the cost effective improvement of energy performance are applied, this building would have a rating:	0	??

Recommendations for the cost-effective improvement (lower cost measures) of the energy performance

Address: Block_A_Scottish_EPC_sim000, City, Postcode
Conditioned area (m²): 9676.982
Name of protocol organisation: CIBSE Certification Ltd, [ABCD123456]
Date of issue of certificate: 25 Aug 2014 (Valid for a period not exceeding 10 years)

This certificate is a requirement of EU Directive 2002/91/EC on the energy performance of buildings.

NB THIS CERTIFICATE MUST BE AFFIXED TO THE BUILDING AND NOT REMOVED UNLESS REPLACED WITH AN UPDATED VERSION AND FOR PUBLIC BUILDINGS DISPLAYED IN A PROMINENT PLACE

A43133429

4.3 Edinburgh Standards for Sustainable Buildings S1 Form

Form S1

·EDINBVRGH·
THE CITY OF EDINBURGH COUNCIL

FOR OFFICIAL USE ONLY
Reference No :
Registration Date :

Sustainability Statement Form

To accompany all applications for planning permission apart from alterations and extensions to existing domestic properties.

PLEASE REFER TO NOTES FOR GUIDANCE

Part A – must be completed for all applications for new development (pages 1 & 2)
Part B – Major applications only

1 APPLICANT'S DETAILS

NAME INTEGRATED HEALTH SOLUTIONS LOTHIAN
ADDRESS RHSC & DCN PROJECT OFFICE
56 CANAAN LANE
POSTCODE EDINBURGH EH10 4SG

2 AGENT'S DETAILS

NAME IRONSIDE FARRAR LTD
ADDRESS 111 McDONALD ROAD
EDINBURGH
POSTCODE EH7 4NW

3 CONTACT DETAILS

NAME [redacted]
TELEPHONE [redacted] E-MAIL [redacted]

4 DESCRIPTION OF PROPOSED DEVELOPMENT *please specify what is being proposed*

RE-PROVISION OF THE ROYAL HOSPITAL FOR SICK CHILDREN AND DEPARTMENT OF CLINICAL NEUROSCIENCES AT LITTLE FRANCE

DECLARATION

I hereby certify that the information given by me in this form is true and accurate to the best of my knowledge.

Signature of ~~Applicant~~ / Agent (delete as appropriate) [redacted]

Date [redacted] 09 MAY 2014

1

A43133429

Edinburgh Standards for Sustainable Building S1 Form

Part A – Carbon Reduction Declaration (all new developments apart from domestic alterations and extensions and change of use for local developments)

Question	Response
Q1: Does the proposal include any Low and Zero Carbon Equipment to meet the requirements of Section 6 (energy) of the Building Standards 2010? Yes/No (if no, please explain)	Yes.
Q2: Has the proposed equipment been clearly marked on plans submitted with the planning application? Yes/No (if no, please explain)	Yes
Please describe the type of Low and Zero Carbon equipment that the application includes.	Solar photovoltaic's Gas Combined Heat and Power (CHP)

Part B – Sustainable Development (Major Developments only)

Section 1 - Energy needs have been minimised through a combination of design for energy efficiency and the incorporation of low or zero carbon equipment

Essential Requirements

Principle	Question	Response / Notes
Achieving carbon reduction	The proposed development must meet the requirements of Section 6 of the Building Standards.	Yes. Refer to Sustainability Statement.
Developing in sustainable locations.	The proposed development should be located on brownfield land, be allocated within the ECLP or be covered by an approved Masterplan, development brief or framework.	The development is on land designated for health use, part of the Edinburgh Bio-quarter and South East Wedge Parkland masterplan.

Desirable Requirements

Principle	Question	Response / Notes
Working towards net zero carbon emissions.	Developments that go beyond the 30% carbon reduction requirements within the Building Standards will be rewarded for doing so on a sliding scale.	The development is designed to achieve Section 7 (Scottish Building Standards) Aspect Silver 1 which is a minimum 21.4% improvement on the 2010 Building Standards.
Utilising low and zero carbon technologies.	Developments that include low and zero carbon technologies to meet or go beyond the carbon reduction requirements with the Building Standards will be rewarded.	The development includes solar photovoltaic's and gas Combined Heat and Power (CHP).

Achieving sustainability accreditation/ award.	Development scores very good or equivalent.	The development is designed to achieve a BREEAM New Construction 2011 'Very Good' rating.
Promoting passive design.	Has the design of the site been evaluated for passive gain? E.g. solar, layout, access.	The development has been assessed using best practice IES thermal modelling software.
Supporting decentralised and renewable energy for excess energy generation to be supplied to the national grid.	Has provision been made for excess energy generation to be supplied to the national grid? This can include making allowances for householders / occupants to install microgeneration technologies or connect to a CHP system.	The development has the potential to export excess electrical for the gas CHP plant to the national grid.
Support sustainable transport.	Does the development provide city car club spaces, bus stops, contribute to public transport or provide electric car hook ups.	The development supports green travel through a site specific travel plan (in accordance with BREEAM) and encourages the use of sustainable transport methods with the inclusion of adjacent bus stops, a site wide cycle path, and cycle parking provision.

Section 2 - Measures to promote water conservation

Essential Requirements

Principle	Question	IHS Lothian Response
Reduce water use.	100% of devices must be water saving, i.e dual flush toilets.	The development includes low flow water fixtures throughout in accordance with BREEAM credit Wat 1 (Water consumption) Level 2 appliances and fixtures.

Desirable Requirements

Principle	Question	IHS Lothian Response
Conserve and re-use water.	Rainwater harvesting for use on site.	Rainwater harvesting is not included within the scheme.

Section 3 - Measures that will ensure that there will be no increase in rate of surface water run-off in peak conditions

Essential Requirements

Principle	Question	IHS Lothian Response
Providing attenuation of surface water.	A SUDs system or a Surface Water Management Plan must be submitted.	Discharge off site is restricted to green-field rates. The SUDs system provides attenuation for up to the 1 in 200 year storm event plus climate change (assuming 100% impermeable site area). Additional storage is provided in dished areas on surface away from the building.

Desirable Requirements

Principle	Question	IHS Lothian Response
Supporting innovation in surface run off design.	Inclusion of green roofs or living walls.	Green roofs are proposed as part of the development over the CAMHS unit and within internal courtyard roofs. In addition strategically located rain gardens provide additional ecological and bio-diversity benefits as well as attenuation and treatment of surface run-off.

Section 4 – Provision of facilities to encourage recycling

Essential Requirements

Principle	Question	IHS Lothian Response
Reduce, reuse, recycle.	Include waste management plan or confirm commitment to recycling.	Dedicated space is provided for the segregation and storage of operational recyclable waste (both within basement area and service yard areas). The facility is located to allow ease of access by building users, and for ease of collection.

Desirable Requirements

Principle	Question	IHS Lothian Response
Provide facilities to compost Household waste.	Provide facilities to home compost household waste by means of separated dedicated storage space.	N/A
Neighbourhood recycling.	Provide one local communal recycling point per 100 properties in consultation with Waste Services.	N/A

Section 5 – Maximum use of materials from local and/or sustainable sources.

Essential Requirements

Principle	Question	IHS Lothian Response
Use of sustainable materials.	Materials selected must be sustainable and evidence provided. For example, all timber must be FSC labelled or certified alternative.	The key building materials have been selected with reference to the Green Guide to Specification, and A or A+ rated materials have been adopted where practical.
Reducing the use of uPVC	An alternative to uPVC must be used for all window.	No uPVC windows are being used.
Promoting recycled materials and reducing site waste.	At least 10% of materials come from a recycled source. This can include reuse of buildings on site for construction purposes.	It is intended that greater than 10% of materials will be from a recycled source.

Desirable Requirements

Principle	Question	IHS Lothian Response
Use of sustainable timber	No tropical hardwood used on site; and, or all timber is from a local source.	No tropical hardwood is being used. It is the intention that all timber is specified to be from an FSC (or equivalent) credited source.

4.5 BREEAM Ene01 Compliance Checker Calculator

bre BREEAM

BREEAM New Construction 2011 Ene01 Compliance Checker

Project ID: 140827043548:30677
BREEAM Assessment Reference Number:

BRUKL purpose: E&W

Energy & CO_2 Emissions Summary		
	Actual Performance	Indicative Target
Heating + Cooling demand [MJ/m²]	140.02	141.89
Primary Energy [kWh/m²]	160.34	185.68
Total CO_2 emissions [kgCO_2/m²]	26.2	35.5

BREEAM New Construction 2011: Ene01 results	
EPR-Energy Demand:	0.0177
EPR-Primary Energy:	0.3359
EPR-CO_2 Emissions:	0.1995
Overall Energy Performance Ratio (EPR_{tc}):	0.5531
Number of BREEAM Ene01 credits achieved:	9

Minimum Standards		
Target	Minimum Requirement - CO_2 emissions	Achieved?
1 or more credits	BER better than TER	Yes
BREEAM Excellent Rating	25% reduction in CO_2 emissions	Yes
BREEAM Outstanding Rating	40% reduction in CO_2 emissions	No
15 credits	100% reduction in CO_2 emissions	No

The generated Energy & CO_2 Emissions outputs should be entered in to the separate 2011 version of the BREEAM Assessors Ene01 calculator or the Pre-Assessment Estimator.

Note:
Please make a record of the ID number (140827043548:30677) and save or print a copy of this page and keep as part of the evidence file for the BREEAM assessment of this project.

Address: Street Address, City, Postcode

Criterion 1: The calculated CO_2 emission rate for the building should not exceed the target

1.1	CO_2 emission rate from the notional building, $kgCO_2/m^2.annum$	39
1.2	Target CO_2 emission rate (TER), $kgCO_2/m^2.annum$	39
1.3	Building CO_2 emission rate (BER), $kgCO_2/m^2.annum$	30.1
1.4	Are emissions from the building less than or equal to the target?	BER =< TER
1.5	Are as built details the same as used in the BER calculations?	Separate submission

Criterion 2: The performance of the building fabric and the building services should achieve reasonable overall standards of energy efficiency

2.a Building fabric

Element	$U_{a\text{-}Limit}$	$U_{a\text{-}Calc}$	$U_{i\text{-}Calc}$	Surface where the maximum value occurs*
Wall**	0.35	0.2	0.2	TEMP0018:Surf[4]
Floor	0.25	0.2	0.2	1___0000:Surf[0]
Roof	0.25	0.15	0.15	3CRR0002:Surf[0]
Windows***, roof windows, and rooflights	2.2	1.83	2	3TRM0000:Surf[0]
Personnel doors	2.2	-	-	No Personnel doors in building
Vehicle access & similar large doors	1.5	-	-	No Vehicle access doors in building
High usage entrance doors	3.5	-	-	No High usage entrance doors in building

$U_{a\text{-}Limit}$ = Limiting area-weighted average U-values [$W/(m^2K)$]
$U_{a\text{-}Calc}$ = Calculated area-weighted average U-values [$W/(m^2K)$]
$U_{i\text{-}Calc}$ = Calculated maximum individual element U-values [$W/(m^2K)$]

* There might be more than one surface where the maximum U-value occurs.
** Automatic U-value check by the tool does not apply to curtain walls whose limiting standard is similar to that for windows.
*** Display windows and similar glazing are excluded from the U-value check.
N.B.: Neither roof ventilators (inc. smoke vents) nor swimming pool basins are modelled or checked against the limiting standards by the tool.

Air Permeability	Worst acceptable standard	This building
$m^3/(h.m^2)$ at 50 Pa	10	5

2.b Building services

The building services parameters listed below are expected to be checked by the BCO against guidance. No automatic checking is performed by the tool.

Whole building lighting automatic monitoring & targeting with alarms for out-of-range values	YES
Whole building electric power factor achieved by power factor correction	>0.95

1- 02_Radiant_Panels+Nat_Vent

Heating seasonal efficiency	Cooling nominal efficiency	SFP [W/(l/s)]	HR seasonal efficiency
0.97	-	0	-
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

2- 01_Radiant_Panels+Central_Mech_Vent

Heating seasonal efficiency	Cooling nominal efficiency	SFP [W/(l/s)]	HR seasonal efficiency
0.97	-	0	0.6
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

3- 03_Radiant_Panels+Zonal_Extract

Heating seasonal efficiency	Cooling nominal efficiency	SFP [W/(l/s)]	HR seasonal efficiency
0.97	-	0	-
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

4- 04_All_Air_System_Central_Mech_Vent

Heating seasonal efficiency	Cooling nominal efficiency	SFP [W/(l/s)]	HR seasonal efficiency
0.97	3.35	1.5	0.6
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

5- 05_Ceiling_Cassette+Central_Mech_Vent

Heating seasonal efficiency	Cooling nominal efficiency	SFP [W/(l/s)]	HR seasonal efficiency
0.97	3.35	1.5	0.6
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

"No HWS in project, or hot water is provided by HVAC system"

Criterion 4: The performance of the building, as built, should be consistent with the BER

Separate submission

Criterion 5: The necessary provisions for enabling energy-efficient operation of the building should be in place

Separate submission

EPBD (Recast): Consideration of alternative energy systems

Were alternative energy systems considered and analysed as part of the design process?	NO
Is evidence of such assessment available as a separate submission?	NO
Are any such measures included in the proposed design?	NO

Technical Data Sheet (Actual vs. Notional Building)

Building Global Parameters

	Actual	Notional
Area [m²]	9677	9677
External area [m²]	10626.9	10626.9
Weather	EDI	EDI
Infiltration [m³/hm²@ 50Pa]	5	5
Average conductance [W/K]	3831.63	0
Average U-value [W/m²K]	0.36	0
Alpha value* [%]	8.18	10

* Percentage of the building's average heat transfer coefficient which is due to thermal bridging

Building Use

% Area	Building Type
	A1/A2 Retail/Financial and Professional services
	A3/A4/A5 Restaurants and Cafes/Drinking Est./Takeaways
	B1 Offices and Workshop businesses
	B2 to B7 General Industrial and Special Industrial Groups
	B8 Storage or Distribution
	C1 Hotels
100	**C2 Residential Inst.: Hospitals and Care Homes**
	C2 Residential Inst.: Residential schools
	C2 Residential Inst.: Universities and colleges
	C2A Secure Residential Inst.
	Residential spaces
	D1 Non-residential Inst.: Community/Day Centre
	D1 Non-residential Inst.: Libraries, Museums, and Galleries
	D1 Non-residential Inst.: Education
	D1 Non-residential Inst.: Primary Health Care Building
	D1 Non-residential Inst.: Crown and County Courts
	D2 General Assembly and Leisure, Night Clubs and Theatres
	Others: Passenger terminals
	Others: Emergency services
	Others: Miscellaneous 24hr activities
	Others: Car Parks 24 hrs
	Others - Stand alone utility block

Energy Consumption by End Use [kWh/m²]

	Actual	Notional
Heating	73.66	45.34
Cooling	3.04	1.04
Auxiliary	26.02	17.29
Lighting	39.77	30.7
Hot water	81.8	23.44
Equipment*	80.71	80.71
TOTAL**	**159.08**	**117.82**

* Energy used by equipment does not count towards the total for calculating emissions.
** Total is net of any electrical energy displaced by CHP generators, if applicable.

Energy Production by Technology [kWh/m²]

	Actual	Notional
Photovoltaic systems	3.37	0
Wind turbines	0	0
CHP generators	65.2	0
Solar thermal systems	0	0

Energy & CO_2 Emissions Summary

	Actual	Indicative Target
Heating + cooling demand [MJ/m²]	145.94	150.68
Primary energy* [kWh/m²]	169.14	213.35
Total emissions [kg/m²]	30.1	39

* Primary energy is net of any electrical energy displaced by CHP generators, if applicable.

HVAC Systems Performance

Key to terms

Heat dem [MJ/m2] = Heating energy demand
Cool dem [MJ/m2] = Cooling energy demand
Heat con [kWh/m2] = Heating energy consumption
Cool con [kWh/m2] = Cooling energy consumption
Aux con [kWh/m2] = Auxiliary energy consumption
Heat SSEFF = Heating system seasonal efficiency (for notional building, value depends on activity glazing class)
Cool SSEER = Cooling system seasonal energy efficiency ratio
Heat gen SSEFF = Heating generator seasonal efficiency
Cool gen SSEER = Cooling generator seasonal energy efficiency ratio
ST = System type
HS = Heat source
HFT = Heating fuel type
CFT = Cooling fuel type

Key Features

The BCO can give particular attention to items with specifications that are better than typically expected.

Building fabric

Element	$U_{i\text{-}Typ}$	$U_{i\text{-}Min}$	Surface where the minimum value occurs*
Wall	0.23	0.2	TEMP0018:Surf[4]
Floor	0.2	0.2	1___0000:Surf[0]
Roof	0.15	0.15	3CRR0002:Surf[0]
Windows, roof windows, and rooflights	1.5	1.6	TEMP0018:Surf[0]
Personnel doors	1.5	-	No Personnel doors in building
Vehicle access & similar large doors	1.5	-	No Vehicle access doors in building
High usage entrance doors	1.5	-	No High usage entrance doors in building

$U_{i\text{-}Typ}$ = Typical individual element U-values [W/(m²K)] $U_{i\text{-}Min}$ = Minimum individual element U-values [W/(m²K)]

* There might be more than one surface where the minimum U-value occurs.

Air Permeability	Typical value	This building
m³/(h.m²) at 50 Pa	5	5

BRUKL Output Document

HM Government

Compliance with England and Wales Building Regulations Part L 2010

Project name

Block_B_Part_L_sim000

Certification tool

Calculation engine: Apache

Calculation engine version: 6.4.0.12

Interface to calculation engine: IES Virtual Environment

Interface to calculation engine version: 6.4.0.12

BRUKL compliance check version: v4.1.e.5

Owner Details

Name: Name

Telephone number: Phone

Address: Street Address, City, Postcode

Certifier details

Name: Name

Telephone number: Phone

Address: Street Address, City, Postcode

Criterion 1: The calculated CO_2 emission rate for the building should not exceed the target

1.1	CO_2 emission rate from the notional building, $kgCO_2/m^2.annum$	35.5
1.2	Target CO_2 emission rate (TER), $kgCO_2/m^2.annum$	35.5
1.3	Building CO_2 emission rate (BER), $kgCO_2/m^2.annum$	26.2
1.4	Are emissions from the building less than or equal to the target?	BER =< TER
1.5	Are as built details the same as used in the BER calculations?	Separate submission

Criterion 2: The performance of the building fabric and the building services should achieve reasonable overall standards of energy efficiency

2.a Building fabric

Element	$U_{a\text{-}Limit}$	$U_{a\text{-}Calc}$	$U_{i\text{-}Calc}$	Surface where the maximum value occurs*
Wall**	0.35	0.2	0.2	BDRM0000:Surf[3]
Floor	0.25	0.2	0.2	BDRM0000:Surf[0]
Roof	0.25	0.15	0.15	FLTB0001:Surf[0]
Windows***, roof windows, and rooflights	2.2	1.6	1.6	BDRM0000:Surf[1]
Personnel doors	2.2	2.19	2.19	CRCL0309:Surf[1]
Vehicle access & similar large doors	1.5	-	-	No Vehicle access doors in building
High usage entrance doors	3.5	-	-	No High usage entrance doors in building

$U_{a\text{-}Limit}$ = Limiting area-weighted average U-values [$W/(m^2K)$]
$U_{a\text{-}Calc}$ = Calculated area-weighted average U-values [$W/(m^2K)$]
$U_{i\text{-}Calc}$ = Calculated maximum individual element U-values [$W/(m^2K)$]

* There might be more than one surface where the maximum U-value occurs.
** Automatic U-value check by the tool does not apply to curtain walls whose limiting standard is similar to that for windows.
*** Display windows and similar glazing are excluded from the U-value check.
N.B.: Neither roof ventilators (inc. smoke vents) nor swimming pool basins are modelled or checked against the limiting standards by the tool.

Air Permeability	Worst acceptable standard	This building
$m^3/(h.m^2)$ at 50 Pa	10	5

2.b Building services

The building services parameters listed below are expected to be checked by the BCO against guidance. No automatic checking is performed by the tool.

Whole building lighting automatic monitoring & targeting with alarms for out-of-range values	YES
Whole building electric power factor achieved by power factor correction	>0.95

1- 01_Radiant_Panels+Central_Mech_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**SFP [W/(l/s)]**	**HR seasonal efficiency**
0.97	-	0	0.6
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

2- 04_All_Air_System_Central_Mech_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**SFP [W/(l/s)]**	**HR seasonal efficiency**
0.97	3.35	1.5	0.6
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

3- 03_Radiant_Panels+Zonal_Extract

Heating seasonal efficiency	**Cooling nominal efficiency**	**SFP [W/(l/s)]**	**HR seasonal efficiency**
0.97	-	0	-
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

4- 02_Radiant_Panels+Nat_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**SFP [W/(l/s)]**	**HR seasonal efficiency**
0.97	-	0	-
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

5- 05_Ceiling_Cassette+Central_Mech_Vent

Heating seasonal efficiency	**Cooling nominal efficiency**	**SFP [W/(l/s)]**	**HR seasonal efficiency**
0.97	3.35	1.5	0.6
Automatic monitoring & targeting with alarms for out-of-range values for this HVAC system			YES

"No HWS in project, or hot water is provided by HVAC system"

Key to terms

Heat dem [MJ/m2] = Heating energy demand
Cool dem [MJ/m2] = Cooling energy demand
Heat con [kWh/m2] = Heating energy consumption
Cool con [kWh/m2] = Cooling energy consumption
Aux con [kWh/m2] = Auxiliary energy consumption
Heat SSEFF = Heating system seasonal efficiency (for notional building, value depends on activity glazing class)
Cool SSEER = Cooling system seasonal energy efficiency ratio
Heat gen SSEFF = Heating generator seasonal efficiency
Cool gen SSEER = Cooling generator seasonal energy efficiency ratio
ST = System type
HS = Heat source
HFT = Heating fuel type
CFT = Cooling fuel type

Key Features

The BCO can give particular attention to items with specifications that are better than typically expected.

Building fabric

Element	$U_{i\text{-}Typ}$	$U_{i\text{-}Min}$	Surface where the minimum value occurs*
Wall	0.23	0.2	BDRM0000:Surf[3]
Floor	0.2	0.2	BDRM0000:Surf[0]
Roof	0.15	0.15	FLTB0001:Surf[0]
Windows, roof windows, and rooflights	1.5	1.6	BDRM0000:Surf[1]
Personnel doors	1.5	2.19	CRCL0309:Surf[1]
Vehicle access & similar large doors	1.5	-	No Vehicle access doors in building
High usage entrance doors	1.5	-	No High usage entrance doors in building

$U_{i\text{-}Typ}$ = Typical individual element U-values [W/(m²K)] $U_{i\text{-}Min}$ = Minimum individual element U-values [W/(m²K)]

* There might be more than one surface where the minimum U-value occurs.

Air Permeability	Typical value	This building
m³/(h.m²) at 50 Pa	5	5

4.7 Future Actions

The following details the future action for the development of the Energy Model during the detail design and construction stage:

- Update the geometry
- Update design information
- Simulate for building regulation compliance, check BREEAM Ene01
- Simulate the operational energy model

4.8 CHP Utilisation Strategy

4.8.1 Introduction

This document describes the operational strategy for the new CHP unit installed as part of the overall energy producing plant at the new facility. The strategy being to arrange the plant integration into the Energy supplies of the building to achieve maximum possible usage and hence effectiveness of the CHP unit.

4.8.2 Current Plant Proposals

The CHP unit is designed to be the lead heat provider with boilerplant utilised as second stream provider where additional heat over CHP's max contribution is insufficient to meet the load or where the CHP is unavailable due to servicing etc.

The CHP plant has been selected to not only provide the necessary performance criteria to allow the design to meet Scottish Building Regulations Section 6 requirements. It has also been selected on the basis of ensuring optimum overall capacity and usage, the issue being that the currently available CHP units have a turndown aspect in terms of capacity output of 50%. The selection of this unit, which has a heat maximum capacity of 654kW and hence for the purpose of this study a turndown to 327kW reflects this sizing strategy.

To put this into perspective, the following demonstrates the relevant plant sizing compared to the CHP output.

1) Current operational boilerplant capacity 6400kW, 327kW CHP relates to 5.1% of capacity.
2) Current predicted maximum heating load for boilers 5600kW, 327kW CHP related to 5.8% of maximum estimated boiler load.

4.8.3 Current Heat Loads

The CHP heating output is taken direct to the main heating header and is thus available to contribute to all of the heating loads which are:-

- Heating circuits feeding room heat emitters
- Heating circuits serving air handling units
- Heating circuits serving domestic hot Water primary heating

4.8.4 Predicted System Loads

In order to review the estimated usage we have received the likely load patterns of the various components of the main heating loads, which are:-

1) Main Heating,

Maximum load (excluding air loading)1550kW at external design temp of -5.9°C. Thus with a room temperature of say average 21°C we should still have 327kW of heat input required until external temperature is 19°C and above.

2) Domestic Hot Water Load,

The hot water system capacity equals to a 1000kW input which a 327kW input constitutes 30% of the required load. However the Hot Water is user driven and as such we are suggesting that this load in real terms will only be available between by 0600 and 2000 hours.

3) Ventilation Load,

Given that we require to pre-heat the supply air being provided throughout the hospital, we have estimated that excluding Theatres the remaining air volume would increase by some 2.3°C if the entire 327kW was applied to the heating load alone. Given that the off coil temperature to the various systems should be around 20°C we have therefore reviewed the weather data for the period outside of the provided Hot Water demand cycle i.e. between 0600 and 2200 hours.

4) The pipework distribution system will have standing losses which would represent circa 5% over the whole system, this equates to 15kw of the 327Kw available.

We have then reviewed the number of hours when we could expect the external temperature to exceed 19°C. (See Appendix 1)

The results are:-

Hours exceeding 19°C	26 hours/ annum
Time period	May to August

Following discussions with a CHP manufacturer, it has been indicated that the CHP will require approximately 4.5 weeks duration of maintenance over the course of a year. With careful planning of the maintenance schedule the main servicing could occur during peak periods when external ambient is likely to exceed 19^{o}C. This strategy would then ensure that the CHP is continuously available when the ambient temperatures are below 19^{o}C.

4.8.5 Conclusion

From these studies we would conclude that the current system provides a robust and practical plant sizing strategy. A larger unit would in all probability given the 50% turndown ratio have a much lower usage factor. Likewise, a small unit wouldn't meet the Scottish Building Regulations Section 6 requirements and multiple smaller units could only offer a reduction on what is a very small annual percentage usage figure but with increased maintenance costs and potentially longer unavailability times due to regular ongoing maintenance issues.

In effect the system is utilising the air handling units as air cooled heat dumps but in an energy effective way as we are recycling this energy.

4.8.6 Buffer Vessel

Notwithstanding all of the above the system shall be configured to include two buffer vessels.

The buffer vessels shall comprise two thermal stores (2 x 15,000 litres) together with all controls, sensors and pumps to allow the vessels to operate in conjunction with the heating system and ensure that the CHP is the lead heat source and will limit the risk of CHP shutdown.

An emergency engine cooling unit shall also be provided in conjunction with the buffer vessels.

Dear John

Royal Hospital for Sick Children and Department of Clinical Neurosciences project (the "Project")

Appointment of Integrated Health Solutions Lothian ("IHSL") as preferred bidder ("Preferred Bidder Appointment")

On behalf of and as authorised by the Finance and Resources Committee of Lothian Health Board (the "**Board**") on 5th March 2014, I am pleased to advise you that:

(a) IHSL's Final Tender submitted on 13 January 2014, as clarified and/or amended by the clarification responses set out in Schedule Part 5 *(Clarifications in respect of IHSL's Final Tender)* of this Preferred Bidder Appointment, has been evaluated as the most economically advantageous Final Tender; and

(b) subject to IHSL and each member of its consortium accepting the conditions set out in this Preferred Bidder Appointment including the attached Schedules to this Preferred Bidder Appointment,

the Board has approved the recommendation to appoint IHSL as the Preferred Bidder for this Project on the basis of its Final Tender, the terms of which were set out in the Invitation to Submit Final Tender.

It shall be a condition of IHSL's Preferred Bidder Appointment that if:

(a) IHSL fails to:

(i) comply with the conditions of this Preferred Bidder Appointment, as set out in the Schedules to this Preferred Bidder Appointment; and

(ii) remedy such failures as described in paragraph (a)(i) above within a reasonable

period notified by the Board; and/or

(b) any of the executed certificates, including but not limited to Appendix B(iii) *(Due Diligence Certification),* Appendix H *(Certificate of Non Collusion and Non-Canvassing),* Appendix H *(Certificate of Acceptance of Contractual Terms*) of the Invitation to Submit Final Tenders, included in IHSL's Final Tender are materially incorrect or no longer valid,

the Board shall be entitled to terminate this Preferred Bidder Appointment and treat IHSL's Final Tender as having been withdrawn.

Execution of Preferred Bidder Appointment

By signing this Preferred Bidder Appointment IHSL and each member of its consortium acknowledge and agree that this Preferred Bidder Appointment does not, and is not intended to, create a contractual obligation on the Board to enter into the Final Tender (Bidder B) NPD Project Agreement or any other contractual arrangement.

Please confirm IHSL's and each member of IHSL's consortium acceptance of this Preferred Bidder Appointment by countersigning and returning a copy of this Preferred Bidder Appointment to me by email not later that 4.00pm on Friday 7 March 2014 and provide the original hard copy Preferred Bidder Appointment by post.

In accordance with the Invitation to Submit Final Tender, the Board reserves the right to abandon the procurement process, including Preferred Bidder discussions, at any time without awarding a contract to IHSL. In particular, the Board may require to do so in the event of a procurement challenge being raised by an unsuccessful bidder between issuance of its standstill letters under Regulation 32 of the Public Contracts (Scotland) Regulations 2012 and Financial Close.

Way Forward

Pending receipt of this signed Preferred Bidder Appointment, the Board looks forward to working with IHSL as Preferred Bidder, starting with an informal planning meeting with the City of Edinburgh Council at 2.00pm on Tuesday 11th March (venue to be confirmed).

The Board hopes that IHSL will be open to discussing the co-location of key individuals in the Project offices in the period up to Financial Close. The Board proposes to launch work with IHSL formally at a Project Team Meeting at 56 Canaan Lane on the morning of Thursday 13th March; please make immediate contact with Sorrel Cosens, on [redacted] to confirm arrangements for this.

The capitalised terms used within this Preferred Bidder Appointment shall have the same meaning ascribed to them in the Invitation to Submit Final Tender.

Yours sincerely

[redacted]

Brian Currie
Project Director

IN WITNESS WHEREOF these presents typewritten on this and the preceding 2 pages together with the Schedule in 5 Parts are executed on behalf of IHSL and its consortium members that they agree to the terms of this Preferred Bidder Appointment:

Schedules

Schedule Part 1

Terms of Preferred Bidder Appointment

1.	Description	General Issues
1.1	Programme	IHSL shall use its best endeavours to diligently progress the Project to Financial Close on 2nd October 2014 and thereafter use its best endeavours to achieve a Completion Date of 17th February 2017. IHSL shall further develop and agree the programme set out in Schedule Part 2 *(Preferred Bidder to Financial Close Programme)* of this Preferred Bidder Appointment as a key project management tool in collaboration with the Board. IHSL may amend such programme from time to time subject to the Board's approval, such approval not to be unreasonably withheld or delayed where amendments to such programme are required for reasons out with the control of IHSL or members of its consortium.
1.2	Amendments to Final Tender	IHSL shall not be permitted to make any amendments to its Final Tender except where provided for within this Preferred Bidder Appointment. IHSL acknowledges and accepts that the rules of Competitive Dialogue only permit fine tuning and clarification of IHSL's Final Tender at Preferred Bidder stage as opposed to material amendments which may have a commercial impact in relation to IHSL's Final Tender.
2.		**Legal/Contractual Issues**
2.1	Final Tender (Bidder B) NPD Project Agreement and Final Tender (Bidder B) Payment Mechanism.	IHSL shall work with the Board to develop, agree and finalise the outstanding issues set out in Schedule Part 3 *(IHSL outstanding issues to be addressed in respect of the Project)* of this Preferred Bidder Appointment and Schedule Part 4 *(IHSL's gaps list in relation to the Final Tender (Bidder B) NPD Project Agreement)* in respect of the Final Tender (Bidder B) NPD Project Agreement and Final Tender (Bidder B) Payment Mechanism.
2.2	Junior finance, shareholder and corporate documentation	IHSL shall use its best endeavours to diligently progress the junior finance documentation, shareholder documentation and other corporate documentation, including the NPD Articles of Association. IHSL shall provide the Board with drafts of such documentation for review in order to permit the Board to carry out the necessary due diligence in respect of such documentation in good time prior to Financial Close.
2.3	Sub-contract documentation	IHSL shall use its best endeavours to diligently progress the Contractor, Service Provider and Key-Sub-contractor sub-contract documentation based upon the final form Final Tender (Bidder B) NPD Project Agreement and heads of terms submitted as part of the Final Tender, together with any relevant interface agreement and professional team appointments. IHSL shall provide the Board with drafts of such documentation for review in order to permit the Board to carry out the necessary due diligence in respect of such documentation in good time prior to Financial Close.

2.4	Finance documentation	IHSL shall use its best endeavours to diligently progress the finance documentation with the appointed Funder post funding competition, together with all related Funder conditions precedent. IHSL shall work with the Board to produce or agree drafts of such documentation that will be acceptable to the Board and may be produced or agreed as part of the funding competition. IHSL shall permit the Board to carry out the necessary due diligence in respect of such documentation in good time prior to Financial Close.
2.5	Due diligence reports	IHSL shall use its best endeavours to diligently progress the final due diligence reports on behalf of the Funder's legal adviser, Funder's technical adviser and Funder's insurance adviser. IHSL shall keep the Board appraised of developments in respect of this documentation in order that any issues which may arise may potentially be addressed in good time prior to Financial Close in order that Financial Close is not delayed. Given the extensive Funder due diligence carried out by IHSL during the Dialogue Period, the Board is not expecting (nor is able to address) material amendments to the Final Tender (Bidder B) NPD Project Agreement at Preferred Bidder stage. IHSL shall provide the Board with drafts of such documentation for review in order to permit the Board to carry out the necessary due diligence in respect of such documentation in good time prior to Financial Close.
2.6	Legal opinions	IHSL shall use its best endeavours to diligently progress all relevant legal opinions which may be required as conditions precedent to the finance documents in good time prior to Financial Close. Where relevant, IHSL shall provide the Board with drafts of such documentation for review in order to permit the Board to carry out the necessary due diligence in respect of such documentation in good time prior to Financial Close.
2.7	Independent Tester	IHSL shall use its best endeavours to diligently progress the joint appointment of the Independent Tester, including inviting tenders from a long list of prospective Independent Testers (as agreed with the Board), evaluating all compliant tenders from such long list and preparing a relevant report to the Board. IHSL shall then liaise with the Board in respect of its report in order to jointly conclude the appointment of the Independent Tester. Following appointment of IHSL as Preferred Bidder, IHSL shall develop and agree with the Board a process for identification and appointment of an Independent Tester. The Board would expect IHSL to manage the agreed process, assuming the Board has appropriate approval rights with respect to the identity, cost and terms of the proposed Independent Tester appointee.
3.		**Interface Issues**
3.1	Interface Proposals	IHSL shall use its best endeavours to diligently develop the IHSL's Interface Proposals, these being both its Project Co Proposals and Method Statements addressing the requirements of Appendix A. The Interface Proposals shall be finalised in conjunction with the Board to ensure that both parties are satisfied that the Interface Proposals robustly address the requirements of Appendix A. This shall be a key

		part of the early stages of the Preferred Bidder period.
3.2	Assistance with Interface Proposals	IHSL shall liaise with the Board and provide all necessary assistance to the Board in progressing the Interface Proposals in order that these can be negotiated and agreed between both the Board and Consort prior to Financial Close.
3.3	Amendment to Interface Proposals	IHSL to amend its Interface Proposals where such amendments are requested by Consort pursuant to the Board's parallel negotiations with Consort in order that a final form of Interface Proposals can be agreed between both Consort and the Board.
3.4	Notices	IHSL to prepare and submit to the Board all necessary notices and or Project Co Proposals/Interface Proposals in accordance with the timescales set out in Appendix A prior to Financial Close in order that construction can commence as soon as possible after Financial Close.
4.		**Design and Construction Issues**
4.1	Schedule Part 3 *(IHSL's outstanding issues to be addressed in respect of the Project)*	IHSL shall use best endeavours to reach an agreed position with the Board with regard to the specific matters listed in Schedule Part 3 *(IHSL's outstanding issues to be addressed in respect of the Project)* of this Preferred Bidder Appointment and shall comply with any and all requirements of Schedule Part 3 *(IHSL's outstanding issues to be addressed in respect of the Project)* of this Preferred Bidder Appointment For the avoidance of doubt, the matters listed in Schedule Part 3 *(IHSL's outstanding issues to be addressed in respect of the Project)* of this Preferred Bidder Appointment do not represent a complete and exhaustive list of matters to be addressed prior to Financial Close and shall be actioned and completed at no cost to Board.
4.2	Petrol Station Ground Investigation	IHSL shall liaise with the Board and provide all necessary assistance to the Board in progressing Petrol Station ground investigations, particularly in relation to the scope of the ground investigation that will be designed and managed by the Board's environmental consultant, who will produce a "phase 1" and "phase 2" contaminated land risk assessment based on a proposed public open space land use.
4.3	Petrol Station Works	IHSL shall obtain necessary planning permission from The City of Edinburgh Council for the proposed temporary and permanent land uses at the Petrol Station Site e.g. potential construction traffic route during construction and final reinstatement as an area of public open space within the Board's Retained Estate. IHSL shall submit appropriate documentation to obtain such permissions including, but not limited to, risk assessments, a detailed remedial options appraisal and remediation statement which shall be produced in line with Part IIA of the Environmental Protection Act (1990) and follow best practice guidelines detailed in CLR11 (2004), BS10175:2011+A1:2013 and PAN 33. Remediation proposals shall be agreed with the Board and its environmental consultant prior to submission to The City of Edinburgh Council and if necessary, SEPA. This shall be a key part of the early stages of the Preferred Bidder period.

		Any remediation undertaken by Project Co during the Construction Phase shall be independently verified by the Board's environmental consultant and certified in accordance with the City of Edinburgh Council's planning requirements and regulations. IHSL shall use its best endeavours to diligently develop IHSL's remediation and landscaping proposals addressing the requirements of the Board's Construction Requirements. The remediation proposals and landscaping proposals shall be finalised in conjunction with the Board to ensure that both parties are satisfied that the remediation and landscaping proposals robustly address the Boards Construction Requirements. This shall be a key part of the early stages of the Preferred Bidder period. IHSL shall provide the Board with drafts of such documentation for review in order to permit the Board to carry out the necessary due diligence in respect of such documentation in good time prior to Financial Close.
4.4	Technical Schedules	IHSL shall use its best endeavours to diligently develop the following IHSL technical Schedules of the Final Tender (Bidder B) NPD Project Agreement: - Schedule Part 3 *(Key Works Personnel);* - Schedule Part 6 *(Construction Matters),* including Section 1 *(Planning / Consents)*, Section 4 *(Project Co Proposals),* Section 6 *(Room Data Sheets)*, Section 8 *(Quality Plans (Design & Construction);* and - Schedule Part 7 *(The Programme);* IHSL shall use its best endeavours to diligently input to the following Board technical Schedules of the Final Tender (Bidder B) NPD Project Agreement: - Schedule Part 10 *(Outline Commissioning Programme);* and - Schedule Part 11 *(Equipment).* These technical Schedules of the Final Tender (Bidder B) NPD Project Agreement shall be finalised in conjunction with the Board to ensure that both parties are satisfied that these technical Schedules robustly address the Board's Construction Requirements. This shall be a key part of the early stages of the Preferred Bidder period.
4.5	Design Development	IHSL shall further develop their Design included within their Final Tender, with the minimum level of design requirements being those set out in the Invitation to Submit Final Tender.
4.6	Board's Construction Requirements	The Board's Construction Requirements, as set out in Section 3 *(Board's Construction Requirements)* of Schedule Part 6 of the Final Tender (Bidder B) NPD Project Agreement, shall be based upon the version issued by the Board as part of the Invitation to Submit Final Tender.
5.		**FM Issues**
5.1	Schedule Part 3	IHSL shall use best endeavours to reach an agreed position with the

	(IHSL's outstanding issues to be addressed in respect of the Project)	Board with regard to the specific matters listed in Schedule Part 3 *(IHSL's outstanding issues to be addressed in respect of the Project)* of this Preferred Bidder Appointment and shall comply with any and all requirements of Schedule Part 3 *(IHSL's outstanding issues to be addressed in respect of the Project)* of this Preferred Bidder Appointment. For the avoidance of doubt, the matters listed in Schedule Part 3 *(IHSL's outstanding issues to be addressed in respect of the Project)* of this Preferred Bidder Appointment do not represent a complete and exhaustive list of matters to be addressed prior to Financial Close and shall be actioned and completed at no cost to Board.
5.2	Payment Mechanism and its calibration	IHSL shall commit to working with the Board to ensure that funders and their due diligence advisors fully understand and shall seek acceptance of the Payment Mechanism and its calibration.
5.3	Method Statements	IHSL shall use its best endeavours to diligently develop IHSL's Method Statements, as shall be set out in Section 2 *(Method Statements)* of Schedule Part 12 *(Service Requirements)* of the Final Tender (Bidder B) NPD Project Agreement, addressing the requirements of Schedule Part 3 *(IHSL's outstanding issues to be addressed in respect of the Project)* of this Preferred Bidder Appointment. The Method Statements shall be finalised in conjunction with the Board to ensure that both parties are satisfied that the Method Statements robustly address the requirements of Schedule Part 3 *(IHSL's outstanding issues to be addressed in respect of the Project)* of this Preferred Bidder Appointment and Section 1 *(Service Level Specification)* of Schedule Part 12 *(Service Requirements)* of the Final Tender (Bidder B) NPD Project Agreement. This shall be a key part of the early stages of the Preferred Bidder period. IHSL shall provide the Board with drafts of such documentation for review in order to permit the Board to carry out the necessary due diligence in respect of such documentation in good time prior to Financial Close. IHSL shall liaise with the Board and provide all necessary assistance to the Board in progressing the further development of Schedule 16 *(Change Protocol)* of the Final Tender (Bidder B) NPD Project Agreement) using the rates provided in the submission as a benchmark to produce a more detailed and Board specific costs/rates.
5.4	Energy Strategy	IHSL shall develop IHSL's Energy Strategy which shall contain as a minimum the information contained in the drafting note, in respect of the supply of Utilities to the Facilities and the operation of associated Plant, detailed in Section 1 *(Service Level Specification)* of Schedule Part 12 *(Service Requirements)* of the Final Tender (Bidder B) NPD Project Agreement. IHSL shall provide the Board with drafts of such documentation for review in order to permit the Board to carry out the necessary due diligence in respect of such documentation in good time prior to Financial Close
5.5	FM Schedules	IHSL shall use its best endeavours to diligently develop the following IHSL FM Schedules set out in the Final Tender (Bidder B) NPD Project

		Agreement: - Schedule Part 12 *(Service Requirements),* including Section 2 *(Method Statements),* Section 3 *(Service Quality Plan), [*Section 4 *(Energy Strategy)]* (which requires to be added to the Final Tender (Bidder B) NPD Project Agreement); and - Appendices to Schedule Part 16 *(Change Protocol).* These FM Schedules shall be finalised in conjunction with the Board to ensure that both parties are satisfied that the FM Schedules robustly address the Board's Construction Requirements. This shall be a key part of the early stages of the Preferred Bidder period.
5.6	Catering Strategy	IHSL shall liaise with the Board and provide all necessary assistance to the Board in the development of the implications of a revised Catering Strategy which includes the catering production for the whole of Lothian being provided internally by a reduced number of off–site production units within Lothian. The Project's main catering supply will be provided from an off-site production unit with the requirement for storage, regeneration and finishing kitchen(s) on site. There is no increase in footprint and limited impact on services, maintenance and lifecycle anticipated as result of this change.
5.7	Service Level Specification	The Service Level Specification, as set out in Section 1 *(Service Level Specification)* of Schedule Part 12 *(Service Requirements)* of the Final Tender (Bidder B) NPD Project Agreement, shall be based upon the version issued by the Board as part of the Invitation to Submit Final Tender.
6.		**Financial Issues**
6.1	Optimisation of the Financial Model	IHSL commits to working collaboratively with the Board and the Scottish Futures Trust to optimise the Financial Model in all relevant areas, including tax and accounting treatment, such that the junior debt coupon does not exceed 9.5% and that the nominal project IRR does not exceed 9.67%.
6.2	Amendment of Financial Model relating to financial security package	IHSL commits to amend the Financial Model in order that the costs of the agreed financial security package are separately identified as an input to the Financial Model.
6.3	Amendment of Financial Model relating to audit trail	IHSL agrees that any changes to the Financial Model will be subject to full tracking by IHSL with a clear description and cell reference to denote each item of change such that it may be reviewed by the Board and its financial advisors. The impact on the Annual Service Payment of each change should be provided, with a clear audit trail in place that demonstrates how such change has been implemented. Any change will be noted in an audit trail worksheet to be included in the Financial Model in as format to be agreed with the Boards' financial advisors.
7.		**Funding Competition Issues**
7.1	Methodology of funding	IHSL commits to undertaking and completing a Preferred Bidder funding competition in accordance with the proposed methodology set

	Competition	out in IHSL's Final Tender response. This commitment includes working collaboratively with the Board, its financial advisors and the Scottish Futures Trust in the selection of a senior debt funding package that is deliverable and which offers value for money to the public sector.
7.2	Update of Financial Model	IHSL undertakes to work with the Board to update the Financial Model as necessary to reflect the senior debt funding structure developed in the period to financial close.
7.3	Equity bridge loan and letter of credit	IHSL undertakes to work with the Board and Scottish Futures Trust during the funding competition process to evaluate the options of using an equity bridge loan and the use of a letter of credit to support junior debt so that the best value for money solution for the public sector can be adopted.
8.		**Planning Issues**
8.1	Planning applications	IHSL shall use its best endeavours to diligently progress any planning applications in respect of the Project as agreed with CEC. IHSL shall keep the Board fully engaged with all progress in respect of all relevant planning developments during the Preferred Bidder stage.
8.2	Reserved matters	IHSL to discharge all relevant reserved matters and planning conditions it shall be responsible for in good time prior to Financial Close.
8.3	Planning conditions	IHSL to discharge all relevant planning conditions it shall be responsible for, as set out in Schedule Part 29 *(Consents and Board Consents)* of the Final Tender (Bidder B) NPD Project Agreement, in good time prior to Financial Close.
9.		**Insurance Issues**
9.1	Insurance inception	IHSL shall use its best endeavours to diligently progress the inception of the insurance programme as required by Clause 53 *(Insurance)* and Sections 1 and 3 Schedule Part 15 *(Insurance Requirements)* of the Final Tender (Bidder B) NPD Project Agreement with its insurance broker. IHSL shall keep both the Board and its insurance adviser Willis appraised of progress in respect of all relevant insurance developments during the Preferred Bidder stage.
9.2	Waiver of subrogation	IHSL to provide assistance to the Board in respect of the Board exploring the waiver of subrogation insurance option and the insurance arrangements for the Facilities and the RIE Facilities as a whole.
10.		**Community Benefits Issues**
10.1	Community Benefits	IHSL shall use its best endeavours to diligently progress the Community Benefits provisions set out in Clause 73 *(Community Benefits)* of the Final Tender (Bidder B) NPD Project Agreement in line with IHSL's commitments set out within its Final Tender.

Schedule Part 2

Preferred Bidder to Financial Close Programme

Please refer to the separate paper apart which sets out IHSL's Preferred Bidder to Financial Close Programme.

Schedule Part 3

IHSL's outstanding issues to be addressed in respect of the Project

IHSL's outstanding issues to be addressed in respect of the Project		
1.	**Description**	**General Issues**
1.1		N/A
2.		**Legal/Contractual Issues**
2.1	Final Tender (Bidder B) NPD Project Agreement and final Tender (Bidder B) Payment Mechanism	Please refer to Schedule Part 4 *(IHSL's gaps list in relation to the Final Tender (Bidder B) NPD Project Agreement)* of this Preferred Bidder Appointment.
3.		**Interface Issues**
3.1	Interface Proposals	IHSL shall use its best endeavours to diligently develop the IHSL's Interface Proposals, these being both its Project Co Proposals and Method Statements addressing the requirements of Appendix A. The Interface Proposals shall be finalised in conjunction with the Board to ensure that both parties are satisfied that the Interface Proposals robustly address the requirements of Appendix A. This shall be a key part of the early stages of the Preferred Bidder period.
4.		**Strategic and Management Issues**
4.1	General	IHSL to work with the Board to progress, agree and finalise, as a Method Statement(s) the proposals contained in the Final Tender in respect of performance management and review, surveys and audits, reporting, workshops and meetings in order to capture the proposed strategic and management approach
4.2	B2	IHSL to develop with the Board the proposed set of specific measurable performance mechanisms and agree a review mechanism for these.
4.3	B3	IHSL to work with the Board to develop the proposals for data collection and provision, communication and mobilisation workshops, surveys and audits, and future performance review.
4.4	B4	IHSL to work with the Board to develop a proposed schedule of meetings and work streams. IHSL to provide further details of proposed KPIs for interface.
4.5	B7	IHSL to provide the Board with further detail in respect of the proposed asset tagging of Board direct supply equipment.
4.6	B8	IHSL to work with the Board to develop the proposals for a meeting and reporting structure, including monthly status reports and the proposed liaison committee.
4.7	B10	IHSL to develop with the Board proposals for project information packs, training and knowledge sharing.

4.8	B12	IHSL to provide the Board with the draft Health and Safety Management Plan for review. IHSL to agree with the Board the KPIs to measure the implementation of health and safety management.
5.		**Design and Construction Issues**
		The following list of design and construction issues shall be incorporated into IHSL's proposals/Project Co Proposals at Financial Close:
5.1	C1	IHSL to provide to the Board, within 8 weeks of the Preferred Bidder Appointment, further details of the enhanced screening to separate adults from children at the Emergency Department ambulance entrance. IHSL to review with the Board, within 8 weeks of the Preferred Bidder Appointment, the layout of the 4 bedded bay within the children's wards. IHSL to review with the Board, within 8 weeks of the Preferred Bidder Appointment, the design of the linen bays within clinical areas.
5.2	C2	IHSL to provide to the Board, within 8 weeks of the Preferred Bidder Appointment, further details on the economic impact of the heated areas in the gardens.
5.3	C3	The extent of the anti-ligature provision is in accordance with the Board's Construction Requirements, as clarified. The Board confirms that there will be no carpet in clinical areas. The Board wishes to review with the Bidder the location and form of the external staircase at the main entrance. IHSL to provide detailed landscaping proposals for the Petrol Station Site within 8 weeks of the Preferred Bidder Appointment.
5.4	C5	The Board wishes to discuss further the opportunities for expansion of the ground floor.
5.5	C6	IHSL shall provide assurance to the Board that the colours of the proposed signage will provide clarity for the visually impaired. IHSL shall provide assurance to the Board that where it is proposed to use graphics that all issues of copyright have been addressed.
5.6	C8	IHSL shall provide to the Board, within 8 weeks of the Preferred Bidder Appointment, further details on the domestic hot water generation and storage capacity based on the occupancies and usage requirements. IHSL shall provide to the Board, within 8 weeks of the Preferred Bidder Appointment, the finalised fire strategy including sprinkler coverage and categorisation. IHSL shall provide to the Board, within 8 weeks of Preferred Bidder Appointment, developed UPS Load assessments for consideration by the Board.

		IHSL to provide to the Board, within 8 weeks of Preferred Bidder Appointment, developed metering strategy for consideration by the Board. IHSL to provide to the Board, within 4 weeks of Preferred Bidder Appointment, typical installation details of the wiring / containment systems that have been proposed (in particular modular wiring / pre-wired trunking / supertube) for consideration by the Board.
5.7	C9	IHSL to consider, within 4 weeks of Preferred Bidder Appointment, maintenance and infection control issues with their significant use of LED light fittings. IHSL to provide to the Board, within 4 weeks of Preferred Bidder Appointment, confirmation that their lighting design will be in compliance with LG2 for lighting illumination levels and not going up to 10% below minimum stated values. At this time, IHSL also to confirm to the Board that this has no impact on their Energy Targets.
5.8	C10	IHSL to provide to the Board details of CHP optimisation strategy during Preferred Bidder stage with respect to controls, ranking, heat and electrical load matching, heat rejection, efficiencies and number of system start-ups. Proposals shall be provided to the Board for its review and acceptance prior to financial close. IHSL to provide to the Board details of motorised valves on water distribution to toilets during Preferred Bidder stage. IHSL to provide to the Board system description and schematic drawings for its review and acceptance, and confirm proposals comply with SHTM 04-01, with particular emphasis on water supplies to patient bedrooms, prior to Financial Close. IHSL to confirm to the Board prior to Financial Close that "good quality" CHPQA registration and certification will be obtained for the combined heat and power (CHP) installation. IHSL to confirm it will continue to develop a 'bespoke' energy model for the Facilities, in line with Appendix F *(Thermal and Energy Model Parameters)* of the Invitation to Submit Final Tender. IHSL also confirms that it shall work in collaboration with the Board to provide as accurate an estimated energy consumption figure, by fuel type, for the Board's annual Utilities cost forecasting. Prior to Financial Close, IHSL shall provide accurate estimates of water consumption and waste water outflows for IHSL's design solution, based on a Good Industry Practice calculation methodology, to inform the Board of annual water consumption costs for the Board's Utilities cost forecasting.
5.9	C12	The Board notes that there are a number of rooms which, whilst meeting the room areas in the Reference Design, do not meet those in the Draft Schedule of Accommodation. The Board would welcome efforts to adjust such rooms to achieve compliance with the Draft Schedule of Accommodation.
5.10	C17	IHSL s required to undertake extensive further development of storm and foul water, and SUDs systems including for the 1:1000 check for flooding. Surface drainage proposal for south east corner of the site are

		not fully developed. IHSL to further develop the car park detail with particular attention to boundary conditions. IHSL to develop and provide full detail and specification for gas membrane along with any protection required to protect buried pipework. At present IHSL allows for Radon Gas protection only.
5.11	C18	IHSL shall provide to the Board, within 8 weeks of the Preferred Bidder Appointment, the physical location, content and capacity of the new twin-gas governor arrangement. IHSL shall provide to the Board, within 8 weeks of the Preferred Bidder Appointment, further details on the dual water mains supplies. IHSL shall provide to the Board, within 8 weeks of the Preferred Bidder Appointment, the Board are keen to understand the potential to reduce energy consumption as the gas and electrical supply capacities are close to EUETS threshold. IHSL shall provide to the Board, within 8 weeks of the Preferred Bidder Appointment confirmation that his incoming HV Supply design will be in compliance with SHTM06-01 with particular reference to a 5-panel DNO HV switchboard. IHSL shall provide to the Board, within 4 weeks of the Preferred Bidder Appointment, details of the fire routing for consideration by the Board. IHSL shall provide to the Board, within 4 weeks of the Preferred Bidder Appointment details of the telecoms route from Old Dalkeith Road for consideration by the Board. IHSL shall provide to the Board, within 4 weeks of the Preferred Bidder Appointment, further details of the main supply substation and cable routes for consideration by the Board.
5.12	C19	IHSL shall work with the Board to develop and incorporate LZCT solutions and the potential use of grey water to maximise BREEAM credits to achieve the required rating of 'Excellent'.
5.13	C21	IHSL to confirm corridor widths that do not meet the NHS Requirements within 4 weeks of the Preferred Bidder Appointment.
5.14	C24	Location, use and restrictions for the temporary footpath from Car Park E to Old Dalkeith Road to the Site to be agreed within 8 weeks of the Preferred Bidder Appointment. IHSL's temporary site office storm drain connection proposed to connect into the county sewer if it is a combined drain. The county sewer is not a combined drain and IHSL will have to provide proposals for appropriate storm drain connection for its temporary site office within 8 weeks of the Preferred Bidder Appointment. IHSL to agree with the Board the environmental sensitive locations in the RIE Facilities within 8 weeks of the Preferred Bidder Appointment. .
5.15	C25	IHSL to conclude before Financial Close the commissioning programme and supporting methodology. IHSL's Commissioning Programme at Task 87 - Fire Alarm runs past the Completion Date.

		IHSL to conclude the Handover Clean Protocol prior to Financial Close. IHSL to agree with the Board, prior to Financial Close, the access for the Board during the Works including access for equipment installation (Groups 2A, 2B and 3) and the Board's Contractors.
5.16	C27	Confirmation required of 18001 accreditation of principle being used as an umbrella for all parties.
5.17	C28	IHSL to further develop proposals to comply with CDM regulations and in particular its obligation as "client" pursuant to such regulations. Sections 184/185 and 263 to be further developed at Preferred Bidder stage.
5.18	Acoustics	Within 4 weeks of the date of this Preferred Bidder Appointment, the Board requires that IHSL clarifies the construction methodology for dealing with impact sound transmission through floors. The Board requires confirmation that IHSL will take the necessary measures to meet the criteria for gaining BREEAM 2011 Credit Po105 as per the BCRs. Within 4 weeks of the date of this Preferred Bidder Appointment, the Board requires that IHSL clarifies the acoustic strategy for the Department of Audiology.
5.19	Helipad	The Board wishes to discuss with IHSL the configuration of the ramp with a view to reducing the distance between the bottom of the ramp and the "hot" lift core. The Board wishes to discuss with IHSL the implications of designing the helipad to take the heavier (15 Ton) Merlin aircraft rather than the (12 Ton) S92.
6.		**FM Issues**
		The following list of facilities management issues shall be incorporated into IHSL's proposals/Method Statements at Financial Close:
6.1	D1	IHSL's Method Statement shall reflect the additional detail required by the Board that all new staff shall be required to have received Occupational Health clearance prior to commencement on the Site.
6.2	D4	IHSL shall develop a Method Statement which shall set out its approach to Environmental Management, Quality Management and Health and Safety to reflect the integrated system proposed by IHSL. The content and scope of the system shall cover the full range of the Services.
6.3	D5	IHSL shall liaise with the Board to further develop its Escalation protocol for major incidents.
6.4	D6	IHSL shall work with the Board to discuss and agree any requirement for development of Departmental SLA's proposed by ISHL in relation to IHSL's approach to interfacing with the Board for undertaking works outside access times.
6.5	D8	IHSL shall liaise with the Board to develop Business Continuity Plans to

		reflect that the Board needs to be informed immediately of any Business Continuity incidents.
6.6	D10	IHSL shall review and agree with the Board its response to NHS alarms. IHSL shall review and agree with the Board its approach to Helipad lighting maintenance. IHSL shall reflect the information provided within the Reference Bulletin-00151/BULL RES-130 with regard to window and façade cleaning within their Method Statement.
6.7	D12	IHSL shall review and agree responsibilities for legislative compliance for energy and carbon. The Board is concerned that IHSL indicated within its proposal that the responsibility sits mainly with the Board.
6.8	D15	IHSL shall review and agree the process for security clearances for staff with the Board.
7.		**Financial Issues**
7.1		N/A
8.		**Funding Competition Issues**
8.1		N/A
9.		**Planning Issues**
9.1	General	IHSL shall use its best endeavours to diligently develop IHSL's planning issues, both design development including but not restricted to the following areas: - Impression of 'big brother' on approach from the south; - Quality and detailing of 'little brother'; - Hard and soft landscaping proposals across "Hospital Square" and in the immediate environs of the building creating visual complexity, for example, 'The Willows' requiring redesign and simplification; - Arrival experience and pedestrian legibility; and - The quality of internal and external spaces. The planning issues shall be finalised in conjunction with the Board, City of Edinburgh Council and Architecture and Design Scotland to ensure that all parties are satisfied that the Planning Proposals. This shall be a key part of the early stages of the Preferred Bidder period.
10.		**Insurance Issues**
10.1		N/A

Schedule Part 4

IHSL's gaps list in relation to the Final Tender (Bidder B) NPD Project Agreement

Please refer to the separate paper apart which sets out IHSL's gaps list in relation to its Final Tender (Bidder B) NPD Project Agreement.

Schedule Part 5

Clarifications in respect of IHSL's Final Tender

The following table sets out a list of the Clarifications, Bulletins and Bulletin Responses issued by the Board and/or IHSL via Conject during the period after the submission of IHSL's Final Tender. Please note that the Board has deemed that IHSL's Final Tender has been updated and/or amended in respect of all such Clarifications, Bulletins and Bulletin Responses as set out below:

Clarifications in respect of IHSL's Final Tender			
Item	**Description**	**Raised by**	**Reference**
1	Paediatric Bio Lab Costs	Bidder B	Bulletin-00153/BULL RES-134
2	Bidder B C30	Bidder B	Bulletin-00152/BULL RES-133
3	Paediatric Bio Lab Costs	Board	Bulletin-00153
4	Bidder B C30	Board	Bulletin-00152
5	Gas Consumption Clarification - C10	Bidder B	Bulletin-00150/BULL RES-132
6	Gas Consumption Clarification - C10	Bidder B	Bulletin-00150/BULL RES-131
7	Window Cleaning Strategy - Clarification.	Bidder B	Bulletin-00151/BULL RES-130

At Little France

CONFIDENTIAL

Meeting:	**Design Steering Group**	
Location:	Canaan Lane Edinburgh	
Date and time:	14 July 2014 – 1000hrs	
Subject:	Design Steering Group 04	
Meeting Chair:	Darren Smith	BMCE
Attendees:	David Stillie	MM
	Barry McCormack	RBG
	Graeme Greer	MM
	Maureen Brown	MM
	Lorraine Robertson	HLM
	Stewart McKechnie	WW
	Jackie Sansbury	NHSL
	Stuart Davidson	NHSL
	Liane Edwards-Scott	BMCE
	Janice Mackenzie	NHSL
Apologies:	John Ballantyne	BMCE
	Brian Currie	NHSL
	Panya Upama	BYES
	Richard Osbourne	MAC
Distribution:	Anne Alexander	BYES
(inc. Attendees)	Bob Nethery	BMCE
	Ken Hall	BMCE
	Jim Miller	IF
	Tom Littlewood	GINKO
	George Miller	BMCE
	Chris Martin	BMCE
	Graham Coupe	BMCE
	Corinna Neupert	RBG

1.0 Design Steering Group		**Action**	**Target Date**
1.1	Previous minutes agreed as accurate record of events, with the exception of minutes 7.1 + 7.2, challenged by MM. Wording to read: Minutes noted as 'ADJUSTMENT' see below.		
2.0 Town Planning			
2.0	Progressing as required in line with programme. Consultation complete. NHSL to feedback on proposed responses to representations	NHSL	20/06/2014
3.0 PCP Deliverables			
3.1	The meeting was held on PCP submissions on 17.06.14. Next drafts are all in progress, some have been submitted and are also being reviewed.	BMCE	17/06/2014
3.2	MAC still to advise the design team on key deliverables required and dates for funders. Matter Outstanding.	MAC	16/05/2014
3.3	NHSL noted that C-Sheets were missing from 4.24 Drawing Lists (HLM) Post Meeting Note: This was discussed at the RDS meeting and a schedule of rooms for which C sheets are to be provided will be submitted at that meeting	HLM	
3.4	MM requested an expanded RBG 4.24 section to include some of the construction information	RBG	
4.0 PB letter 05/03/14			
4.1	Tracking matrix discussed at meeting – update to be provided on Design issues. Update provided, GG ongoing review and comment for feedback into DSG/Design Team.	MM	06/06/2014
5.0 RDD			

5.1	Draft schedule and sign of sheet provided for comment. Thereafter to be populated by BMCE. Schedule submitted by BMCE – no comment received. GG noted he considered there was a difference with RDD submission and operational sign off. GG to review and advise for further discussion on the basis of Section 9. GG noted difference between RDD sign off and Operational sign off ref clause 12.5 GG noted he would review document stamps for sign off.. Post Meeting Note: Sign off stamp produced as sent to GG, now being incorportated on drawings	GG	16/05/2014
5.2	Process of submission to be reviewed and discussed - DS and GG to meet and discuss/agree. Meeting on Monday 21 July	DS/GG	27/06/2014
5.3	MM /BMCE to set review for RDS / environmental matrix. Matter Outstanding. Post meeting note: Meeting took place NHS ask if IHSL could incorporate additional infiormation onto the RDS. IHSL to consider. A further separate meeting to be arranged to resolve	MM/BMCE	27/06/2014
6.0 Energy Strategy			
6.1	All agreed nothing to report.Subject maintained for future reporting.		
7.0 UGM Progress			
7.1	Methodology for reporting progress using red,amber, green markups to floor plans discussed with sample tabled. Agreed acceptable way to monitor progress. 'Traffic Light' Plans showing progress to end of UGM R2 discussed. NHS Noted and agreed Ewn to be provided if pressure on programme. '**ADJUSTMENT**. MM asked for adjustment. BM agreed that post metting this was changed between BC/JB and EWN was not issued.- Instead the same detail was provided by e-mail'. Post Meeting Note: UGM rounds have now been completed and a report has been provided to the board.	BMCE/NHS	ongoing
7.2	BMCE (DS) noted that the confirmation of the accuracy of the previously issued progress drawings had not been receievd from DStillie. At the previous meeting MM agreed that they would indicate also how they considered progress was being made through round 2. NHSL (BC) noted that NHSL would not provide any reports, but rather input into the process of tracking. BMCE (DS) reiterated major concern that at the end of UGM R2, a number of red (rooms not reviewed) still exist. This could impact significantly on sign off at UGM R3 as required and that a number of UGM R4's have already been noted as required.'**ADJUSTMENT** MM noted that they would not be providing a report. BC agreed and indicate only comment was sought on the UGM progress reporting provided by HLM'. A regular update meeting was to be arranged by LE to review and agree the accracy of the UGM progrees montinoring. BMCE noted that the late changes being requetsed could not be accomodated and all changes need to be made at the UGM's, not after the meeting.. This was also having an adverse affect upon strategy workstreams. NHS / BMCE / MM agreed need to work through. NHS noted that with ecxpetion of Child life and Helath other depts should be closed at final UGM's	BMCE/NHS	23/05/2014
7.3	DS echod the request that all UGM and workstream correspondence should be issued via Aconex, and no correpsondence should be issued directly to consultants. All agreed this is now taking place and item can be closed.	CLOSED	
8.0 Derogation Schedule			
8.2	Schedule to be populated for regular review at the next DSG.	BMCE	14/07/2014
9.0 Table of finishes – Samples Schedule			
9.1	Schedule to be populated for regular review at the DSG initial submission ongoing		ongoing
10.0 Fire Safety			
10.1	*All agreed nothing to report.Subject maintained for future reporting.*		
11.0 Client Design Meetings Schedule			
11.1	BC to review Helipad internally, having noted concern about NHSL direction to BMCE. DS confirmed no anticipated change from Bayards submitted spec.	NHSL	
11.3	NHSL to confirm suitable dates for Helipad visit - took place on 30.06.14	CLOSED	20/06/2014
11.4	Access Control meeting 01 scheduled to take place on 19/06/2014. Meeting took place, no need for further reporting	CLOSED	16/05/2014
11.5	Secure by design. BC meeting with Police this week, and will feedback strategy for SBD review. IHSL(WW) to review comments and advise any BREEAM impact. Comments awaited from NHSL.	NHSL	20/06/2014
11.6	FM meeting took place and considerable change to 1:50s required, now taking place.	note	

12.0 Document Distribution and Meeting Attendance			
12.1	*All agreed nothing to report.Subject maintained for future reporting.*		
13.0 Change Control			
13.1	Regular Change Control meetings now taking place every Monday. No major items to report in this forum at present.	NHS	CLOSED
13.2	NHS asked the implication on plant for changes to the theatres. WW advised plant would need to change consequently NHS confirmed change would not be pursued. Change would be requested for windows to theatres on outside walls. NHS confirmed that windows still to be investigated. HLM to advise when they can issue options. This will be recorded in the change tracker.	HLM	20/06/2014
13.3	BMCE confirmed that Rfi reports will be ciruclated for discussion at future meetings.	Note	
14.0 Programme			
14.1	Final Factual report awaited from Raeburn. RBG to review.	RBG	20/06/2014
15.0 Consultants reports			
15.1	**HLM** Issues as noted above in planning and UGM		
15.2	**WW** 'Hot Topic' RFIs to be circulated by WW this week.	WW	20/06/2014
15.3	**RBG** RBG to provide confirmation that SER certification application has been submitted.	RBG	20/06/2014
15.4	MM requested revised Civil/Structures PCP submission for review.	RBG	20/06/2014
16.0 AOB			
17.0 Date of next meeting			
17.1	11 August 2014 at 1000hrs - Canaan Lane Offices		

RHSC & DCN

CONFIDENTIAL

Meeting: **Project Management Group Meeting**

Location: **Warlow**

Date and time: **3rd September 2014 @ 1100**

Subject: **Project Management**

Meeting Chair: **Wallace Weir**

Attendees:

Sorrel Cosens	NHSL	(SC)
Graeme Greer	NHSL	(GG)
Maureen Brown	NHSL	(MB)
Paul Serkis	IHSL	(BC)
John Ballantyne	IHSL	(JB)
Liane Edwards	IHSL	(LE)
Panya Upama	IHSL	(PU)
Sean Ferm	IHSL	(SF)
Wallace Weir	IHSL	(WW)

Apologies:

Matthieu Dannoot	IHSL	(MD)
Richard Osborne	IHSL	(RO)
Kamil Kolodziejczyk	NHSL	(KK)

Distribution (over and above attendees):

Brian Saunders	IHSL	(BS)

Number	Action	Owner	Date
1.0 Matters Arising			
1.1	1.3 - RDD Schedule being populated by IHSL. Target 05/09/14.	LE	05/09/14
1.2	1.4 - Schedule of derogations by IHSL, to be issued by 05/09/14.	LE	05/09/14
	1.4 - Schedule of derogations workshop organised for 12/09/14.	SC	-
1.3	1.6 - Board to provide delta view of updated corporate policies where possible. Under way to be completed by 05/09/14.	SC	05/09/14
1.4	1.7 - Title of Revision D/E of the BCRs partially resolved. GG to add footer identifying version and issue as a Transmittal to IHSL, including legal advisers.	GG	05/09/14
1.5	2.4 - WW to clarify Legals have been advised to include both the RDD and Table of Finishes in their gaps list.	WW	08/09/14
1.6	2.7 - Schedule Part 13 (Independent tester) to be clarified at meeting on 04/09/14.	SF	04/09/14
1.7	2.8 – Environmental Matrix issue discussed at DSG on Monday 01/09/14. Feedback from IHSL by 05/09/14.	LE	05/09/14
1.8	2.9 – Finalisation of PayMech Gross Service Units relies on issue of SoA. SoA due by 05/09/14.	LE	05/09/14
1.9	2.10 - FM – Schedules Part 12 and Part 16 – complete and submitted. Detail not yet received or reviewed by the Board. Board to confirm	SC	05/09/14

	receipt.		
2.0 Technical Schedule Tracker			
2.1	TS and PCP trackers reviewed line by line with status and commentary to be updated by IHSL.	LE / PS	05/09/14
2.2	Key works Personnel table to be updated. FM lead not required, SPV / Project Co lead representative not required.	SF	04/09/14
2.3	As planning consent has been granted Schedule Part 6, Section 1, Planning / Consents will be closed and Planning Conditions will now be tracked under Part 29. Tracker to be updated.	PS	04/09/14
2.4	BCRs sub sections D and E updates to be provided by Board by 23/09/14.	SC	23/09/14
2.5	RDS schedule on the basis of generic and specialist rooms to be proposed by IHSL for agreement by Board.	LE	10/09/14
2.6	Operation functionality caveat and related stamp to be confirmed by the Board.	GG	05/09/14
2.7	Equipment schedule to be issued by IHSL.	LE	03/09/14
2.8	Remaining Individual meetings to review PCPs to be scheduled.	SC/LE	05/09/14
2.9	Schedule of derogations to be submitted by IHSL, target 05/09/14.	LE	05/09/14
2.10	PCP 4.4 Architectural and Landscaping has a review meeting arranged for 09/09/14. Board comments in respect to this PCP to be reviewed by both the Board and IHSL prior to this meeting, as these seem to include inappropriate feedback.	SC / PS	09/09/14
3.0 Work Streams			
3.1	No comments.		
4.0 Requests for Information			
4.1	Open RFIs reviewed line by line. All parties to close open RFIs that have been addressed /superseded by subsequent work.	MB / LE	10/09/14
5.0 Programme			
5.1	Programme reference 8J to be updated to relate to construction.	PS	04/09/14
6.0 Preparation for PDG Meeting			
6.1	To be addressed at next meeting pending PDG on 12/09/14.	-	-
7.0 Schedule 31, Interface			
7.1	All 8 appendices have been submitted. Awaiting feedback from Consort at meeting arranged for 05/09/14.	-	-
8.0 FC Document Collation			
8.1	IHSL to confirm proposal / process for the collation of documents for FC. Update at next meeting	WW	10/09/14
9.0 AOB			
9.1	None

Action Tracker

Issue Date **24.09.14**
Issued By **L E Scott**

ITEM	ACTION	DATE RAISED	CURRENT ACTIVITY	ACTION WITH	DATE CLOSED
01	Town Planning - current conditions schedule up to date and circulated on Aconex. Board to be issued formally.	02/09/2014	Final wording being agreed for all conditions, issue to Board imminent.	IHSL/BMCE	
02	OF/FC/RDD - stamps wording to be agreed for return of all drawings	16/05/2014	Stamp wordings agreed, stamps delivery awaited.	CLOSED	19/09/2014
03	OF/FC/RDD - drawing lists to be progressed and issued.	02/09/2014	All in progress, all issued in draft to NHSL except RDD, due w/e 26/09/14.	IHSL/BMCE	
04	Environmental Data Matrix - issues with room type allocations noted.	02/09/2014	IHSL reviewed, revised PCP 4.9 reviewed.	CLOSED	19/09/2014
05	RDS - content and numbers still to be agreed. IHSL confirmed an RDS will apply to each room and will be provided during RDD as agreed.	27/06/2014	Content agreed, list issued, RDS issued for review.	CLOSED	19/09/2014
06	Board reviewed all 1:50 loaded plans and noted 23 departments with no comments, 33 depts with minor and major comments.4 depts not yet reviewed. Board/IHSL to review comments.	02/09/2014	Meeting took place 08/09/14 to discuss all comments. None required drawing updates as none were affecting Operational Funcitionality.	CLOSED	08/09/2014
07	Samples Schedule - requires to be populated further.	02/09/2014	To be populated further when sub cts appointed.	IHSL/BMCE	
08	Derogations Schedule - meeting planned 12.09.14 to review first drafts.	02/09/2014	Meeting took place ; comments received, BMCE have issued via aconex for next level of review by Board.	NHSL	
09	Secure by Design - progress required.	02/09/2014	IHSL are reviewing current situation, contact received from B Currie	IHSL/BMCE	
10	RFI reports to be reviewed in PMG meeting.	02/09/2014	Reports now reviewed weekly.	CLOSED	02/09/2014
11	Theatre windows to be issued to Board for consideration.	02/09/2014	Issued, and instruction received from NHSL	CLOSED	19/09/2014
12	DCN Courtyards - design options to be issued to the Board for consideration.	02/09/2014	Issued, instruction awaited from the Board.	NHSL	
	SPECIFIC DESIGN MATTERS				
13	**Anti Ligature** - IHSL to ensure mental health room in A1 has plasterboard ceiling.	02/09/2014	Drawing is already submitted to Board, comment to be made on drawing.	NHSL	
14	**Anti Ligature** - Board to consider reduction in scope of anti- lig windows to whole hospital.	24/09/2014	IHSL to make proposal for consideration.	IHSL	
15	**Communication spaces / street widths** - derogation sought for street width reduction at resting places. Reviewed in meeting 24/09/14	02/09/2014	Board to review interior finishes drawings submitted and markup for further discussion with IHSL	NHSL	
16	**Downstand beams / service runs** - NHSL to return comments on the downstand beams.	02/09/2014	All reviewed, NHSL accepted the proposal. Derogation to be signed off.	CLOSED	24/09/2014
17	**CHP optimisation -** NHSL to return comments on paper issued under PCP 4.10.	02/09/2014	Board to issue final comments on PCP	NHSL	
18	**Lifts** - NHSL to return comments - revised PCP issued. Possible issues surrounding FM lift sizes. Discussed at length in meeting.	02/09/2014	Comments received by Board. IHSL to confirm compliance in writing. NHSL to consider instruction required as necessary.	IHSL NHSL	
19	**Acoustics** - issue to be resolved regarding reverberation time to the atrium. Discussion ended at 2.0 seconds at 1:1 communication spaces, and maximum upper limit of 2.75 seconds. Target 2.5 seconds.	02/09/2014	ACL to redraft minor comments throughout and resubmit PCP. NHSL to consider RT's again and escalate to Project Delivery Group if necessary.	IHSL/ACL NSHL

Environmental Matrix - Guidance Notes

1 This workbook is prepared for the Reference Design Stage as an easier reference tool to replace ADB RDS M&E Sheets for the Environmental Criteria elements as described on these sheets.

2 The services matrices are produced from the NHS Lothian Schedule of Accommodation Sheets Version 13 issued 19th September 2012.

3 The design of the HVAC systems to the theatres shall be in accordance with SHTM 03-01.

4 Where radiant panels are indicated in any room in these matrices, detailed design development may remove the need for these without detriment to environmental temperature. This design development is dependant on actual room layout - i.e. whether a room is located adjacent to an external wall, ground bearing floor, roof surface or is internal.

5 Ventilation air change rates and the use of natural ventilation in Patient Areas shall be reviewed throughout the detail design process to ensure a maximum internal temperature of 25°C (dry bulb) is not exceeded during normal occupancy. This criteria shall also apply to cellular and open plan office spaces.

6 Maximum internal temperatures listed relate to normal occupancy and Summer Design Conditions ; External Summer Conditions for Cooling Plant Selection as per SHTM2025,Enthalpy 54kJ/kgda.26degC db,19degC wb. External Winter Conditions as per CIBSE Guide A Table A 2.2 for locality = - 6C for Heat Losses, and as SHTM 2025 for locality = -10C for AHU Ventilation Plant design.

7 Examination lamp notes where listed are provisional. Detailed requirements (fixed, mobile, illumination) will be detailed on C sheets as agreed from signed off 1:50 RDS, which shall take precedence over this schedule.

8 All lighting levels are derived from CIBSE Lighting Guide LG2. Client briefing may take precedence over Environmental Matrix.

9 Colour rendering refers to CIBSE Lighting Design Guide and will be applied throughout

"80" : Normal
"90" - Enhanced to provide close as possible match to natural light for clinical purposes

10 Thermostatic Mixing Devices - SHTM 04-01 Guidance shall be employed for specific TRV Type versus listed Area/Activity.

11 Standby Lighting to be Grade A throughout .

12 The internal temperature in naturally or mechanically ventilated rooms shall not exceed the maximum temperature as listed on these Environmental Matrices provided external summer design criteria is not exceeded .

13 Local Radiant Panel TRV's shall be tamper proof head type with limiting/locking facility.

14 Local Control BMS Temperature Sensors for ducted reheat zones and chilled water cassettes for hotspots shall be provided with local range adjustment to +/- 2C of BMS Set Point. BMS set point shall be adjustable via operator/user dialogue through formal

15 **Typical bedroom** - Design Criteria - SHTM 03-01 Clause 2.11 - internal temperatures in patient areas should not exceed 28C db for more than 50 hrs per year. Appendix 1 SHTM 03-01 gives 18C to 28C float range. NHSL however require that the maximum internal design temperature is 25C

HDU bed areas - Design Criteria - HBN 57 gives specific guidance as well as SHTM 03-01 - esp Appendix 1 for air change rates - 10ac/hr Supply, 18C to 25C control range. (Capability shall be provided but not at the summer and winter external ambient design extremes against the internal maximum and minimum range conditions).

The department should be air conditioned and controlled on a zonal basis.

Central AHU plant requires humidification to achieve RH range during winter (HBN 57 Clause 4.60).

Post theatre recovery areas - Design Criteria - SHTM 03-01 - esp Appendix 1 for air change rates - 15ac/hr S&E , 18C to 25C control range.(Capability shall be provided but not at the summer and winter external ambient design extremes against the maximum and minimum range conditions).

Central AHU plant requires humidification to achieve RH range during winter.

Critical Care areas - Design Criteria - SHTM 03-01 - esp Appendix 1 for air change rates - 10ac/hr Supply , 18C to 25C control range.(Capability shall be provided but not at the summer and winter external ambient design extremes against the maximum and minimum range conditions). NHSL may require specific rooms to have a control range up to 28C

Central Air Handling Plant requires humidification to achieve RH range during winter (HBN 57 Clause 4.60).

Theatre areas - Design Criteria -SHTM 03-01 - esp Appendix 1 and 2 for air change rates Appendix 3 for design logic and pressure cascade criteria, 18C to 25C control range.(Capability shall be provided but not at the summer and winter external ambient design extremes against the internal maximum and minimum range conditions). SHTM 03-01 advises Humidification is no longer to be provided for theatres ventilation as a matter of course. Users to verify any specific requirements depending on clinical requirement. Space in plant rooms should be provided together with blank section within air handling units for future provision. NHSL may require specific rooms to have a control range up to 28C

16 **Corridor** ventilation may be either mechanical or where the opportunity exists natural. To be determined during detailed design with due regard to clinical functionality.

17 **Single Room WC** - SHTM 03-01 Appendix 1 suggests 3ac/hr extract air change rate only. HK have applied 10ac/hr extract rate to provide a more robust rate of extract.

18 **Diagnostic Rooms** - (X Ray, CT Scanner, MRI Scanners, Gamma Camera) - air change rates listed at 8ac/hr. Actual air change rate must be derived through room heat gain analysis and actual equipment guidance.

19 **Operating Theatre Laminar Flow/UCV Requirements -** Refer to Operational Policy Documents for specific theatres which require Laminar Flow/UCV canopy style ventilation solution. Note specific requirements for screenless canopies to avoid conflict with particular surgeon instruments/microscopes.

20 **Small workshop Areas -** Local Extract Ventilation (LEV) unit requirement to be determined from room equipment schedules

21 **Note that Isolation Suite ventilation solutions for this project shall follow HBN 4 Supplement 1 Section 4 Item 4.8 Guidance i.e.**
A common departmental AHU shall be employed to provide supply air ventilation (and shall therefore employ duty & standby motors)
Isolation Rooms En Suite Extracts shall be provided with an independent Isolation Room toilet extract ventilation system.
Isolation Rooms En Suite Extracts shall be provided with either externally located 3 mtr high discharge stack in a safe location or with extract filters (H14) within a safe change housing outside the building on the suction side of the fan.
Heating & Cooling Isolation Suites shall be provided via the ventilation system.

22 **Retail Provision -** Service provisions listed are Infrastructure only for future fit-out by retailer

23 **Comfort Cooled Fresh Air -** Where noted as such on the matrices, this means as provided via departmental air handling plant via chilled water cooling coils.

Room Function Reference Sheet.

The following table details reference templates which are used to populate cells within the environmental matrix. Refer to individual department sheets for individual room environmental conditions

Environmental Matrix Comments - 13 October 14

The Board has the following initial technical comments on the draft 1 of the Environmental Matrix;

1. The submitted Environmental Matrix does not reflect the current Schedule of Accommodation, e.g. theatres and DCN acute care changes are not included. IHSL to provide up to date Environmental Matrix.

2. Issues within the guidance notes relating to:
    a. Environmental Matrix still dated as version 13 issued 19th September 2012,
    b. Humidification, the requirement is for the space for future installation,
    c. HK Design reference to be removed.

3. The detail contained in the Clinical Output Specification requires theatre temperatures to be able to be raised to 31°C for certain operations. IHSL to reflect this in the Environmental Matrix.

4. Body view rooms to be able to reduce temperature for body storage. IHSL to reflect this in the Environmental Matrix.

5. Room descriptions are given but no room numbers shown – IHSL to add room numbers.

6. SHTM 03-01 clause 2.11 states;

    "Internal temperatures in patient areas should not exceed 28°C db for more than 50 hrs per year", however the Board added an additional BCR clause regarding the 25°C as clarified below:

    *"*Measures shall be assessed, modelled and implemented to demonstrate that the internal air temperature of any room or area does not exceed the maximum acceptable level of 25°C for more than 50 hours per annum".

    Further review and development of the Environmental Matrix is required to clarify the following;
    a. There are some rooms at 28°C which are provided with comfort cooling.
    b. There are areas / rooms in the Environmental Matrix that contradict the above BCR clause, hence once IHSL produce an updated Environmental Matrix, further discussion is required with the Board to confirm which rooms or areas are not going to meet the Clause.

7. Bedrooms 4ac/hr, SHTM says 6 ac/hr
    Bedrooms have no extract
    Bedroom en-suites 10 ac/hr, SHTM says 3 ac/hr
    Bedrooms stated as positive pressure, SHTM says 0 or –ve pressure
    The supply air to a bedroom has to be balanced with extract
    e.g. Bedroom area 19m2 and 2.4m high = volume 45.6m3 x 6ac/hr =273.6 m3 / hr
    En-suite area 5 m2 and 2.4m high = volume 12.0m3 x 3ac/hr = 36 m3 / hr
    To achieve balanced pressure within room bedroom extract required = 273.6 – 36 = 237.6 m3 / hr

8. Recovery stated as 4 ac/hr, SHTM says supply and extract 15 ac/hr

9. Query DSR at 10 ac/hr, this seems high for a predominantly empty room – IHSL to confirm if this correct?
10. Query disposal hold extract 10 ac/hr, this seems high – IHSL to confirm if this correct?

11. Public telephone booth area of $2m^2$ fitted with a radiant panel – IHSL to confirm if this correct?

12. Colour rendering all stated as 80 where certain areas should be 90.

Number	Action	Owner	Date
1.0 Matters Arising			
1.1	1.2 Meeting schedule requirements post FC to be defined by Board.	SC/GG/LE	14/11/14
2.0 Technical Schedule Tracker			
2.1	The TST was reviewed line by line with status and commentary to be updated by IHSL. The PCP Tracker was reviewed and noted as subject to continuous update.	PS / LE Note	11/11/14 -
2.2	PCP 4.16 Commissioning, IHSL to confirm Notice Periods are consistent with PA.	PS	07/11/14
2.3	PCP 4.32 Schedule of Derogations, Board to confirm circa 6 comments in respect to derogations. Detail to be advised to IHSL by 6th November 2014 with a view to agreement on 7th November 2014.	GG	07/11/14
2.4	PCPs in general, outstanding non material comments to be added to RDD as schedule part 4. Iterations of PCPs will be frozen as submitted to the LTA. Additional comments will form part of RDD schedule part 4 and will be available in this format by 10th November 2014.	GG	10/11/14
2.5	Balance of drawings returned from the Board are being validated and will subsequently be uploaded to Aconex FC site.	LE	Target 07/11/14

2.6	Schedule Part 6, Section 5, RDD, dates and periods to be synchronised between RDD schedule, PA, FC Programme, Construction Programme etc. First three months of proposed RDD meetings to be scheduled and subsequently rolled out. The Board has commented and suggested amendments to the RDD Schedule structure. IHSL to respond. If amendments are accepted populate RDD Schedule framework.	PS / SF PS LE	10/11/14 12/11/14 11/11/14
2.7	Schedule Part 6, Section 9, Operational Functionality, service yard accommodation and corridor drawings to be incorporated into operational functionality drawings register.	LE	10/11/14
2.8	Schedule Part 10, Outline Commissioning Programme to be provided to SF by PS.	PS	07/11/14
2.9	Schedule Part 11, Appendix 2, Equipment Responsibility Matrix (ERM) is not required by the PA. ERM will be developed as an operational tool in due course.	Note	-
2.10	Schedule Part 12, Section 4, Energy Strategy. Final version to be issued later today.	PU	05/11/14
2.11	Schedule Part 14, Appendix 2, Gross Service Units. Circa 20 issues under investigation, comments to be issued shortly.	GG	10/11/14
2.12	Schedule Part 16, Change Protocol, outstanding confirmation of indexation awaited from SFT.	Note	-
2.13	Schedule Part 29, Planning Approval, Mott MacDonald reviewed updated CGL report and noted no reliance on Parsons Brinckerhoff report but referenced the risk assessment from same. This is inappropriate and an alternative risk assessment is required.	LE	12/11/14
2.14	PCPs agreed as final to be transmitted to LTA	SF	On-going
2.15	LTA comments may require joint meetings to review.	SF	As required
3.0 Work Streams

Mo,

Can you please forward to the necessary attendees from the NHS.

Thanks,

Stacey

Subject: Re: 12.04.18 4 Bed Workshop Summary

Hi Ken,

I note the attched schedule rev 05 still refers to Air Change rates between 2.7 & 3.5, we are seeking design for 4 Air Changes to all 14 rooms. Can you confirm that this is the brief to WW

Regards

Ronnie

From: K Hall

To: Douglas Anderson, Kamil Kolodziejczyk, Ronnie Henderson, Stewart McKechnie
Cc: Colin Grindlay, Andrew McColl
Mail Number: MPX-MM-000503
Subject: 12.04.18 4 Bed Workshop Summary

Confirmation of Key Points discussed.

Attendees: as attached.
Marked Up Drawings Tabled: as attached.
Agenda: as below - (MPX-GC-026334)
Date and Time: 12.04.18 @ 13.00Hrs

1.0 SM noted concerns on agreement from the previous workshop No1 that the objective of workshop No2 was to obtain agreement in principle on the draft drawings being tabled to allow progress to continue on 4 bed design. This was due to NHSL held up at another meeting, and no delegated authority at the workshop.

Action. Concerns resolved as Ronnie Henderson joined the workshop at 13.30.

A. 4 BED Agenda Item

2.0 14 Rooms in question tabled based on the previous Rev 05 schedule. Rooms cross referenced drawings against the schedule. See attached schedule and drawings over viewed.

3.0 Room "M" type. NHSL noted environmental matrix notes supply and extract. Drawing tabled and site inspection has no changes to the extract.

Action: TUV SUD to confirm design intent to comply with the environmental matrix.

4.0 Area I + J. NHSL requested actual air change rates be confirmed given the increase in one extract system rather than perhaps introducing it across the 3 systems in the locale.

Action: Increase in air change rate(s) to be identified due to noise concerns.

5.0 Physical sizes of all increased duct sizes to be verified at site to confirm any spatial constraints.

Post meeting note: Surveys confirmed to proceed 18.04.18. Findings to be shared with NHSL.

6.0 NHSL confirmed agreement in principal to the strategy tabled, and to proceed to the next stage of site survey based on drawings tabled. Thereafter RDD pack to be submitted for speedy approval.

7.0 Spare capacity. TUV SUD tabled the initial draft assessment:

Supply: No impact as being maintained at 4ACH as per the Environmental Matrix.

Extract: AHU-04-06: extract up by 23%.
Extract: AHU-04-07: extract up by 10%.
Extract: AHU-04-08: extract up by 15%.
Extract: AHU-02-23: extract up by 36%.
Extract: AHU-04-04: extract up by 6%.

TUV SUD noted dialogue with Supplier of AHU being undertaken.

Action: Spare capacity impact analysis document to be issued after site checks carried out on spatial review to identify impact on current spare capacity to allow NHSL to consider if the design can proceed on this basis.

B. Spare Capacity Document

NHSL noted receipt of spare capacity document. Comments on the document to be tabled at next workshop.

8.0 NHSL noted the document issued per department had the comments removed that were in the original spare capacity document issued. Specifically for example the fans in relation to 10% spare capacity comment. NHSL reiterated clarity if the fans had 25% spare capacity, this was confirmed by TUV SUD.

Action: TUV SUD to confirm statement made at the meeting, ventilation 25% design spare capacity on the fans.

C. Schneider Agreement

9.0 TUV SUD statement distributed at the meeting,

Action: NHSL to feedback at next workshop.

D AOB

10.0 NHSL requested Thursday meetings continue, perhaps alternated mechanical and electrical depending on topics to be resolved.

11.0 TUV SUD queried if generator load profile document had been returned by NHSL / MPX.

MPX confirmed after meeting TUV SUD were issued the document on 10.04.18.

Action: TUV SUD to confirm feedback on NHSL comments received.

12.0 NHSL noted query regarding earth cable and fire rated cabling. To be discussed and agreed at next workshop. NHSL requested formal confirmation to the points raised within original calculations feedback.

Action: TUV SUD to respond to Aconex MPX-GC-026161 dated 29.03.18.

Next meeting: Thursday 19.04.18, agenda to be issued prior to meeting.

Attachments: RIE_Childrens hospital issues log-rec from IOM 25 June 2019.pdf

For the avoidance of doubt, this transmittal, all attachments and our ongoing discussions concerning ventilation proceed entirely without prejudice to our whole rights, remedies and pleas and cannot be referred to or relied upon by you in any circumstances whatsoever without our express consent.

Please find attached first issues log just received from IOM.

This follows previous emails and a discussion at yesterday's Steering Group meeting.

We confirm our availability to participate in a telephone conversation on these matters at 10.00am this Friday and to meet before at IHSL's request.

We note Bob Brown's recent email to assist in these matters and we will advise availability of the Board's AE in due course.

We look forward to hearing from you at your earliest convenience.

Meantime we continue to reserve our whole rights, remedies and pleas.

Regards

Brian

Area	item	Issue
General	Systems do not appear to have been commissioned well	Various issues identified below
General	Swirl diffusers have been widely used in the development.	Not normally used in critical areas like theatres as they can be difficult to measure accurately with balometers and they can impact on wound site velocity
Preparation	Some areas are not completed and ready for handover. Eg ceiling tiles still missing	
Theatres	Very limited extract in theatre corridors. Corridors are not at 0 absolute pressure and do not meet required 7 ach/hr (SHTM03-01 part A appndix 2 Table A2)	No escape for surplus air. Could impact on open door protection. Pressure in corridors is pushing fire doors open
Theatres	Issues with doors, door actuators, closers and interlocking to DU's	
Theatres	Some prep rooms do not meet reaquired air supply volumes. (theatres 35, 31, 32, 33 and 38)	Should be 100l/s for SPS room.
Theatres	Most theatres do not properly control temperature	There are a number of faulty control valves on plant/heater batteries
Theatres	Concers about open door protection (eg theatre 34)	Theatre supply 1171, LLE365, scrub 73. Leaves 733 for open door vs required 750.
Theatres	UCV clean zone not marked in flooring - not tape but alternative coloured zone or lines in flooring.	Para 7.108 of SHTM 03-01 part A and Para 6.26of HBN 26 which states 'In theatres with ultra-clean ventilation the floor area enclosed by the hood should be marked with lines or a contrasting coloured area of flooring'.
Theatres	Some fabric issues in theatres (eg holes to fill and under benching gaps to fill)	
Theatres	Theatre 33 - 4 cells fail 0.2 test at 0.17m/s. Filter screen may have been adapted	Re-commission UCV - may need HEPA filters as pressure drop is 170pa vs typical 100/110 for clean filters
Theatres	It is understood that extract grilles in DU are supplied one from each theatre.	Systems will need to be interlocked so both theatres are running when any one is in use.
Theatres	Dirty utility extract rates do not meet requirements in some theatres. Should be 410l/s.	Theatres 30, 36, 37, 33, 38.
Theatres	issues on some theatre light stems, covers missing, not well fitted and cabling exposed	
Theatres	Individual grilles in conventional theatres not balanced which can impact on air flows at patient wound site.	BSRIA Guide AG 3/89.3 Table 1 page 10 requires them to be within 10% of lowest grille reading.
Theatres	Noise slightly high in UCV theatres	measurements 3.5 dbA above requirements. We would expect new facilities to meet the SHTM stsndard.
Theatres	UCV hepa filter pressure drops relatively high (140-170 pa) compared with expected 100/110 pa for new filters	
Theatres	Hepa filter screens on UCV are distorted in places	
Isolation rooms	Several isolation rooms on one AHU. HBN 04-01 supplement 1 (2013) Para 2.37 states that ideally each isolation suite should have its own supply and extract system.	Para 2.37 of HBN 04-01 states that ideally each isolation suite should have its own dedicated supply and extract system
Isolation rooms	Some isolation rooms not achieving the required 10 ach/hr	Min running at 5 ach and some just under 10
Isolation rooms	Back up arrangements appear to be very complex and as such likely to be challenging in future	
HDU's	Only achieving 3-4 ach/hr vs required 10	NHS have apparently agreed this??
AHU's	Filter pleat orientation incorrect on top row of final filters	Should be vertical
AHU's	Pre filters showing signs of bypass	
AHU's	Magnahelic gauges not marked for clean and dirty limits	
AHU's	Insufficient access for cleaning (eg inlets) and access hatches are too small for cleaning/maintenance	
AHU's	Some duct traverse test points are not plugged	
AHU's	Surplus drip tray in AHU (?humidifier removed?). Tray drain is not blanked off	
AHU's	Cooling coil drip tray area not easy to clean. Cooling coil baffles cannot be easily removed due to cable installation	
AHU's	Trap arrangements incorrect. No suitable air gaps and traps dirty and incorrectly installed	
AHU's	Magnahelic gauge scale too wide	1-500pa wheras 1-250 reflects likely filter pressure drops
AHU's	Motorised dampers take a long time to open and close which impacts on the speed of auto-changeover	No spring return fitted so may not close in the event of power failure.
AHU's	Plant labelling incorrect and shows incorrect areas served.	Temporary labelling installed
AHU's	Branch ducts not generally marked up to show areas served	
AHU's	Auto change over arrangements need to be fully tested. Some MD's do not close on plant isolation and some units will not re-start after both motors have been isolated.	
AHU's	Some motors running at over 95% speed so there is limites scope for system to overcome dirty filter pressure drop and maintain system performance	
BMS	Communication problems beteen BMS and AHU (eg theatre 33)	
BMS	It is not clear if critical plant will operate in stand alone mode in the event of issues with BMS or comms	

AUHs	cableing inside AHU also cable connectors inside AHU, potentail for electrical faults to cause as ource of fire within the airstraem. Potentail for smoke/fume to enter clinical areas	Similar situation was found at an NHS hopspital in the NorthEast 2016 all wiring had to be removed from AHUs before handover to Trust

High Value Change Notice

Project:	**RHCYP & DCN**

1 – Issue of Change Notice to Project Co			
Title:	**Paediatric Critical Care Ventilation**		
Reference No:		**Date:**	
Target Cost Capital:	**£1.9m**	**Target Cost Revenue:**	**TBA**

High Value Change Requirements (Schedule Part 16, Section 4, Clause 2.1.3)

In accordance with Schedule Part 16 (Change Protocol), the Board requires Project Co to Design, Supply and Install a ventilation system or systems capable of delivering 10 air changes/hour at +10kpa as per SHTM 03-01, Appendix 1, Table A1 to the following rooms:

1-B1-065 including 1-B1-022, 1-B1-069, 1-B1- 076 and 1- B1-071 which are all open to 1-B1-065
1-B1-075
1-B1-063
1-B1-037
1-B1-031
1-B1-021
1-B1-020
1-B1-019
1-B1-009

All environmental requirements for all spaces served by these systems shall be met.

All works to be carried out and monitored after and with reference to a collaborative full Stage 3 HAI SCRIBE assessment being approved by NHS Lothian.

Design development to include input from the board and all appropriate stakeholders.'

Value for Money Assessment (Schedule Part 16, Section 4, Clause 2.1.4)

To allow the Board will assess whether the High Value Change Stage 2 Submission offers it value for money the submission shall include as a minimum the following information:

- A detailed and fully quantified pricing schedule for the construction works
- A detailed breakdown of all Preliminaries and general cost items
- Construction issue drawings and specification
- Proposed construction programme
- Construction phase method statement

Date by which parties are required to meet to review the High Value Change	*Input 5BDs*

Notice and agree the content for the High Value Change Proposal (Schedule Part 16, Section 4, Clause 2.3.1)	*following receipt of Notice*

To: **IHS Lothian**

We require the Change described above.
Please advise when Project Co will submit a High Value Change Proposal for the above.

Signed on behalf of NHS Lothian: ……..

Name of Signatory (type or print): …… ……

Date: ……..

DRAFT

SCOTTISH HOSPITALS INQUIRY

Hearing commencing 24 April 2023

Bundle 12 - Substantive Core Participant responses to Provisional Position Papers and Supporting Documents (External Version) - Volume 2 (of 2)
