**From:** Kolodziejczyk, Kamil K [REDACTED] on behalf of Kolodziejczyk, Kamil K  
**Sent:** 22 July 2015 09:03  
**To:** 'Ken Hall'; 'Greer, Graeme'  
**Cc:** 'Darren Pike'; 'Brown, Maureen'  
**Subject:** RE: Environmental Matrix NHSL Comments Feedback  
**Attachments:** image001.jpg

Hi Ken,

Sorry for the delay. In relation to item 7.0 the Board response is as follows:

*?NHSL confirm following discussion with users that the use of a cooling blanket or cooling cot for the body is appropriate and therefore there is no requirement to have the room at 8 degrees and 25<sup>0</sup>C is acceptable.?*

Furthermore we have reviewed the EM and highlighted our comments in green below.

Regards  
Kamil

**Subject:** RE: Environmental Matrix NHSL Comments Feedback

Good morning Graeme

WW have updated the matrix, any chance of reviewing the attached in line with comments below then we can formally issue if you are in agreement all comments have been captured?

Many thanks

Ken

**Subject:** RE: Environmental Matrix NHSL Comments Feedback

Hi Graeme

I am checking the work WW have performed on the matrix to avoid it going backwards and forwards. Can you review comments prior to issue? I have WW just completing a few minor corrections. Item 7.0, body view room is one I am thinking if you could clarify the agreed position.

Many thanks

Ken

Project Co shall update the Environmental Matrix to reflect the following Board comments

- 1.0 Update the Environmental Matrix shall be updated by Project Co to reflect all the rooms and room types in the proposed Facility, this should be based on an updated Schedule of Accommodation that has been commented on separately by the Board. This also needs to reflect the names and room numbers in the GSU table, individual room numbering being applied. **OK**
- 2.0 Include the requirements contained in the Clinical Output Specification including but not limited to the requirement that theatre temperatures are to be able to be raised to 31°C for certain operations. We have made reference to the figure of 31°C in the Guidance Notes. ?Theatre temperatures are to be able to be raised to 31°C for certain operations.?

Temperature control in theatres is covered in the Operational Design Notes V5 14<sup>th</sup> Oct2014 for RHSC Theatres 1 & 2. Operating theatres 1-P1-032 and 1-P1-044 shall operate normally as detailed in the Environmental Matrix. These rooms shall be provided with a manual control to raise the temperature to 31°C within a period of 2 hours. This manual control function shall be logged in the BMS and the temperature requirements of the Environmental Matrix shall not apply for the duration of the elevated temperature operation. **THIS HOWEVER IS NOT NOTED ANYWHERE**

- 3.0 Measures shall be assessed, modelled and implemented to demonstrate that the internal air temperature of the following room types to reduce the temperature control from 28°C to 25°C
  - 3.1 Treatment Rooms;
  - 3.2 Consulting Rooms;
  - 3.3 Laboratory;
  - 3.4 Physiotherapy Studio;
  - 3.5 Recovery.

These room shall not exceed the maximum acceptable level of 25°C for more than 50 hours per annum. The Temp (max) column within the table has been updated to 25°C for the agreed rooms 3.1- 3.5 above. **OK**

- 4.0 Detailed proposal awaited on bedroom ventilation to achieve balanced/negative pressure relative to corridor. The single bedrooms have had their ensuite extract increased to achieve a balance within the room, this has been noted within the matrix. **NOTE 26 AND VENTILATION TYPE HAVE NOT BEEN ALTERED**
- 5.0 Colour rendering all stated as 80 where certain areas should be 90 Amended. **NEEDS TO BE CHECKED FOR ALL**
- 6.0 There also need to have a consistent approach e.g. guidance notes and ED body view room stated as 28 -8, bereavement suite body view room stated as 25 -8. The figure of 25-8 is now reflected within the matrix. **OK**
- 7.0 Further discussion is required on the minimum temperate requirement for the Body View Room. Awaiting confirmation on this one from the client, however discussion at the meeting on the 11/11/14 was that rather than take the room temperature down to 8°C which would require specialist cooling they would look at providing a cold blanket for the body and room temperatures would be retained as a normal room. **NHS confirm following discussion with users that the use of a cooling blanket or cooling cot for the body is appropriate and therefore there is no requirement to have the room at 8 degrees and 25°C is acceptable.**

P1	Combined Theatres
Q1	Combined Radiology
R1 - R2	Office / Admin Support Services
S1 - S7	Combined Facilities / Infrastructure Support Services
T1	Plant
U1	Shelled Space

The following table indicates Board Comments, initial response together with the Environmental Matrix to reflect the following Board comments

	Item	Initial Response	Feed back	Reconciliation
1	Update the Environmental Matrix shall be updated by Project Co to reflect all the rooms and room types in the proposed Facility, this should be based on an updated Schedule of Accommodation that has been commented on separately by the Board. This also needs to reflect the names and room numbers in the GSU table.	Individual room numbering being applied.	OK	Agreed
2	Include the requirements contained in the Clinical Output Specification including but not limited to the requirement that theatre temperatures are to be able to be raised to 31°C for certain operations.'	We have made reference to the figure of 31°C in the Guidance Notes. 'Theatre temperatures are to be able to be raised to 31°C for certain operations.'	Temperature control in theatres is covered in the Operational Design Notes V5 14th Oct2014 for RHSC Theatres 1 & 2. Operating theatres 1-P1-032 and 1-P1-044 shall operate normally as detailed in the Environmental Matrix. These rooms shall be provided with a manual control to raise the temperature to 31°C within a period of 2 hours. This manual control function shall be logged in the BMS and the temperature requirements of the Environmental Matrix shall not apply for the duration of the elevated temperature operation. THIS HOWEVER IS NOT NOTED ANYWHERE	This statement is now incorporated within the guidance notes of the matrix
3	Measures shall be assessed, modelled and implemented to demonstrate that the internal air temperature of the following room types to reduce the temperature control from 28°C to 25°C- Treatment Rooms, Consulting Rooms; Laboratory; Physiotherapy Studio, Recovery.  These room shall not exceed the maximum acceptable level of 25°C for more than 50 hours per annum	The Temp (max) column within the table has been updated to 25°C for the agreed rooms 3.1- 3.5 above.	OK	Agreed
4	Detailed proposal awaited on bedroom ventilation to achieve balanced/ negative pressure relative to corridor.,	The single bedrooms have had their ensuite extract increased to achieve a balance within the room, this has been noted within the matrix.	NOTE 26 AND VENTILATION TYPE HAVE NOT BEEN ALTERED.	Refer to Matrix
5	Colour rendering all stated as 80 where certain areas should be 90	Amended.	NEEDS TO BE CHECKED FOR ALL	Refer to Matrix
6	There also need to have a consistent approach e.g. guidance notes and ED body view room stated as 28 -8, bereavement suite body view room stated as 25 -8.	The figure of 25-8 is now reflected within the matrix.	OK	Matrix now amended. See item 7 below.
7	Further discussion is required on the minimum temperate requirement for the Body View Room.	Awaiting confirmation on this one from the client, however discussion at the meeting on the 11/11/14 was that rather than take the room temperature down to 8°C which would require specialist cooling they would look at providing a cold blanket for the body and room temperatures would be retained as a normal room.	NHSL confirm following discussion with users that the use of a cooling blanket or cooling cot for the body is appropriate and therefore there is no requirement to have the room at 8 degrees and 25°C is acceptable	Matrix amended to minimum temperature of 18°C in place of 8°C.

**Environmental Matrix - Guidance Notes**

- 1 This workbook is prepared for the Financial Close Stage as an easier reference tool to replace ADB RDS M&E Sheets for the Environmental Criteria elements as described on these sheets.
- 2 The services matrices are produced from the Schedule of Accommodation Sheets.
- 3 The design of the HVAC systems to the theatres shall be in accordance with SHTM 03-01.
- 4 Where radiant panels are indicated in any room in these matrices, detailed design development may remove the need for these without detriment to environmental temperature. This design development is dependant on actual room layout - i.e. whether a room is located adjacent to an external wall, ground bearing floor, roof surface or is internal.
- 5 Ventilation air change rates and the use of natural ventilation in Patient Areas shall be reviewed throughout the detail design process to ensure a maximum internal temperature of 25°C (dry bulb) is not exceeded during normal occupancy. This criteria shall also apply to cellular and open plan office spaces.
- 6 Maximum internal temperatures listed relate to normal occupancy and Summer Design Conditions ; External Summer Conditions for Cooling Plant Selection as per SHTM2025, Enthalpy 54kJ/kgda 26deg°Cdb, 19deg°C wb. External Winter Conditions as per C BSE Guide A Table A 2.2 for locality = - 6°C for Heat Losses, and as SHTM 2025 for locality = -10°C for AHU Ventilation Plant design.
- 7 Examination lamp notes where listed are provisional. Detailed requirements (fixed, mobile, illumination) will be detailed on C sheets as agreed from signed off 1:50 RDS, which shall take precedence over this schedule.
- 8 All lighting levels are derived from CIBSE Lighting Guide LG2.
- 9 Colour rendering refers to C BSE Lighting Design Guide and will be applied throughout.  
"80" : Normal  
"90" - Enhanced to provide close as possible match to natural light for clinical purposes
- 10 Thermostatic Mixing Devices - SHTM 04-01 Guidance shall be employed for specific TRV Type versus listed Area/Activity.
- 11 Standby Lighting to be Grade A throughout .
- 12 The internal temperature in naturally or mechanically ventilated rooms shall not exceed the maximum temperature as listed on these Environmental Matrices provided external summer design criteria is not exceeded .
- 13 Local Radiant Panel PICV's shall have adjustable sensors.
- 14 Local Control BMS Temperature Sensors for ducted reheat zones and chilled water cassettes for hotspots shall be provided with local range adjustment to +/- 2°C of BMS Set Point. BMS set point shall be adjustable via operator/user dialogue through formal FM
- 15 **Typical bedroom** - Design Criteria - SHTM 03-01 Clause 2.11 - internal temperatures in patient areas should not exceed 28°C db for more than 50 hrs per year. Appendix 1 SHTM 03-01 gives 18°C to 28°C float range. NHSL however require that the maximum internal design temperature should not exceed 25°C for more than 50 hrs per year.  
**HDU bed areas** - Design Criteria - HBN 57 gives specific guidance as well as SHTM 03-01 - Appendix 1 for air change rates - 10ac/hr Supply, 18°C to 25°C control range. ( Capability shall be provided but not at the summer and winter external ambient design extremes against the internal maximum and minimum range conditions ).  
The department will be comfort cooled and controlled on a zonal basis.  
Central AHU to be provided with blank section for future provision of humidification.  
**Post theatre recovery areas** - Design Criteria - SHTM 03-01 - Appendix 1 for air change rates - 15ac/hr S&E , 18°C to 25°C control range ( Capability shall be provided but not at the summer and winter external ambient design extremes against the maximum and minimum range conditions ).  
**Critical Care areas** - Design Criteria - SHTM 03-01 - Appendix 1 for air change rates - 10ac/hr Supply for isolation cubicles , 18°C to 25°C control range.( Capability shall be provided but not at the summer and winter external ambient design extremes against the maximum and minimum range conditions). NHSL may require specific rooms to have a control range up to 28°C.  
Central AHU to be provided with blank section for future provision of humidification.
- 16 **Corridor** ventilation may be either mechanical or where the opportunity exists natural. To be determined during detailed design with due regard to clinical functionality.
- 17 **Single Room WC** - SHTM 03-01 Appendix 1 suggests 3ac/hr extract air change rate only. We have applied 10ac/hr extract rate to provide a more robust rate of extract.
- 18 **Diagnostic Rooms** - ( X Ray, CT Scanner, MRI Scanners, Gamma Camera ) - air change rates listed at 8ac/hr. Actual air change rate must be derived through room heat gain analysis and actual equipment guidance.
- 19 **Operating Theatre Laminar Flow/UCV Requirements** - Refer to Operational Policy Documents for specific theatres which require Laminar Flow/UCV canopy style ventilation solution.  
Central AHU to be provided with blank section for future provision of humidification.  
**Operating Theatres 1-P1-032 and 1-P1-044 shall operate normally as detailed in the Environmental Matrix. These rooms shall be provided with a manual control to raise the temperature to 31°C within a period of 2 hours. This manual control function shall be logged on the BMS and the temperature requirements of the Environmental Matrix shall not apply for the duration of the elevated temperature operation.**
- 20 **Small workshop Areas** - Local Extract Ventilation (LEV) unit requirement to be determined from room equipment schedules.
- 21 **Note that Isolation Suite ventilation solutions for this project shall follow HBN 4 Supplement 1 Section 4 Item 4.8 Guidance i.e.**  
A common departmental AHU shall be employed to provide supply air ventilation ( and shall therefore employ duty & standby fans).  
Isolation Rooms En Suite Extracts shall be provided with an independent Isolation Room toilet extract ventilation system.  
Isolation Rooms En Suite Extracts shall be provided with either externally located 3 mtr high discharge stack in a safe location or with extract filters ( H14 ) within a safe change housing outside the building on the suction side of the fan.  
Heating & Cooling the Isolation Suites shall be provided via the ventilation system.
- 22 **Retail Provision** - Service provisions listed are Infrastructure only for future fit-out by retailer. ( Fire detection shall be provided to assist completion).
- 23 **Comfort Cooled Fresh Air** - Where noted as such on the matrix, these are provided via departmental air handling plant via chilled water cooling coils.
- 24 **Body View Room** - A cooling blanket or cooling cot shall be used in this room.
- 25 Anti ligature rooms (17no. off ) will be treated as sealed rooms with Supply at 6ac/hr and Extract to match to achieve a balanced pressure.  
**Single Bedroom** - The design philosophy for ventilation is for a mixed mode operation where natural vent is encouraged which has benefits both physiological with users being partly in control, and from an energy stand point where mechanical vent loading is partly reduced (2/3rds). This strategy results in zero pressure differential regime within the room where supply and extract is balanced.  
**En suite dirty extract volume flow rate has been increased to achieve a balanced ventilation system.**

**MESSAGE**

All,

The Environmental Matrix shall be updated to reflect updated SoA, attached Board's comments (also discussed on 26<sup>th</sup> January and 2<sup>nd</sup> February), comments made during PGs reviews, and shall also include any changes resulting from Changes between the Board and Project Co. Including the following, but not limited to:

- Bio-chemistry Lab;
- Intra Operative MRI;
- Ebola change;
- Seclusion Room.

Due to the extent of Board's comments, which relate to both Financial Close and Design Development post Financial Close, the Matrix is given Status C.

Regards

Kamil

Revision 5 of Schedule Part 6

Board

Name: B. CURRIE

Date: 15/4/16

Sign: [Redacted]

Level: B

Comments:

FOR 20420'S  
COMMENTS REFER  
TO MH-CC-001398

It is intended that the work shall be carried out in accordance with the relevant standards and specifications.

Legal & Regulatory  
Approved by: [Redacted]  
Date: 15/4/16

The following table indicates Board Comments, initial response together with the Environmental Matrix to reflect the following Board comments

	Item	Initial Response	Feed back	Reconciliation
1	Update the Environmental Matrix shall be updated by Project Co to reflect all the rooms and room types in the proposed Facility, this should be based on an updated Schedule of Accommodation that has been commented on separately by the Board. This also needs to reflect the names and room numbers in the GSU table.	Individual room numbering being applied.	OK	Agreed
2	Include the requirements contained in the Clinical Output Specification including but not limited to the requirement that theatre temperatures are to be able to be raised to 31°C for certain operations.'	We have made reference to the figure of 31°C in the Guidance Notes. 'Theatre temperatures are to be able to be raised to 31°C for certain operations.'	Temperature control in theatres is covered in the Operational Design Notes V5 14th Oct2014 for RHSC Theatres 1 & 2. Operating theatres 1-P1-032 and 1-P1-044 shall operate normally as detailed in the Environmental Matrix. These rooms shall be provided with a manual control to raise the temperature to 31°C within a period of 2 hours. This manual control function shall be logged in the BMS and the temperature requirements of the Environmental Matrix shall not apply for the duration of the elevated temperature operation. THIS HOWEVER IS NOT NOTED ANYWHERE	This statement is now incorporated within the guidance notes of the matrix
3	Measures shall be assessed, modelled and implemented to demonstrate that the internal air temperature of the following room types to reduce the temperature control from 28°C to 25°C- Treatment Rooms, Consulting Rooms; Laboratory; Physiotherapy Studio, Recovery.  These room shall not exceed the maximum acceptable level of 25°C for more than 50 hours per annum	The Temp (max) column within the table has been updated to 25°C for the agreed rooms 3.1- 3.5 above.	OK	Agreed
4	Detailed proposal awaited on bedroom ventilation to achieve balanced/ negative pressure relative to corridor.,	The single bedrooms have had their ensuite extract increased to achieve a balance within the room, this has been noted within the matrix.	NOTE 26 AND VENTILATION TYPE HAVE NOT BEEN ALTERED.	Refer to Matrix
5	Colour rendering all stated as 80 where certain areas should be 90	Amended.	NEEDS TO BE CHECKED FOR ALL	Refer to Matrix
6	There also need to have a consistent approach e.g. guidance notes and ED body view room stated as 28-8, bereavement suite body view room stated as 25 -8.	The figure of 25-8 is now reflected within the matrix.	OK	Matrix now amended. See item 7 below.
7	Further discussion is required on the minimum temperate requirement for the Body View Room.	Awaiting confirmation on this one from the client, however discussion at the meeting on the 11/11/14 was that rather than take the room temperature down to 8°C which would require specialist cooling they would look at providing a cold blanket for the body and room temperatures would be retained as a normal room.	NHSL confirm following discussion with users that the use of a cooling blanket or cooling cot for the body is appropriate and therefore there is no requirement to have the room at 8 degrees and 25°C is acceptable	Matrix amended to minimum temperature of 18°C in place of 8°C.

NHSL Reference	NHSL Comment	Response	Environmental Matrix Status	Drawing Implication	FC Comment	Post FC Comment
1	Technical Submittal MER-XX-02- TS-015 appears to contradict environmental req 13 by way of radiant panel controls.	Req 13 has been deleted from the matrix and Mercury's local submittal takes precedent.	Now updated.	X	X	✓
2	1-B1-010 medical gas cylinder store. SHPM 02-01 states medical cylinders stored fully require mechanical ventilation, please confirm no ventilation provided.	Extract ventilation has been provided. Matrix updated and drawings where appropriate.	Now updated.	X	X	✓
3	ITS room maximum temperatures stated as "Manufacturer Dependent", this is not acceptable, temperatures to be stated. Room has 300h mechanical extract, therefore heating type should be Adjacent space transfer air and temperatures accordingly.	The manufacturer maximum temperature guidelines are higher than 20°C. It does not appear reasonable to indicate heating to a cupboard. <small>Refer to the design drawings for details. Generally, the extract is via the en-suite which is in line with SHPN 04. Where no ensuite is present, extract is via the room.</small>	No action required	X	X	✓
4a	Business cubicles and technicians not shown with any extract ventilation.	Refer to the design drawings for details. Generally, the extract is via the en-suite which is in line with SHPN 04. Where no ensuite is present, extract is via the room. <small>Refer to the design drawings for details. Generally, the extract is via the en-suite which is in line with SHPN 04. Where no ensuite is present, extract is via the room.</small>	No action required	X	X	✓
4b	Drawing title, supply stated as "in line with SHPN 04" and extract stated as "To match total bedroom air volume", design development review required.	Actual figures will be noted and the note relating to the SHPN will be removed. <small>Refer to the design drawings for details. Generally, the extract is via the en-suite which is in line with SHPN 04. Where no ensuite is present, extract is via the room.</small>	Now updated.	X	X	✓
5	Technical Submittal MER-XX-02- TS-015 shows room 1-B1-057 with a radiant panel which contradicts Environmental Matrix room 1-B1-057 warm air radiat battery.	The air is heated by a heater battery which is BMS controlled as per the matrix.	No action required	X	X	✓
6	Where ventilation rates 10ls per person are stated, room occupancy to be detailed and ventilation rates calculated.	These particular areas have been designed based on occupancies, occupancy figures and ventilation rates have been added to these areas to provide clarity.	Now updated	X	X	✓
7	1-B1-063 Stated as supply air 400h, extract via en-suite, this room does not have en-suite facilities.	Refer to the design drawings for details. Generally, the extract is via the en-suite which is in line with SHPN 04. Where no ensuite is present, extract is via the room. <small>Refer to the design drawings for details. Generally, the extract is via the en-suite which is in line with SHPN 04. Where no ensuite is present, extract is via the room.</small>	No action required	X	X	✓
8	1-B1-080 has an area of 8m <sup>2</sup> which is not noted in the matrix. FCA is populated area.	A review will be carried out and any blank GFA rates will be noted - Updated schedule of accommodation required for this item.	Now updated	X	X	✓
9	3-C1-2-001 review ventilation type, only showing supply when 400h supply and extract.	The matrix shows 4 air changes supply and extract. <small>Refer to the design drawings for details. Generally, the extract is via the en-suite which is in line with SHPN 04. Where no ensuite is present, extract is via the room.</small>	No action required	X	X	✓

NHSL Reference	NHSL Comment	Response	Environmental Matrix Status	Drawing Implication	FC Comment	Post FC Comment
10	Room 1-G3-003/025/001 bathroom temperatures stated as 26 / 20 with adjacent space transfer air from area with temperatures of 28 / 18.	These bathrooms have their own radiant panel.	Now updated	X	X	✓
11	Similarly isolation bedroom 3-C1.4-040, temperatures stated as 28 / 21 with adjacent space transfer air from area with temperatures of 28 / 18, ventilation described as "balanced".	The adjacent area lobby 3-C1.4-039 is heated via heater battery and will be at least 21°C. Matrix has been updated.	Now updated	X	X	✓
12	3-C1.7-093, 094, 095 supply and extract "to suit location" not acceptable.	Air change rates will be noted and the "to suit location" will be removed.	Now updated	X	X	✓
13	G-02-036 supply and extract "to suit location", statement "to suit location" is not acceptable.	Air change rates will be noted and the "to suit location" will be removed.	Now updated	X	X	✓
14	Theatre ventilation stated as "in line with SHTM 03-01", correct, this is a BCR requirement. However detail surplines are not mentioned in SHTM 03-01, I would suggest SHPN 35 part 2. The required ventilation to be designed and detailed.	In line with the SHTM 03-01 removed and air change rates added.	Now updated	X	X	✓
15	1-HQ-021 is currently labelled a single bedroom but it is an isolation room, review ventilation.	This room function was RPH and has been designed as an isolation room (matrix has been updated).	Now updated	X	X	✓
16	1-P1-003 and 005 are bedrooms, not bathrooms.	Bathroom changed to bedroom.	Now updated	X	X	✓
17	Kitchen states DW172 dependant, actual design detail to be added.	Design details will be noted and "DW172" will be removed.	Now updated	X	X	✓
18	Complex Estate SOA areas.	A review will be carried out and any blank GFA rates will be noted.	Now updated	X	X	✓
19	Room B-S3-002 and 005 stated in Environmental Matrix as Adjacent Space Transfer Air, however shown with radiant panel on drawing.	Matrix will be updated with radiant panel notes.	Now updated	X	X	✓

NHSL Reference	NHSL Comment	Response	Environmental Matrix Status	Drawing Implication	FC Comment	Post FC Comment
20	ADB code reference should be confirmed.	ADB code reference is an unnecessary column for the use of this matrix as the column will be deleted from the environmental matrix.	Now updated	K	X	✓
21	Last column not filled. What does it refer to?	This column is for IET prep work but this column has now been superseded by the registration document. Column will be deleted from the environmental matrix.	Now updated	K	X	✓
22	B-53-002 & B-54-001 can this temp be increased to 18°C	Temperature will be altered to 18°C	Now updated	K	X	✓
23	Disposal hold - can minimum be reduced to 15.	Sensor could be set to 14°C rather than 18°C but the reduction in the maximum temperature from 28°C to 25°C is problematic though so if required, cooling will be need to be added - Confirmed at meeting that 28°C is to be retained.	Now updated	K	X	✓
24	During a recent PO it was made clear that due to the nature of the research being carried out in the Clinical Research Department in rooms HQ-013, 014, 016 and 020 the temperature cannot at any time exceed 25°C.	Cooling has been provided in HQ-014, HQ-016 and HQ-020. HQ-013 requires cooling. Matrix has been updated to reflect this but drawing requires updating.	Environmental Matrix updated awaiting instruction to update drawing.		X	✓
25	Further to the recent discussion regarding HEPA filters in the isolation rooms the matrix should have been updated to reflect this.	The matrix doesn't state HEPA filter requirements but all isolation rooms have the capability of HEPA filters being installed.	No action required	K	X	✓
26	G-11 bedrooms with back where most bedrooms are taken as back	This is a CAHMS bedroom so 5 ACH has been utilized, reference to natural ventilation will be removed.	Now updated	K	X	✓
27	G-54-004, no supply air	Supply air reference will be added.	Now updated	K	X	✓
28	G-55-016, Cooling - Yes, Cooling Type - None.	Control cooled fresh air is now noted.	Now updated	K	X	✓
29	G-01-007, Cooling - No, Cooling Type - Comfort cooled fresh air.	Cooling note removed.	Now updated	K	X	✓

THIS IS SCR/ LG2 COMPLIANCE. NO INSTRUCTION FROM THE BOARD REQUIRED

NHSC Reference	NHSC Comment	Response	Environmental Matrix Status	Drawing Implication	FC Comment	Post FC Comment
30	G-Q1-151, Heating type - Adjacent space transfer air, supply at 10 fhp positive pressure. Diagnostic rooms. "To suit location"	This room is part of corridor and shares heating and ventilation with corridor.	No action required	X	X	✓
31	G-A1-004, supply 4 ach extract 3 ach positive, different to other diagnostic rooms.	We have treated this room like an office.	No action required	X	X	✓
32	Confirm where natural ventilation, i.e. 1-B1-063065567	Event of ventilation disabled on schedule	Now updated	X	X	✓
33	3-C1-3-018, supply 4 ach extract 3 ach positive, different to other offices.	Air change rates utilised are in line with cellular offices	No action required	X	X	✓
34	14-1-005 Restur area 30m2 with extract at 3 ach.	This room has been updated on the matrix.	Now updated	X	X	✓
35	3-A1-028029, fitness area with central general extract with supply at 10 ach extract at 6 ach.	Ventilation type for these rooms has been updated in line with design.	Now updated	X	X	✓
36	Consider absence detection to all offices, meeting rooms and node rooms.	The lighting control has generally been described in the matrix as either presence or switched. If this is causing confusion the reference to presence could be renamed automatic. As a general note, automatic detection has been used in all suitable areas.	No action required	X	X	✓
37	1-03-002 Circulation Equipment Storage Bays, all others are presence detection.	Automatic controls added.	To be updated	X	X	✓
38	Disposal hold, L32 recommends 200 lux.	100 lux will be changed to 200 lux.	To be updated	X	X	✓
39	IPS room normal lux stated as n/a.	200 lux will be added to the matrix.	To be updated	X	X	✓

NHSL Reference	NHSL Comment	Response	Environmental Matrix Status	Drawing Implication	FC Comment	Post FC Comment
40	GF1-028, 030, 033, 040 and 1-11-028 are described as offices but have local lux of 1000	Local lux fixtures to be removed.	To be updated	X	X	X
41	Anaesthetic rooms, LG2 recommends local lux 1000 and Ra 80	Ra 80 has been noted in the environmental matrix and 1000 lux is for local lighting but 500 lux is for general, also noted in the environmental matrix.	No action required	X	X	X
42	Theatre exit signs (transoms), LG2 recommends normal lux 300 local lux not required and Ra 80	500 lux will be dropped to 300 lux, Ra 90 will be reduced to Ra 80 and local lux will be removed.	Environmental Matrix updated awaiting instruction to update drawings.	X	X	X
43	Preparation rooms and scrub up, LG2 does not require local lux 10,000 – 100,000, or Ra 90	Ra 90 will be reduced to Ra 80 and local lux will be removed.	Environmental Matrix updated awaiting instruction to update drawings.	X	X	X
44	Theatre utility rooms, LG2 recommends local lux 100 – 150 and does not require local lux 10,000 – 100,000, or Ra 90	500 lux will be dropped to 150 lux, Ra 90 will be reduced to Ra 80 and local lux will be removed.	Environmental Matrix updated awaiting instruction to update drawings.	X	X	X
45	Recovery Ward, LG2 does not require local lux 1000 but does recommend Ra80	Ra 80 will be increased to Ra 90 and local lux will be removed.	Environmental Matrix updated awaiting instruction to update drawings.	X	X	X
46	Nurses/oncall bases not shown to have night lighting, confirm this achieved by dimming.	All night lighting is achieved by dimmable fittings.	No action required	X	X	X
47	Reception lobby 1-01-009 to be as other lobby bays, Ra 80 and presence detection.	1-01-009 will be updated to reflect other lobby bays.	To be updated	X	X	X
48	Review colour rendering, e.g. theatre suite, prep, anaesthetic, scrub utility, exit bay at Ra 80. Review consultant examination rooms to have the higher colour rendering of Ra 90. All to be as CBSE LG2.	RA 90 is currently shown in theatres, preparation rooms, scrubrooms, utility rooms and exit bay. Anaesthetic room will be changed to Ra90 from Ra80. We feel that the consultant room as general frame of rooms should remain as Ra80 where Ra80 is required, it will be achieved via the examination luminaires.	Environmental Matrix updated awaiting instruction to update drawings.	X	X	X
49	No absence detection or daylight control detailed included from drawings.	The lighting control has generally been described in the matrix as either presence or switched, if this is causing confusion the reference to presence could be renamed automatic. As a general note, automatic detection has been used in all suitable areas.	No action required	X	X	X

2.1	<p>Current areas of activity;</p> <p><u>Zone A:</u></p> <ul style="list-style-type: none"> <li>• Slab pours completed.</li> <li>• Steel trees progressing.</li> <li>• Ground, 1<sup>st</sup> &amp; 2<sup>nd</sup> floors M&amp;E fit out works ongoing.</li> <li>• Envelope ongoing at Level 3.</li> <li>• Head-track to 2<sup>nd</sup> &amp; 3<sup>rd</sup> floors</li> </ul> <p><u>Zone B &amp; C:</u></p> <ul style="list-style-type: none"> <li>• Frame tables continue.</li> <li>• Pile caps progressing to completion.</li> <li>• Drainage and GF slabs continue.</li> <li>• Velfac windows to be installed at 2<sup>nd</sup> floor next week.</li> <li>• Head-track commenced.</li> <li>• Envelope commenced.</li> </ul> <p><u>Energy Centre:</u></p> <ul style="list-style-type: none"> <li>• Last slab pour today (06/04/16)</li> <li>• Steel work due w/c 18/4/16</li> </ul>	SJ	Update 20/04/16
<b>3.0 FM Update</b>			
3.1	BYES (RH) continue to review design information (RDD). LE reported that BIM review now ongoing.	RH	Update 20/04/16
3.2	BYES updated risk register and monthly report issued 29/03/16. LE confirmed that BMCE have taken action on the BYES risk register comments.	RH	Update 20/04/16

Number	Action	Owner	Date
<b>4.0 Commissioning Update</b>			
4.1	Joint commission meetings continue. Next scheduled for 13/04/16.	-	Ongoing
4.2	M&E commissioning is being co-ordinated in line with the appropriate construction zones.	BMCE	Ongoing
<b>5.0 Equipment Update</b>			
5.1	Equipment meetings have commenced and are progressing well. Meeting dates to be scheduled.	BMCE	13/04/16
<b>6.0 RDD &amp; Design</b>			
6.1	<p>Board tabled their current top 10 issues (and others previously noted) which were noted and issued on the RFI tracker. Key action points are:</p> <ul style="list-style-type: none"> <li>• MRI Chiller Compound.</li> <li>• Lightning protection-to connect to RIE. All agreed this will not happen. Both buildings to be stand alone.</li> <li>• CDS kitchen design, slow progress. BMCE to chase CDS.</li> <li>• Staff attack, alternative proposal to be reviewed – Board require information to be issued from BMCE prior to meeting on 19/04/16.</li> <li>• Conflict on drawings for Video Entry systems to be resolved.</li> <li>• Child Health – Gas bottle store, issues to be resolved</li> <li>• Barrier matting – BMCE to respond, 2 possible options for consideration.</li> <li>• Phone connections (100 direct line) – Need to know where they will be located.</li> <li>• ATD equipment meeting – to have own meeting (Board to arrange)</li> <li>• Kitchen gas supply – DP to issue WSP Fire report.</li> </ul>	BMCE	Update 20/04/16
6.2	<p>BMCE noted that their top 10 issues. Some noted throughout notes and below:</p> <ul style="list-style-type: none"> <li>- Flood defence detail. Consort approval.</li> <li>- RDD returns – need to stick to timescales</li> <li>- Brickwork Bond (Flemish or Stretcher) to Zone A</li> <li>- Helipad- approval awaited.</li> <li>- Presence protection- LE requested a copy of the David Stillie location schedule and that any mark ups of this or a similar nature are made on the M&amp;E drawings rather than the HLM drawings. The M&amp;E drawings are current and being used for manufacture, whereas the HLM drawings can be changed at a later date as record drawings.</li> </ul>	LE  Board	  08/04/16
<b>7.0 RFI</b>			
7.1	Latest RFI tracker issued on 06/04/16. LE to arrange for the latest available "Topography Survey" that was taken for change 002.	LE	11/04/16

Number	Action	Owner	Date
<b>8.0 Change</b>			
8.1	None by exception.		
<b>9.0 Charities</b>			
9.1	Meeting with TCT scheduled for 12 April 2016.	SC/LE/JM	12/04/16
9.2	GC discussed ATD fees with SC. LE reported that Rod Shaw noted fees seem high. LE would like further details of reasons.	Board	08/04/16
9.3	SC reported that another ATD project has been approved to enhance the Child Protection Unit. Note; To be issued by the Board.	Board	Update 20/04/16
<b>10.0 Interface Activities</b>			
10.1	BC previously requested early sight of the Construction (temporary and permanent) details for the Link Connection. BMCE created list of all drawings. Dave Webster (DW) will follow up.	LE/DW	13/04/16
<b>11.0 Communications</b>			
11.1	Dates to be agreed for the Topping Out Ceremony. Likely to be end-June 16.	DP/BC	Ongoing
11.2	Next Communications scheduled for 26/04/16.	-	-
<b>12.0 Health and Safety</b>			
12.1	1 red card and 2 yellow cards issued. Further details to be released in Construction Report. Closed.	-	-
<b>13.0 AOB</b>			
	None.		
The Next meeting will take place on 20/04/16 at 10:00 In MacKinlay			

**From:** Kolodziejczyk, Kamil K  
**Sent:** 15 April 2016 14:02  
**To:** Currie, Brian  
**Cc:** Greer, Graeme; Macrae, Colin; Bain, Kelly J  
**Subject:** Environmental Matrix  
**Attachments:** Environmental Matrix Board Changes rev 05.pdf

Hi Brian,

We now have reviewed and commented on the Environmental Matrix. The comments we made previously were incorporated within this revision, with few minor issues, however please note the Matrix wasn't updated to reflect any comments made during PGs, resulting from Change process and SoA.

We propose status B based on the Financial Close comments.

The following is a draft response to PCo. The section in red requires PCo to re-submit the matrix once the remaining known changes are incorporated however PCo is keen to start production of Room Data Sheets now so can you please confirm you are happy for them to progress without re-submitting the matrix or you would prefer to see updated matrix before RDSs?

"All,

*Please note that the Board reviewed the Environmental Matrix and provided comments within the attached. Relative to the Financial Close comments, the Environmental Matrix is given status B.*

*The Board require the Environmental Matrix is re-submitted for the Board's review, including the following comments (as per MM-GC-001184):*

- *Updated Schedule of Accommodation,*
- *Changes resulting from Change process,*
- *Changes resulting from Production Groups comments,*
- *Design Development,*
- *Plus any other subsequent changes.*

*Project Co shall also review all related drawings against the Environmental Matrix with respect to anomalies between the detail on the drawing and the detail within the Environmental Matrix. Particular note to be given to the method of cooling provision e.g. Comfort Cooled Fresh Air or Ceiling Cassette Chilled Water. It is also noted that there are areas of over and under provision of both heating and cooling.*

*IHSL are also reminded that the reference design has no relevance to the current contract, and IHSL are to comply with the Project Agreement and in particular the BCR's and PCP's. Any non-compliance with the BCR's or PCP's should be highlighted to the Board."*

Regards  
Kamil

## Royal Hospital for Sick Children and Department for Clinical Neurosciences - Edinburgh

### RHSC / DCN RDS Environmental Matrix

Dept Code	Index
~	Cover
~	Guidance Notes
~	Room Function Reference Sheet
~	Occupancy & Equipment Load Allowances
A1 - A4	Front Door - A&E / Assessment Ward
B1	Critical Care / HDU / Neonatal Surgery
C1- C5	RHSC In Patient Pathway / Ward Care
D1 - D10	RHSC Ambulatory Care
E1	Pod
F1	Child and Adolescent Mental Health
G2 - G3	Clinical Support
H1 - H3	Academic
I1 - I2	Facilities / Infrastructure Support Services
J1 - J2	Patient / Family Support
K1 - K2	Family Facilities
L1 - L2	DCN In Patient Pathway / Ward Care
M1- M4	DCN Support Space
N1	DCN Out Patient Departments
P1	Combined Theatres
Q1	Combined Radiology
R1 - R2	Office / Admin Support Services
S1 - S7	Combined Facilities / Infrastructure Support Services
T1	Plant
U1	Shelled Space

Document highlighted items amended inline with NHS comments.

26th November 2015 & 11th February 2016

26th November comments in red and the 11th February comments in amber

WW-XX-XX-DC-XXX-001  
Rev 05

The following table indicates Board Comments, initial response together with the Environmental Matrix to reflect the following Board comments

	Item	Initial Response	Feed back	Reconciliation
1	Update the Environmental Matrix shall be updated by Project Co to reflect all the rooms and room types in the proposed Facility, this should be based on an updated Schedule of Accommodation that has been commented on separately by the Board. This also needs to reflect the names and room numbers in the GSU table.	Individual room numbering being applied.	OK	Agreed
2	Include the requirements contained in the Clinical Output Specification including but not limited to the requirement that theatre temperatures are to be able to be raised to 31°C for certain operations.'	We have made reference to the figure of 31°C in the Guidance Notes. 'Theatre temperatures are to be able to be raised to 31°C for certain operations.'	Temperature control in theatres is covered in the Operational Design Notes V5 14th Oct2014 for RHSC Theatres 1 & 2. Operating theatres 1-P1-032 and 1-P1-044 shall operate normally as detailed in the Environmental Matrix. These rooms shall be provided with a manual control to raise the temperature to 31°C within a period of 2 hours. This manual control function shall be logged in the BMS and the temperature requirements of the Environmental Matrix shall not apply for the duration of the elevated temperature operation. THIS HOWEVER IS NOT NOTED ANYWHERE	This statement is now incorporated within the guidance notes of the matrix
3	Measures shall be assessed, modelled and implemented to demonstrate that the internal air temperature of the following room types to reduce the temperature control from 28°C to 25°C- Treatment Rooms, Consulting Rooms; Laboratory; Physiotherapy Studio, Recovery.  These room shall not exceed the maximum acceptable level of 25°C for more than 50 hours per annum	The Temp (max) column within the table has been updated to 25°C for the agreed rooms 3.1- 3.5 above.	OK	Agreed
4	Detailed proposal awaited on bedroom ventilation to achieve balanced/ negative pressure relative to corridor.,	The single bedrooms have had their ensuite extract increased to achieve a balance within the room, this has been noted within the matrix.	NOTE 26 AND VENTILATION TYPE HAVE NOT BEEN ALTERED.	Refer to Matrix
5	Colour rendering all stated as 80 where certain areas should be 90	Amended.	NEEDS TO BE CHECKED FOR ALL	Refer to Matrix
6	There also need to have a consistent approach e.g. guidance notes and ED body view room stated as 28 - 8, bereavement suite body view room stated as 25 -8.	The figure of 25-8 is now reflected within the matrix.	OK	Matrix now amended. See item 7 below.
7	Further discussion is required on the minimum temperate requirement for the Body View Room.	Awaiting confirmation on this one from the client, however discussion at the meeting on the 11/11/14 was that rather than take the room temperature down to 8°C which would require specialist cooling they would look at providing a cold blanket for the body and room temperatures would be retained as a normal room.	NHSL confirm following discussion with users that the use of a cooling blanket or cooling cot for the body is appropriate and therefore there is no requirement to have the room at 8 degrees and 25°C is acceptable	Matrix amended to minimum temperature of 18°C in place of 8°C.

NHSL Reference	NHSL Comment	Response	Environmental Matrix Status	Drawing Implication	FC Comment	Post FC Comment
1	Technical Submittal MER-XX-SL-TS-015 appears to contradict environmental note 13 by way of radiant panel controls.	Note 13 has been deleted from the matrix and Mercury's technical submittal takes precedent.	Now updated.	✗	✗	✓
2	1-B1-010 medical gas cylinder store, SHTM 02-01 states internal cylinders stores may require mechanical ventilation, please confirm no ventilation provided.	Extract ventilation has been provided. Matrix updated and drawings where appropriate.	Now updated.	✓	✗	✓
3	IPS room max/min temperatures stated as "Manufacturer Dependant", this is not acceptable, temperatures to be stated. Room has 3ac/h mechanical extract therefore heating type should be Adjacent space transfer air and temperatures accordingly.	The manufactures maximum temperature guidelines are higher than 30°C. It does not appear reasonable to indicate heating to a cupboard.	No action required	✗	✗	✓
4A	Isolation cubicles and bedrooms are not shown with any extract ventilation.	Refer to the design drawings for details. Generally, the extract is via the en-suite which is in line with SHPN 04. Where no ensuite is present, extract is via the room.	No action required	✗	✗	✓
4B	Gowning lobby, supply stated as "in line with SHPN 04" and extract stated as "To match total bedroom air volume", design development review required.	Actual figures will be noted and the note referring to the SHPN will be removed.	Now updated	✗	✗	✓
5	Technical Submittal MER-XX-SL-TS-015 shows room 1-B1-057 with a radiant panel which contradicts Environmental Matrix room 1-B1-057 warm air reheat battery.	The air is heated by a heater battery which is BMS controlled as per the matrix.	No action required	✗	✗	✓
6	Where ventilation rates 10l/s per person are stated, room occupancy to be detailed and ventilation rates calculated.	These particular areas have been designed based on occupancies; occupancy figures and ventilation rates have been added to these areas to provide clarity.	Now updated	✗	✗	✓
7	1-B1-063 Stated as supply air 4ac/h, extract via en-suite, this room does not have en-suite facilities.	Refer to the design drawings for details. Generally, the extract is via the en-suite which is in line with SHPN 04. Where no ensuite is present, extract is via the room.	No action required	✗	✗	✓
8	1-B1-090 has an area of 8m2 which is not stated in the matrix. PCo to populate areas.	A review will be carried out and any blank GIFA rates will be noted - Updated schedule of accommodation required for this item.	Now updated	✗	✗	✓
9	3-C1.2-036 review ventilation type, only showing supply when 4ac/h supply and extract.	The matrix shows 4 air changes supply and extract.	No action required	✗	✗	✓

Wallace Whittle

NHSL Reference	NHSL Comment	Response	Environmental Matrix Status	Drawing Implication	FC Comment	Post FC Comment
10	Room 1-G3-003/005/007 bathroom temperatures stated as 28 / 20 with adjacent space transfer air from area with temperatures of 28 / 18.	These bathrooms have their own radiant panel.	Now updated	✗	✗	✓
11	Similarly isolation bedroom 3-C1.4-040, temperatures stated as 28 / 21 with adjacent space transfer air from area with temperatures of 28 / 18, ventilation described as "balanced".	The adjacent area; Lobby 3-C1.4-039 is heated via heater battery and will be at least 21°C. Matrix has been updated.	Now updated	✗	✗	✓
12	3-C1.7-003, 004, 005 supply and extract "to suit location" not acceptable.	Air change rates will be noted and the "to suit location" will be removed.	Now updated	✗	✗	✓
13	G-D2-006 supply and extract "to suit location", statement "to suit location" is not acceptable.	Air change rates will be noted and the "to suit location" will be removed.	Now updated	✗	✗	✓
14	require ventilation stated as in the matrix, correct, and is a B01 requirement. However dental surgeries are not mentioned in SHTM 03-01, I would suggest SHPN 36 part 2. The required ventilation to be designed and detailed.	In line with the SHTM 03-01 removed and air change rates added.	Now updated	✗	✗	✓
15	1-H2-021 is currently labelled a single bedroom but it is an isolation room, review ventilation.	This room function was RFI'd and has been designed as an isolation room (matrix has been updated).	Now updated	✗	✗	✓
16	1-P1-003 and 005 are bedrooms, not bathrooms.	Bathroom changed to bedroom.	Now updated	✗	✗	✓
17	Kitchen states DW172 dependant, actual design detail to be added.	Design details will be noted and "DW172" will be removed.	Now updated	✗	✗	✓
18	Complete Estates SOA areas.	A review will be carried out and any blank GIFA rates will be noted.	Now updated	✗	✗	✓
19	Room B-S3-002 and 005 stated in Environmental Matrix as Adjacent Space Transfer Air, however shown with radiant panel on drawing.	Matrix will be updated with radiant panel noted.	Now updated	✗	✗	✓

Wallace Whittle

NHSL Reference	NHSL Comment	Response	Environmental Matrix Status	Drawing Implication	FC Comment	Post FC Comment
20	ADB code reference should be confirmed.	ADB code reference is an unnecessary column for the use of this matrix so the column will be deleted from the environmental matrix.	Now updated	✗	✗	✓
21	Last column not titled. What does it refer to?	This column to the IET grouping but this column has now been superseded by the categorisation document. Column will be deleted from the environmental matrix.	Now updated	✗	✗	✓
22	B-S3-002 & B-S4-001 can min temp be increased to 18?	Temperature will be altered to 18°C	Now updated	✗	✗	✓
23	Disposal hold – can min temp be reduced to 16.	Sensor could be set to 16°C rather than 18°C but the reduction to the maximum temperature from 28°C to 25°C is problematic though so if required, cooling will be need to be added - Confirmed at meeting that 28°C is to be retained.	Now updated	✗	✗	✓
24	carried out in the Clinical Research Department in rooms H2-013, 014, 016 and 020 the temperature cannot at any time exceed 25°C.	Cooling has been provided in H2-014, H2-016 and H2-020. H2-013 requires cooling. Matrix has been updated to reflect this but drawing requires updating.	Environmental Matrix updated awaiting instruction to update drawing.	✓	✗	✓
25	Further to the recent discussion regarding hepa filtration in the isolation rooms the matrix should have been updated to reflect this.	The matrix doesn't note HEPA filter requirements but all isolation rooms have the capability of HEPA filters being installed.	No action required	✗	✗	✓
26	G-F1 Bedrooms with 6ac/h where most bedrooms are taken as 4ac/h.	This is a CAHMS bedroom so 6 AC/H has been utilised, reference to natural ventilation will be removed.	Now updated	✗	✗	✓
27	B-S4-004, no supply air.	Supply air reference will be added.	Now updated	✗	✗	✓
28	G-S6-016, Cooling - Yes, Cooling Type – None.	Comfort cooled fresh air is now noted.	Now updated	✗	✗	✓
29	G-Q1-007, Cooling – No, Cooling Type - Comfort cooled fresh air.	Cooling note removed.	Now updated	✗	✗	✓

30	G-Q1-161, Heating type – Adjacent space transfer air, supply at 10 l/s/p positive pressure. Diagnostic rooms, "To suit location"	This room is part of corridor and shares heating and ventilation with corridor.	No action required	✗	✗	✓
31	G-A1-004, supply 4 ac/h extract 3 ac/h positive, different to other diagnostic rooms.	We have treated this room like an office.	No action required	✗	✗	✓
32	Confirm where natural ventilation, i.e. 1-B1-063/065/067.	Extent of ventilation clarified on schedule.	Now updated	✗	✗	✓
33	3-C1.3-018, supply 4 ac/h extract 3 ac/h positive , different to other offices.	Air change rates utilised are in line with cellular offices	No action required	✗	✗	✓
34	1-L1-005 Resus area 30m2 with extract at 3 ac/h.	This room has been updated on the matrix.	Now updated	✗	✗	✓
35	G-A1-028/029, Resus area with central general extract with supply at 10 ac/h extract at 6 ac/h.	Ventilation type for these rooms has been updated in line with design.	Now updated	✗	✗	✓
36	Consider absence detection to all offices, meeting rooms and node rooms.	The lighting control has generally been described in the matrix as either presence or switched. If this is causing confusion the reference to presence could be renamed automatic. As a a general note, automatic detection has been used in all suitable areas.	No action required	✗	✗	✓
37	1-D3-002 Circulation Equipment Storage Bays, all others are presence detection.	Automatic controls added.	To be updated	✗	✗	✓
38	Disposal hold, LG2 recommends 200 lux.	100 lux will be changed to 200 lux.	To be updated	✗	✗	✓
39	IPS rooms normal lux stated as n/a.	200 lux will be added to the matrix.	To be updated	✗	✗	✓

NHSL Reference	NHSL Comment	Response	Environmental Matrix Status	Drawing Implication	FC Comment	Post FC Comment
40	G-F1-028, 030, 053, 045 and 1-L1-028 are described as offices but have local lux of 1000.	Local lux figures to be removed.	To be updated	✗	✗	✓
41	Anaesthetic rooms, LG2 recommends local lux 1000 and Ra 80.	Ra 80 has been noted in the environmental matrix and 1000 lux is for local lighting but 500 lux is for general; all as noted in the environmental matrix.	No action required	✗	✗	✓
42	Theatre exit bays (transfers), LG2 recommends normal lux 300 local lux not required and Ra 80.	500 lux will be dropped to 300 lux, Ra 90 will be reduced to Ra 80 and local lux will be removed.	Environmental Matrix updated awaiting instruction to update drawings.	✓	✗	✓
43	Preparation rooms and scrub up, LG2 does not require local lux 10,000 – 100,000, or Ra 90.	Ra 90 will be reduced to Ra 80 and local lux will be removed.	Environmental Matrix updated awaiting instruction to update drawings.	✓	✗	✓
44	Theatre utility rooms, LG2 recommends local lux 100 – 150 and does not require local lux 10,000 – 100,000, or Ra 90.	500 lux will be dropped to 150 lux, RA 90 will be reduced to Ra 80 and local lux will be removed.	Environmental Matrix updated awaiting instruction to update drawings.	✓	✗	✓
45	Recovery areas, LG2 does not require local lux 1000 but does recommend Ra90.	RA 80 will be increased to Ra 90 and local lux will be removed.	Environmental Matrix updated awaiting instruction to update drawings.	✓	✗	✓
46	Nurse/touchdown bases not shown to have night lighting, confirm this achieved by dimming.	All night lighting is achieved by dimmable fittings.	No action required	✗	✗	✓
47	Resus trolley bay 1-D1-009 to be as other trolley bays, Ra 80 and presence detection.	1-D1-009 will be updated to reflect other trolley bays.	To be updated	✗	✗	✓
48	Review colour rendering, e.g. theatre suite, prep, anaesthetic, scrub utility, exit bay all Ra 80. Review consult/ examination rooms to have the higher colour rendering of Ra 90. All to be as CIBSE LG2.	RA 90 is currently shown in theatres, preparation rooms, scrub rooms, utility rooms and exit bay. Anaesthetic room will be changed to Ra90 from Ra80. We feel that the consultant room are general treatment rooms so should remain as Ra80; where Ra90 is required, it will be achieved via the examination luminaire.	Environmental Matrix updated awaiting instruction to update drawings.	✓	✗	✓
49	No absence detection or daylight control detailed included from drawings.	The lighting control has generally been described in the matrix as either presence or switched. If this is causing confusion the reference to presence could be renamed automatic. As a a general note, automatic detection has been used in all suitable areas.	No action required	✗	✗	✓

50	Medical location column states "See Guidance Notes" for every entry and not mentioned in those guidance notes.	This has been superseded by the risk profile document which sets out the medical grouping and classification. Column has been removed.	Now updated	x	x	✓

**Environmental Matrix - Guidance Notes**

- 1 This workbook is prepared for the Financial Close Stage as an easier reference tool to replace ADB RDS M&E Sheets for the Environmental Criteria elements as described on these sheets.
- 2 The services matrices are produced from the Schedule of Accommodation Sheets.
- 3 The design of the HVAC systems to the theatres shall be in accordance with SHTM 03-01.
- 4 Where radiant panels are indicated in any room in these matrices, detailed design development may remove the need for these without detriment to environmental temperature. This design development is dependant on actual room layout - i.e. whether a room is located adjacent to an external wall, ground bearing floor, roof surface or is internal.
- 5 Ventilation air change rates and the use of natural ventilation in Patient Areas shall be reviewed throughout the detail design process to ensure a maximum internal temperature of 25°C (dry bulb) is not exceeded during normal occupancy. This criteria shall also apply to cellular and open plan office spaces.
- 6 Maximum internal temperatures listed relate to normal occupancy and Summer Design Conditions ; External Summer Conditions for Cooling Plant Selection as per SHTM2025, Enthalpy 54kJ/kgda 26deg°Cdb, 19deg°C wb. External Winter Conditions as per C BSE Guide A Table A 2.2 for locality = - 6°C for Heat Losses, and as SHTM 2025 for locality = -10°C for AHU Ventilation Plant design.
- 7 Examination lamp notes where listed are provisional. Detailed requirements (fixed, mobile, illumination) will be detailed on C sheets as agreed from signed off 1:50 RDS, which shall take precedence over this schedule.
- 8 All lighting levels are derived from CIBSE Lighting Guide LG2.
- 9 Colour rendering refers to C BSE Lighting Design Guide and will be applied throughout.  
"80" : Normal  
"90" - Enhanced to provide close as possible match to natural light for clinical purposes
- 10 Thermostatic Mixing Devices - SHTM 04-01 Guidance shall be employed for specific TRV Type versus listed Area/Activity.
- 11 Standby Lighting to be Grade A throughout .
- 12 The internal temperature in naturally or mechanically ventilated rooms shall not exceed the maximum temperature as listed on these Environmental Matrices provided external summer design criteria is not exceeded .
- 13 **Note Deleted**
- 14 Local Control BMS Temperature Sensors for ducted reheat zones and chilled water cassettes for hotspots shall be provided with local range adjustment to +/- 2°C of BMS Set Point. BMS set point shall be adjustable via operator/user dialogue through formal FM
- 15 **Typical bedroom** - Design Criteria - SHTM 03-01 Clause 2.11 - internal temperatures in patient areas should not exceed 28°C db for more than 50 hrs per year. Appendix 1 SHTM 03-01 gives 18°C to 28°C float range. NHSL however require that the maximum internal design temperature should not exceed 25°C for more than 50 hrs per year.  
**HDU bed areas** - Design Criteria - HBN 57 gives specific guidance as well as SHTM 03-01 - Appendix 1 for air change rates - 10ac/hr Supply, 18°C to 25°C control range. ( Capability shall be provided but not at the summer and winter external ambient design extremes against the internal maximum and minimum range conditions ).  
The department will be comfort cooled and controlled on a zonal basis.  
Central AHU to be provided with blank section for future provision of humidification.  
**Post theatre recovery areas** - Design Criteria - SHTM 03-01 - Appendix 1 for air change rates - 15ac/hr S&E , 18°C to 25°C control range ( Capability shall be provided but not at the summer and winter external ambient design extremes against the maximum and minimum range conditions ).  
**Critical Care areas** - Design Criteria - SHTM 03-01 - Appendix 1 for air change rates - 10ac/hr Supply for isolation cubicles , 18°C to 25°C control range.( Capability shall be provided but not at the summer and winter external ambient design extremes against the maximum and minimum range conditions). NHSL may require specific rooms to have a control range up to 28°C.  
Central AHU to be provided with blank section for future provision of humidification.
- 16 **Corridor** ventilation may be either mechanical or where the opportunity exists natural. To be determined during detailed design with due regard to clinical functionality.
- 17 **Single Room WC** - SHTM 03-01 Appendix 1 suggests 3ac/hr extract air change rate only. We have applied 10ac/hr extract rate to provide a more robust rate of extract.
- 18 **Diagnostic Rooms** - ( X Ray, CT Scanner, MRI Scanners, Gamma Camera ) - air change rates listed at 8ac/hr. Actual air change rate must be derived through room heat gain analysis and actual equipment guidance.
- 19 **Operating Theatre Laminar Flow/UCV Requirements** - Refer to Operational Policy Documents for specific theatres which require Laminar Flow/UCV canopy style ventilation solution.  
Central AHU to be provided with blank section for future provision of humidification.  
**Operating Theatres 1-P1-032 and 1-P1-044 shall operate normally as detailed in the Environmental Matrix. These rooms shall be provided with a manual control to raise the temperature to 31°C within a period of 2 hours. This manual control function shall be logged on the BMS and the temperature requirements of the Environmental Matrix shall not apply for the duration of the elevated temperature operation.**
- 20 **Small workshop Areas** - Local Extract Ventilation (LEV) unit requirement to be determined from room equipment schedules.
- 21 **Note that Isolation Suite ventilation solutions for this project shall follow HBN 4 Supplement 1 Section 4 Item 4.8 Guidance i.e.**  
A common departmental AHU shall be employed to provide supply air ventilation ( and shall therefore employ duty & standby fans).  
Isolation Rooms En Suite Extracts shall be provided with an independent Isolation Room toilet extract ventilation system.  
Isolation Rooms En Suite Extracts shall be provided with either externally located 3 mtr high discharge stack in a safe location or with extract filters ( H14 ) within a safe change housing outside the building on the suction side of the fan.  
Heating & Cooling the Isolation Suites shall be provided via the ventilation system.
- 22 **Retail Provision** - Service provisions listed are Infrastructure only for future fit-out by retailer. ( Fire detection shall be provided to assist completion).
- 23 **Comfort Cooled Fresh Air** - Where noted as such on the matrix, these are provided via departmental air handling plant via chilled water cooling coils.
- 24 **Body View Room** - A cooling blanket or cooling cot shall be used in this room.
- 25 Anti ligature rooms (17no. off ) will be treated as sealed rooms with Supply at 6ac/hr and Extract to match to achieve a balanced pressure.  
**Single Bedroom** - The design philosophy for ventilation is for a mixed mode operation where natural vent is encouraged which has benefits both physiological with users being partly in control, and from an energy stand point where mechanical vent loading is partly reduced (2/3rds). This strategy results in zero pressure differential regime within the room where supply and extract is balanced.  
**En suite dirty extract volume flow rate has been increased to achieve a balanced ventilation system.**

### MESSAGE

All,

A47206723

Please note that the Board reviewed the Environmental Matrix and provided comments within the attached. Relative to the Financial Close comments, the Environmental Matrix is given status B.

The Board require the Environmental Matrix is re-submitted for the Board's review, including the following comments (as per MM-GC-001184):

- Updated Schedule of Accommodation,
- Changes resulting from Change process,
- Changes resulting from Production Groups comments,
- Design Development,
- Plus any other subsequent changes.

Project Co shall also review all related drawings against the Environmental Matrix with respect to anomalies between the detail on the drawing and the detail within the Environmental Matrix. Particular note to be given to the method of cooling provision e.g. Comfort Cooled Fresh Air or Ceiling Cassette Chilled Water. It is also noted that there are areas of over and under provision of both heating and cooling.

IHSL are also reminded that the reference design has no relevance to the current contract, and IHSL are to comply with the Project Agreement and in particular the BCR's and PCP's. Any non-compliance with the BCR's or PCP's should be highlighted to the Board.

Regards  
Kamil

Janice

Please excuse the lack of aconex, I'm working off m phone on the train.

As discussed earlier, we'd like NHSL to consider the option of not issuing RDSs with production group issues.

NHSLs comments clearly indicate that you would rather the information is in place even when it is not contained on the RDS. Comments also referring to the environmental data were agreed (at last weeks MEP meeting) to be made on the matrix- this directly informs the RDSs. Finally, the equipment list is provided in multiple formats.

In summary, the RDD information is the collation of multiple info sources and it seems you will be more comfortable reviewing these when the other sources are signed off.

We can jointly review the best time to prepare the RDSs for meaningful review.

I trust that you will agree that it is a better approach to hold off the issue of RDSs for now, but await your confirmation.

We can discuss the timing of their issue and other issues pertaining the PG's next week - Project Co are issuing invitations for Monday or Weds morning (Weds would be preferable for us).

many thanks

LE

## Message

David / Ken / Colin,

The Board have serious concerns over the upgrading Environmental Matrix to Status B considering some of the issues raised (as per MM-GC-002084) being the same as the issues that had been raised since FC. There are also concerns over the potential inaccurate information being transferred to the Room Data Sheets being submitted through RDD.

However, as requested by Project Co, the Board has upgraded the Environmental Matrix to status B, noting the Board still does not believe the Environmental Matrix and resultant design complies with the Project Agreement. Project Co's failure to comply with the BCR's / PCP's (as per MM-GC-002084) the Board believes would result in a non-compliant Facility.

The Board would suggest that Project Co resolves the non-compliant and other issues as a matter of urgency, and requests that Project Co issues a strategy for resolution of these issues.

Regards

Kamil

**Subject:** Re: G1547 RDD Review Environmental Matrix

The Board have reviewed the Environmental Matrix and still has significant concerns on items that do not appear to comply with the BCR's.

The Board notes the following general comments:

1. The Board has highlighted cells in blue and red bubble on the hard copy which require PCo review.
2. The Environmental Matrix should be updated to reflect the Production Group drawings.
3. Currently the matrix doesn't reflect the clinical lights schedule submitted through Clinical Lights Specification and Clinical Lights Technical Submittal.
4. EM shall be updated to reflect all circulation areas as per SoA.
5. Some lux levels don't appear to align with LG2.
6. Some ventilation rates don't appear to comply with BCRs. The Board would like to point that is still awaiting response from PCo to the issues raised as per MM-RFI-000172 & MM-GC-002006 relating to ventilation rates.

Some specific comments as follows:

1. See example G-D1-015 in the table - confirm filtration to physical measurement rooms.
2. Areas off the circulation area / corridor, i.e. 1-D6-060 Resus Bay, indicates transfer air but not known from where. Same principles applies to all Bays and Receptions.
3. See example 1-D7-005 in the table - indicates area of 4m<sup>2</sup> however General Arrangement drawing shows 4.8m<sup>2</sup>. Please review this and all other similar instances.
4. See example 3-D9-009 in the table - indicates no cooling and no ventilation but filtration. Please review this and all other similar instances.
5. See example 3-D9-016 in the table - contradiction, please confirm for this and all other similar instances.
6. See example G-F1-037 in the table – only extract and filtration, please confirm for this and all other similar instances.
7. See example 1-H2-013 in the table – confirm temperature and cooling requirements for this and all other similar instances.

8. See example 1-L1-015 in the table – “via bedroom and en-suite” confirm extract rates for bedroom and en-suite.
9. All Dirty Utility rooms – please confirm dirty utility heating type and control.
10. Changing Cubicles – will be supplied with 18 deg C fresh air with no option to increase temperature. Please confirm.
11. Dictation Rooms - will be supplied with 18 deg C fresh air with no option to increase temperature. Please confirm.
12. 1-P1-067 (see table) – please confirm proposal.
13. 1-P1-090 and 1-P1-005 – should this not be other way round? Please confirm.

Whilst the Board has noted general and specific comments above, the Board reminds Project Co that unless the Board has already accepted a derogation, it is Project Co’s obligation to comply with the BCR’s / SHTMS etc, and the Board not commenting, does not remove that obligation on Project Co.

Regards  
Kamil

Attribute 2: 33. M&E Building Services

### ▼ MESSAGE

The Board have reviewed the Environmental Matrix and s ll has significant concerns on items that do not appear to comply with the BCR's.

The Board notes the following general comments:

1. The Board has highlighted cells in blue and red bubble on the hard copy which require PCo review.
2. The Environmental Matrix should be updated to reflect the Production Group drawings.
3. Currently the matrix doesn't reflect the clinical lights schedule submitted through Clinical Lights Specification and Clinical Lights Technical Submittal.
4. EM shall be updated to reflect all circulation areas as per SoA.
5. Some lux levels don't appear to align with LG2.
6. Some ventilation rates don't appear to comply with BCRs. The Board would like to point that it is s ll awaiting response from PCo to the issues raised as per MM-RFI-000172 & MM-GC-002006 relating to ventilation rates.

Some specific comments as follows:

1. See example G-D1-015 in the table - confirm filtration to physical measurement rooms.
2. Areas off the circulation area / corridor, i.e. 1-D6-060 Resus Bay, indicates transfer air but not known from where. Same principles applies to all Bays and Receptions.
3. See example 1-D7-005 in the table - indicates area of 4m2 however General Arrangement drawing shows 4.8m2. Please review this and all other similar instances.
4. See example 3-D9-009 in the table - indicates no cooling and no ventilation but filtration. Please review this and all other similar instances.
5. See example 3-D9-016 in the table - contradiction, please confirm for this and all other similar instances.

A47206723

6. See example G-F1-037 in the table – only extract and filtration, please confirm for this and all other similar instances.
7. See example 1-H2-013 in the table – confirm temperature and cooling requirements for this and all other similar instances.
8. See example 1-L1-015 in the table – “via bedroom and en-suite” confirm extract rates for bedroom and en-suite.
9. All Dirty Utility rooms – please confirm dirty utility heating type and control.
10. Changing Cubicles – will be supplied with 18 deg C fresh air with no option to increase temperature. Please confirm.
11. Dictation Rooms - will be supplied with 18 deg C fresh air with no option to increase temperature. Please confirm.
12. 1-P1-067 (see table) – please confirm proposal.
13. 1-P1-090 and 1-P1-005 – should this not be other way round? Please confirm.

Whilst the Board has noted general and specific comments above, the Board reminds Project Co that unless the Board has already accepted a derogation, it is Project Co's obligation to comply with the BCR's / SHTMS etc, and the Board not commenting, does not remove that obligation on Project Co.

Regards

Kamil

Status: N/A

### MESSAGE

Following the review of PCo's derogations (WW014 & 015) the Board cannot accept this proposal.

As per the BCRs, PCo are required to provide room heat recovery with balanced ventilation at specified air change rates. Based on PCo derogations, in order to achieve balanced pressure regime (in 4 bedded room 1-L1-100), the en-suite extract would have to be in order of 36ac/h. This is in excess of SHTM recommendation of 3ac/h. Also it means that heat recovery from this air cannot be achieved.

Can Project Co please confirm how compliance with SHTM in relation to air change rates, balanced ventilation and room heat recovery will be met.

A47206723

Regards  
Kamil

**Mail Number:** MPX-GC-012071  
**Subject:** Fwd: RHSC+DCN| Air Extract

Kamil

Reference discussions on Tuesday last, you intimated this derogation submitted nearly 4 months ago would not be accepted and you were going to confirm reasons for this.

Could you urgently confirm what the reasons are please?

Thanks

Ken

**Subject:** Re: RHSC+DCN| Air Extract

Hi Kelly

Copy of derogation request for review and discussion if you let us know best way to take this forward.

Thanks

Ken

**Subject:** RHSC+DCN| Air Extract

A47206723

Hi All,

The Board have noted the number of air changes within the en-suites is higher than that required under SHTM. The Board understand this is to provide adequate air changes for the volume of air within both the en suite and single room and there is not an extract fan within the bedroom. As the extract fan is in the en-suite and extracting 'dirty' air the Board understand that no heat recovery is possible. Can Project Co please confirm the above and if a Derogation needs to be submitted for the Boards approval.

Kind regards,  
Kelly

3.09.005	Resuscitation Trolley Bay	200
1.L1.0054	Resuscitation Bay	500
1.L1.074	Resuscitation Trolley Bay	200
2.L2.020	Resuscitation Trolley Bay	200

Rev B: The following table indicates Board Comments, initial response together with the Environmental Matrix to reflect the following Board comments

Item	Initial Response	Feedback	Reconciliation	
1	Update the Environmental Matrix shall be updated by Project Co to reflect all the rooms and room types in the proposed Facility, this should be based on an updated Schedule of Accommodation that has been commented on separately by the Board. This also needs to reflect the names and room numbers in the GSU table.	Individual room numbering being applied.	OK	Agreed
2	Include the requirements contained in the Clinical Output Specification including but not limited to the requirement that theatre temperatures are to be able to be raised to 31°C for certain operations.	We have made reference to the figure of 31°C in the Guidance Notes. Theatre temperatures are to be able to be raised to 31°C for certain operations.	Temperature control in theatres is covered in the Operational Design Notes V3 14th Oct2014 for NHS Theatres 1 & 2. Operating theatres 1-P1-032 and 1-P1-044 shall operate normally as detailed in the Environmental Matrix. These rooms shall be provided with a manual control to raise the temperature to 31°C within a period of 2 hours. This manual control function shall be logged in the BMS and the temperature requirements of the Environmental Matrix shall not apply for the duration of the elevated temperature operation. THIS HOWEVER IS NOT NOTED ANYWHERE.	This statement is now incorporated within the guidance notes of the matrix.
3	Measures shall be assessed, modelled and implemented to demonstrate that the internal air temperature of the following room types to reduce the temperature control from 20°C to 25°C: Treatment Rooms, Consulting Rooms, Laboratory, Physiotherapy Studio, Recovery.  These rooms shall not exceed the maximum acceptable level of 25°C for more than 50 hours per annum.	The Temp (max) column within the table has been updated to 25°C for the agreed rooms 3.1-3.5 above.	OK	Agreed
4	Detailed proposal awaited on bedroom ventilation to achieve balanced negative pressure relative to corridor.	The single bedrooms have had their ensuite extract increased to achieve a balance within the room, this has been noted within the matrix.	NOTE 26 AND VENTILATION TYPE HAVE NOT BEEN ALTERED.	Refer to Matrix.
5	Colour rendering all stated as 80 where certain areas should be 90	Amended.	NEEDS TO BE CHECKED FOR ALL.	Refer to Matrix.
6	There also need to have a consistent approach e.g. guidance notes and ED body view room stated as 25-8, bereavement suite body view room stated as 25-8	The figure of 25-8 is now reflected within the matrix.	OK	Matrix now amended. See item 7 below.
7	Further discussion is required on the minimum temperature requirements for the Body View Room.	Awaiting confirmation on the one from the client, however discussion at the meeting on the 11/11/14 was that rather than take the room temperature down to 8°C which would require specialist cooling they would look at providing a cold blanket for the body and room temperatures would be retained at a normal room.	NHSU confirm following discussion with users that the use of a cooling blanket or cooling cap for the body is appropriate and therefore there is no requirement to have the room at 8 degrees and 25°C is acceptable.	Matrix amended to minimum temperature of 18°C in place of 8°C.

NHSL Reference	NHSL Comment	Response	Environmental Matrix Status	Drawing Implication	FC Comment	Post FC Comment
1	Technical Submittal MER-XX-SL-TS-015 appears to contradict environmental note 13 by way of radiant panel controls.	Note 13 has been deleted from the matrix and Mercury's technical submittal takes precedent.	Now updated	X	X	✓
2	1-B1-010 medical gas cylinder store, SHM 02-01 states internal cylinders stores may require mechanical ventilation, please confirm no ventilation provided.	Extract ventilation has been provided. Matrix updated and drawings where appropriate.	Now updated.	✓	X	✓
3	IPS room maximum temperatures stated as "Manufacturer Dependent", this is not acceptable, temperatures to be stated. Room has 3ach mechanical extract therefore heating type should be Adjacent space transfer air and temperatures accordingly.	Room temperatures have been added, adjacent space transfer air added, heating type.	Now updated	X	X	✓
4A	Isolation cubicles and bedrooms are not shown with any extract ventilation.	Extract provided in new added.	Now updated	X	X	✓
4B	Gowning lobby, supply stated as "in line with SHPN 04" and extract stated as "To match total bedroom air volume", design development review required.	Note removed and extract rate added.	Now updated	X	X	✓
5	Technical Submittal MER-XX-SL-TS-015 shows room 1-B1-057 with a radiant panel which contradicts Environmental Matrix room 1-B1-057 warm air reheat battery.	The air is heated by a heater battery which is BMS controlled as per the matrix.	No action required	X	X	✓
6	Where ventilation rates 10ls per person are stated, room occupancy to be detailed and ventilation rates calculated.	These particular areas have been designed based on occupancies; occupancy figures and ventilation rates have been added to these areas to provide clarity.	Now updated	X	X	✓
7	1-B1-063 Stated as supply air 4ach, extract via en-suite, this room does not have en-suite facilities.	Room extract rate added.	Now updated	X	X	✓
8	1-B1-090 has an area of 6m2 which is not stated in the matrix, PCO to populate areas.	A review will be carried out and any blank GFA rates will be noted - Updated schedule of accommodation required for this item.	Now updated	X	X	✓
9	1-C1.1-008 review ventilation type, only showing supply when 4ach supply and extract.	Ventilation type now amended to interzonal extract.	Now updated	X	X	✓

NHSL Reference	NHSL Comment	Response	Environmental Matrix Status	Drawing Implication	FC Comment	Post FC Comment
10	Room 1-G3-003/005/007 bathroom temperatures stated as 26 / 20 with adjacent space transfer air from area with temperatures of 28 / 18	These bathrooms have their own radiant panel.	Now updated	X	X	✓
11	Similarly isolation bedroom 3-C1-4-040, temperatures stated as 23 / 21 with adjacent space transfer air from area with temperatures of 28 / 18, ventilation described as "balanced".	The adjacent area; Lobby 3-C1-4-039 is heated via heater battery and will be at least 21°C. Matrix has been updated.	Now updated	X	X	✓
12	3-C1-7-003; 004, 005 supply and extract "to suit location" not acceptable.	Air change rates will be noted and the "to suit location" will be removed.	Now updated	X	X	✓
13	0-D2-006 supply and extract "to suit location", statement "to suit location" is not acceptable.	Air change rates will be noted and the "to suit location" will be removed.	Now updated	X	X	✓
14	This is ventilation stated as "in line with SHTM 03-01", correct, this is a BCR requirement. However dental surgeries are not mentioned in SHTM 03-01, I would suggest SHPN 26 part 2. The required ventilation to be designed and detailed.	In line with the SHTM 03-01 removed and air change rates added.	Now updated	X	X	✓
15	1-N2-021 is currently labelled a single bedroom but it is an isolation room, review ventilation.	This room function was RF13 and has been designed as an isolation room (matrix has been updated).	Now updated	X	X	✓
16	1-P1-003 and 005 are bedrooms, not bedrooms.	Bathroom changed to bedroom.	Now updated	X	X	✓
17	Richen states DW172 dependant, actual design detail to be added.	Design details will be noted and 'DW172' will be removed.	Now updated	X	X	✓
18	Complete Estates SOA areas.	A review will be carried out and any blank GFA rates will be noted.	Now updated	X	X	✓
19	Room 0-32-002 and 001 stated in Environmental Matrix as Adjacent Space Transfer Air, however shown with radiant panel on drawing.	Matrix will be updated with radiant panel noted.	Now updated	X	X	✓

NHSL Reference	NHSL Comment	Response	Environmental Matrix Status	Drawing Implication	FC Comment	Post FC Comment
20	ADB code reference should be confirmed.	ADB code reference is an unnecessary column for the use of this matrix so the column will be deleted from the environmental matrix.	Now updated.	X	X	✓
21	Last column not filled. What does it refer to?	This column is the IET grouping but this column has now been superseded by the categorisation document. Column will be deleted from the environmental matrix.	Now updated.	X	X	✓
22	B-53-002 & B-54-001 can min temp be increased to 18?	Temperature will be altered to 18°C	Now updated.	X	X	✓
23	Disposal hold – can min temp be reduced to 16.	Sensor could be set to 16°C rather than 18°C but the reduction to the maximum temperature from 28°C to 25°C is problematic though so if required, cooling will be need to be added - Confirmed at meeting that 28°C is to be retained.	Now updated.	X	X	✓
24	During a recent PO it was made clear that due to the nature of the research being carried out in the Clinical Research Department in rooms H2-013, 014, 016 and 020 the temperature cannot at any time exceed 25°C.	Cooling has been provided in H2-014, H2-016 and H2-020. H2-013 requires cooling. Matrix has been updated to reflect this but drawing requires updating.	Environmental Matrix updated and drawing to be updated.	✓	X	✓
25	Further to the recent discussion regarding hepa filtration in the isolation rooms the matrix should have been updated to reflect this.	The matrix doesn't note HEPA filter requirements but all isolation rooms have the capability of HEPA filters being installed.	No action required	X	X	✓
26	G-F1 Bedrooms with 6ach where most bedrooms are taken as 4ach.	This is a CAHMS bedroom so 6 ACH has been utilised. reference to natural ventilation will be removed.	Now updated.	X	X	✓
27	B-54-204, no supply air.	Supply air reference will be added.	Now updated.	X	X	✓
28	G-56-016, Cooling - Yes, Cooling Type - none.	Comfort cooled fresh air is now noted.	Now updated.	X	X	✓
29	G-01-007, Cooling – No, Cooling Type - Comfort cooled fresh air.	Cooling note removed.	Now updated.	X	X	✓

30	G-Q1-161. Heating type - Adjacent space transfer air, supply at 10 fwh positive pressure. Diagnostic rooms, "To suit location"	This room is part of corridor and shares heating and ventilation with corridor.	No action required	X	X	✓
31	G-A1-004, supply 4 ach extract 3 ach positive, different to other diagnostic rooms.	We have treated this room like an office.	No action required	X	X	✓
32	Confirm where natural ventilation, i.e. 1-B1-063/055/067.	Extent of ventilation clarified on schedule.	Now updated	X	X	✓
33	3-C1.3-018, supply 4 ach extract 3 ach positive, different to other offices.	Air change rates utilised are in line with cellular offices.	No action required	X	X	✓
34	1-L1-005 Resus area 30m2 with extract at 3 ach.	This room has been updated on the matrix.	Now updated	X	X	✓
35	G-A1-028028, Resus area with central general extract with supply at 10 ach extract at 6 ach.	Ventilation type for these rooms has been updated in line with design.	Now updated	X	X	✓
36	Consider absence detection to all offices, meeting rooms and node rooms.	The lighting control has generally been described in the matrix as either presence or switched. If this is causing confusion the reference to presence could be renamed automatic. As a general note, automatic detection has been used in all suitable areas.	No action required	X	X	✓
37	1-Q3-002 Circulation Equipment Storage Bays, all others are presence detection.	Automatic controls added.	Now updated	X	X	✓
38	Disposal hold, LC2 recommends 200 lux.	100 lux will be changed to 200 lux.	Now updated	X	X	✓
39	IPS rooms, normal lux stated as nil.	200 lux will be added to the matrix.	Now updated	X	X	✓

NHSL Reference	NHSL Comment	Response	Environmental Matrix Status	Drawing Implication	FC Comment	Post FC Comment
40	G-F1-028, 030, 063, 045 and 1-L1-028 are described as offices but have local lux of 1000.	Local lux figures to be removed.	Non-compliant	X	X	✓
41	Anaesthetic rooms, LG2 recommends local lux 1000 and Ra 80.	Ra 80 has been noted in the environmental matrix and 1000 lux is for local lighting but 500 lux is for general, all as noted in the environmental matrix.	No action required	X	X	✓
42	Theatre exit bays (transfers), LG2 recommends normal lux 300 local lux not required and Ra 80.	500 lux will be dropped to 300 lux, Ra 90 will be reduced to Ra 80 and local lux will be removed.	Environmental Matrix updated and drawings will be updated	✓	X	✓
43	Preparation rooms and scrub up, LG2 does not require local lux 10,000 – 100,000, or Ra 90.	Ra 90 will be reduced to Ra 80 and local lux will be removed.	Environmental Matrix updated and drawings will be updated	✓	X	✓
44	Theatre utility rooms, LG2 recommends local lux 100 – 150 and does not require local lux 10,000 – 100,000, or Ra 90.	500 lux will be dropped to 150 lux, RA 90 will be reduced to Ra 80 and local lux will be removed.	Environmental Matrix updated and drawings will be updated	✓	X	✓
45	Recovery areas, LG2 does not require local lux 1000 but does recommend Ra90	RA 80 will be increased to Ra 90 and local lux will be removed.	Environmental Matrix updated and drawings will be updated	✓	X	✓
46	Nurse/boothdown bases not shown to have night lighting, confirm this achieved by dimming.	All night lighting is achieved by dimmable fittings.	No action required.	X	X	✓
47	Resus trolley bay 1-D1-009 to be as other trolley bays, Ra 80 and presence detection.	1-D1-009 will be updated to reflect other trolley bays.	To be updated	X	X	✓
48	Review colour rendering, e.g. theatre suite, prep, anaesthetic, scrub utility, exit bay all Ra 80. Review consult examination rooms to have the higher color rendering of Ra 90. All to be as CIBSE LG2.	RA 90 is currently shown in theatres, preparation rooms, scrub rooms, utility rooms and exit bay. Anaesthetic room will be changed to Ra90 from Ra80. We feel that the consultant room are general treatment rooms so should remain as Ra80, where Ra90 is required, it will be achieved via the examination luminaires.	Environmental Matrix updated and drawings will be updated	✓	X	✓
49	No absence detection or daylight control detailed included from drawings.	The lighting control has generally been described in the matrix as either presence or switched. If this is causing confusion the reference to presence could be renamed automatic. As a general note, automatic detection has been used in all suitable areas.	No action required.	X	X	✓

## Environmental Matrix - Guidance Notes

- 1 The workbook is prepared for the Financial Close Stage as an easier reference tool to replace ADB RDS M&E Sheets for the Environmental Criteria elements as described on these sheets.
- 2 The services matrices are produced from the Schedule of Accommodation Sheets.
- 3 The design of the HVAC systems to the theatres shall be in accordance with SHTM 03-01.
- 4 Where radiant panels are indicated in any room in these matrices, detailed design development may remove the need for these without detriment to environmental temperature. This design development is dependant on actual room layout - i.e. whether a room is located adjacent to an external wall, ground bearing floor, roof surface or is internal.
- 5 Ventilation air change rates and the use of natural ventilation in Patient Areas shall be reviewed throughout the detail design process to ensure a maximum internal temperature of 25°C (dry bulb) is not exceeded during normal occupancy. This criteria shall also apply to cellular and open plan office spaces.
- 6 Maximum internal temperatures listed relate to normal occupancy and Summer Design Conditions; External Summer Conditions for Cooling Plant Selection as per SHTM2025, Enthalpy 54kJ/kgda, 26deg Cdb, 19deg C wb. External Winter Conditions as per CIBSE Guide A Table A 2.2 for locality = -6°C for Heat Losses, and as SHTM 2025 for locality = -10°C for AHU Ventilation Plant design.
- 7 Examination lamp notes where listed are provisional. Detailed requirements (fixed, mobile, illumination) will be detailed on C sheets as agreed from signed off 1:50 RDS, which shall take precedence over this schedule.
- 8 All lighting levels are derived from CIBSE Lighting Guide LG2.
- 9 Colour rendering refers to CIBSE Lighting Design Guide and will be applied throughout.
  - \*80\* Normal
  - \*90\* Enhanced to provide close as possible match to natural light for clinical purposes
- 10 Thermostatic Mixing Devices - SHTM 04-01 Guidance shall be employed for specific TRV Type versus listed Area/Activity.
- 11 Standby Lighting to be Grade A throughout.
- 12 The internal temperature in naturally or mechanically ventilated rooms shall not exceed the maximum temperature as listed on these Environmental Matrices provided external summer design criteria is not exceeded.
- 13 Note Deleted
- 14 Local Control BMS Temperature Sensors for ducted reheat zones and chilled water castles for hotspots shall be provided with local range adjustment to +/- 2°C of BMS Set Point. BMS set point shall be adjustable via operator/user dialogue through formal FM
- 15 **Typical bedroom** - Design Criteria - SHTM 03-01 Clause 2.11 - internal temperatures in patient areas should not exceed 28°C db for more than 50 hrs per year. Appendix 1 SHTM 03-01 gives 16°C to 28°C float range. NHSL however require that the maximum internal design temperature should not exceed 25°C for more than 50 hrs per year.
 

**HPU bed areas** - Design Criteria - HBN 2/7 gives specific guidance as well as SHTM 04-01 - Appendix 1 for air change rates - 10achr supply, 18°C to 25°C control range ( Capability shall be provided but not at the summer and winter external ambient design extremes against the internal maximum and minimum range conditions ).

The department will be comfort cooled and controlled on a zonal basis.

Central AHU to be provided with blank section for future provision of humidification.

**Post theatre recovery areas** - Design Criteria - SHTM 03-01 - Appendix 1 for air change rates - 15achr S&E, 18°C to 25°C control range ( Capability shall be provided but not at the summer and winter external ambient design extremes against the maximum and minimum range conditions ).

**Critical Care areas** - Design Criteria - SHTM 03-01 - Appendix 1 for air change rates - 10achr Supply for isolation cubicles, 18°C to 25°C control range ( Capability shall be provided but not at the summer and winter external ambient design extremes against the maximum and minimum range conditions), NHSL may require specific rooms to have a control range up to 28°C.

Central AHU to be provided with blank section for future provision of humidification.
- 16 **Corridor** ventilation may be either mechanical or where the opportunity exists natural. To be determined during detailed design with due regard to clinical functionality.
- 17 **Single Room WC** - SHTM 03-01 Appendix 1 suggests 3achr extract air change rate only. We have applied 10achr extract rate to provide a more robust rate of extract.
- 18 **Diagnostic Rooms** - ( X Ray, CT Scanner, MRI Scanners, Gamma Camera ) air change rates listed at 8achr. Actual air change rate must be derived through room heat gain analysis and actual equipment guidance.
- 19 **Operating Theatre Laminar Flow/UCV Requirements** - Refer to Operational Policy Documents for specific theatres which require Laminar Flow/UCV canopy style ventilation solution.
 

Central AHU to be provided with blank section for future provision of humidification.

Operating Theatres 1-P1-032 and 1-P1-044 shall operate normally as detailed in the Environmental Matrix. These rooms shall be provided with a manual control to raise the temperature to 31°C within a period of 2 hours. This manual control function shall be logged on the BMS and the temperature requirements of the Environmental Matrix shall not apply for the duration of the elevated temperature operation.
- 20 **Small workshop Areas** - Local Extract Ventilation (LEV) unit requirement to be determined from room equipment schedules.
- 21 **Note that Isolation Suite ventilation solutions for this project shall follow HBN 4 Supplement 1 Section 4 Item 4.8 Guidance i.e.**

A common departmental AHU shall be employed to provide supply air ventilation ( and shall therefore employ duty & standby fans);

Isolation Rooms En Suite Extracts shall be provided with an independent Isolation Room inlet extract ventilation system.

Isolation Rooms En Suite Extracts shall be provided with either externally located 3 mtr high discharge stack in a safe location or with extract filters ( H14 ) within a safe change housing outside the building on the suction side of the fan.

Heating & Cooling the Isolation Suites shall be provided via the ventilation system.
- 22 **Retail Provision** - Service provisions listed are Infrastructure only for future fit-out by retailer. ( Fire detection shall be provided to assist completion).
- 23 **Comfort Cooled Fresh Air** - Where noted as such on the matrix, these are provided via departmental air handling plant via chilled water cooling coils.
- 24 **Body View Room** - A cooling blanket or cooling coil shall be used in this room.
- 25 All signature rooms (17no. off) will be treated as sealed rooms with Supply at 6achr and Extract to match to achieve a balanced pressure.
- 26 **Single Bedroom** - The design philosophy for ventilation is for a mixed mode operation where natural vent is encouraged which has benefits both physiological with users being party in control, and from an energy stand point where mechanical vent loading is partly reduced (2/3rds). This strategy results in zero pressure differential regime within the room where supply and extract is balanced. En suite dirty extract volume flow rate has been increased to achieve a balanced ventilation system.

## Message

The Board have reviewed the Environmental Matrix and still has significant concerns on items that do not appear to comply with the BCR's.

The Board notes the following general comments:

1. The Board has highlighted cells in blue and red bubble on the hard copy which require PCo review.
2. The Environmental Matrix should be updated to reflect the Production Group drawings.
3. Currently the matrix doesn't reflect the clinical lights schedule submitted through Clinical Lights Specification and Clinical Lights Technical Submittal.
4. EM shall be updated to reflect all circulation areas as per SoA.
5. Some lux levels don't appear to align with LG2.
6. Some ventilation rates don't appear to comply with BCRs. The Board would like to point that is still awaiting response from PCo to the issues raised as per MM-RFI-000172 & MM-GC-002006 relating to ventilation rates.

Some specific comments as follows:

1. See example G-D1-015 in the table - confirm filtration to physical measurement rooms.

2. Areas off the circulation area / corridor, i.e. 1-D6-060 Resus Bay, indicates transfer air but not known from where. Same principles applies to all Bays and Receptions.
3. See example 1-D7-005 in the table - indicates area of 4m<sup>2</sup> however General Arrangement drawing shows 4.8m<sup>2</sup>. Please review this and all other similar instances.
4. See example 3-D9-009 in the table - indicates no cooling and no ventilation but filtration. Please review this and all other similar instances.
5. See example 3-D9-016 in the table - contradiction, please confirm for this and all other similar instances.
6. See example G-F1-037 in the table – only extract and filtration, please confirm for this and all other similar instances.
7. See example 1-H2-013 in the table – confirm temperature and cooling requirements for this and all other similar instances.
8. See example 1-L1-015 in the table – “via bedroom and en-suite” confirm extract rates for bedroom and en-suite.
9. All Dirty Utility rooms – please confirm dirty utility heating type and control.
10. Changing Cubicles – will be supplied with 18 deg C fresh air with no option to increase temperature. Please confirm.
11. Dictation Rooms - will be supplied with 18 deg C fresh air with no option to increase temperature. Please confirm.
12. 1-P1-067 (see table) – please confirm proposal.
13. 1-P1-090 and 1-P1-005 – should this not be other way round? Please confirm.

Whilst the Board has noted general and specific comments above, the Board reminds Project Co that unless the Board has already accepted a derogation, it is Project Co’s obligation to comply with the BCR’s / SHTMS etc, and the Board not commenting, does not remove that obligation on Project Co.

Regards  
Kamil

**CONFIDENTIAL****Meeting:** Project Management Group Meeting**Location:** MacKinlay Room**Date and time:** 2<sup>nd</sup> of November 2016 at 10:00am**Subject:** Project Management**Meeting Chair:** David Martin**Attendees:**

Brian Currie	NHSL	(BC)
Jackie Sansbury	NHSL	(JS)
Janice Mackenzie	NHSL	(JM)
Stuart Davidson	NHSL	(SD)
Graeme Greer	Mott MacDonald	(GG)
Kamil Kolodziejczyk	Mott MacDonald	(KK)
Kelly Gordon	Mott MacDonald	(KG)
Wallace Weir	IHSL	(WW)
David Martin	IHSL	(DM)
Hayley Prowse	IHSL	(HP)
Darren Pike	MPX	(DP)
Stuart Jackson	MPX	(SJ)
Douglas McFall	MPX	(DMc)
Colin Grindlay	MPX	(CG)
Richard Hair	BYES	(RH)

**Apologies:**

Ronnie Henderson	NHSL	(RHe)
Sorrel Cosens	NHSL	(SC)
Paul Wandless	BYES	(PW)

**Distribution (over and above attendees):**

Graham Coupe	MPX	(GC)
Kelly Hopkinson	MPX	(KH)
David Campbell	MPX	(DC)
John Wales	MPX	(JW)
Andy Clapp	IHSL	(AC)
Juan Custodio	IHSL	(JC)
Richard Osborne	IHSL	(RO)

Number	Action	Owner	Date
<b>1.0 Matters Arising</b>			
1.1	1.1 Kelly Hopkinson updating RDD schedules (MEP & Architecture), ongoing. HLM RDS Release programme issued to the Board for	Board	16/11/16

Number	Action	Owner	Date
	info/comments.  DMc / KG to discuss and agree list of information required by the Board for room reviews.  CDS room data sheets issued to the Board.	DMc/KG  Board	04/11/16  16/11/16
1.2	1.2 The county sewer draft Deed of Servitude: SW queries returned and confirms the Deed covers new pipework within the project boundary. WW progressing drawing amendments with MPX. DMc to chase HLM for revised plans.	WW / DMc	09/11/16
1.3	1.3 Demarcation meeting to be held w/c 31/10/16. Ventilation query is outstanding.: Board to respond. Meeting to be scheduled to resolve issues.	JS/CG	09/11/16
1.4	1.4 Commissioning Plan: Revised programme issued. JS reviewing comments from CG/RH/DM and will issue an updated programme shortly.  Board met with LH and PM to review equipment changes on 14 <sup>th</sup> October. Further meeting to be arranged.	JS  LH/PM/JS	09/11/16  07/11/16
1.5	1.5 Review of Courtyards: MPX & Board met to discuss. Rod Shaw issued cost comments 01/11/16. Further meeting scheduled for 09/11/16.	MPX	09/11/16
1.6	1.6 Patient Environment: MPX expecting Boston feedback by 04/11/16 following recent meeting with Gingko. CG will issue updated matrix once prices received. Note: maintenance and lifecycle are a Board responsibility.	CG	10/11/16
1.7	1.7 Environmental Matrix: EM returned at status C. CG requested Board review and reissue as status B with comments.	KK	09/11/16
1.8	1.8 Fire Strategy Report: Risk Assessment submitted to building control. MPX waiting for comments back from them. Matrix to then be updated. DMc will chase.	DMc	Update 16/11/16
1.9	1.9 Pattresses for the Fire Extinguishers: The Board continue to respond with areas in conjunction with MPX. CG noted problems with drawing markups re: clarity/ambiguity. KK will arrange with Billy a time to relook at drawings. SJ to issue information required dates for the upcoming areas.	Board  SJ	07/11/16  04/11/16
1.10	1.10 MPX issued Draft Single Completion date Programme issued to IHSL. IHSL sent to Intercreditor Agent and TA; awaiting response. MPX will issue final response to IHSL by 09/11/16. BC noted that NHSL have requested a weekly update on progress on this key item.	MPX/IHSL  MPX/IHSL	09/11/16  Weekly

Number	Action	Owner	Date
1.11	1.11 Completion Criteria: DM met with JW 01/11/16 to review IHSL response to MM's query schedule. Initial meeting with Board/IHSL/MPX scheduled for 07/11/16. MPX will issue response to Board comments 03/11/16.	IHSL/MPX/ All  MPX	07/11/16 07/11/16  03/11/16
1.12	1.12 Ongoing Energy Document: SD will send comments by 04/11/16. Once the response is received BYES will determine if specialist consultants are required.	SD	04/11/16
1.13	1.13 Construction (temporary and permanent) details for the Link Connection. MPX received HLM internal connection details. Waiting on RBG information. DMc / SJ to issue interface details and RAMS. Board noted that the ideal start date for works would be February 2017 school holidays.	SJ/DMc	Update 16/11/16
1.14	1.14 Dewatering design information: MPX to respond to outstanding MM queries. SJ will arrange meeting with MM.	SJ/MM	08/11/16
1.15	1.15 Service Yard: Full suite of service drawings requested by the Board. RFI issued with expectation that drawings will be issued including comments. DMc will follow up.  BC requested drawing/s which include the details of the overlay the existing crib wall. Although this action is welcomed, agreement will be required with Consort. SJ currently reviewing boundary wall pack including internal turning circle area.	DMc  SJ	07/11/16  09/11/16
1.16	1.16 Public Realm/RIE building works: Board aiming to have 'access rights' agreed with Consort before Christmas. IHSL to draft SA1 as part of the change request. Street Lighting/ CCTV drawings to be appended to the SA6 agreement when agreed following the walk-around performed 19/10/16 and the review meeting on the 02/11/16  BC previously noted that U of E have requested a fully detailed specification of their works as designed. DMc will follow up and send to BC.  BC requested details and a schedule of the Street Furniture to be installed by MPX together with its value. U of E / Bio Quarter specification may be higher so Board to determine how to upgrade /enhance specifications.  External Signage: DMc queried site wide planning. BC noted North and South side of Bio quarter not being covered by MPX.	Board/ IHSL  MPX  DMc  MPX/Board	Update 16/11/16  09/11/16  09/11/16  Update 16/11/16
1.17	1.17 Plant Rooms:		

Number	Action	Owner	Date
	CG reissued Rentokil report to SD. SD reviewing.	SD	16/11/16
	GC to add substance to the Change request notification (IHSL 020).	GC	07/11/16
1.18	1.18 RDS's are currently in workflows. MPX will send two samples of room pack to Board /IHSL/BYES for review and discussion.	CG DMc	09/11/16 07/11/16
1.19	5.4 Removable Panels responsibilities: MPX to provide alternative details for link corridor access points and the IMRI first floor access panel (internal and external). MPX received drawings for panels. Set of drawings will be issued to the Board.	MPX	14/11/16
1.20	5.5 FF&E information received by MPX. Data sheets issued.	Board	Update 16/11/16
1.21	10.1 Red line CCTV and Lighting installation progressing. Walk round review carried out 19/10/16.	MPX / Board	Update 16/11/16
1.22	13.1 Reports of ETFE Roof failure at Victoria Station, Manchester: Board would like reassurance that any lessons from the incident are considered. MPX gathering information and will provide update.	IHSL/MPX	Update 16/11/16
1.23	13.2 Water storage capacity: MPX proceeding with 24 hours capacity. CG reviewing requirement for derogation.	CG	14/11/16
1.24	13.3 Lighting control for bedded areas in critical care: MPX waiting on feedback from Mercury, however, don't foresee issues.	CG	Update 16/11/16
<b>2.0 Programme Update</b>

**Subject:** FW: Environmental Matrix - Status B

Brian,

Further to last weeks PMG, and the discussion on upgrading the Environmental Matrix to status B, please refer to Colin Grindlay's email below re-requesting the Board upgrade the Environmental Matrix to status B.

Following a review of our previous comments that led to a status C, the caveats we have drafted on an upgraded status B may not sufficiently protect the Board. FYI I have pasted the previous comments below that led to the status C, as follows;

The Board notes the following general comments:

1. The Board has highlighted cells in blue and red bubble on the hard copy which require PCo review.
2. The Environmental Matrix should be updated to reflect the Production Group drawings.
3. Currently the matrix doesn't reflect the clinical lights schedule submitted through Clinical Lights Specification and Clinical Lights Technical Submittal.
4. EM shall be updated to reflect all circulation areas as per SoA.
5. Some lux levels don't appear to align with LG2.
6. Some ventilation rates don't appear to comply with BCRs. The Board would like to point that is still awaiting response from PCo to the issues raised as per MM-RFI-000172 & MM-GC-002006 relating to ventilation rates.

Some specific comments as follows:

1. See example G-D1-015 in the table - confirm filtration to physical measurement rooms.
2. Areas off the circulation area / corridor, i.e. 1-D6-060 Resus Bay, indicates transfer air but not known from where. Same principles applies to all Bays and Receptions.
3. See example 1-D7-005 in the table - indicates area of 4m2 however General Arrangement drawing shows 4.8m2. Please review this and all other similar instances.
4. See example 3-D9-009 in the table - indicates no cooling and no ventilation but filtration. Please review this and all other similar instances.
5. See example 3-D9-016 in the table - contradiction, please confirm for this and all other similar instances.
6. See example G-F1-037 in the table – only extract and filtration, please confirm for this and all other similar instances.
7. See example 1-H2-013 in the table – confirm temperature and cooling requirements for this and all other similar instances.

8. See example 1-L1-015 in the table – “via bedroom and en-suite” confirm extract rates for bedroom and en-suite.
9. All Dirty Utility rooms – please confirm dirty utility heating type and control.
10. Changing Cubicles – will be supplied with 18 deg C fresh air with no option to increase temperature. Please confirm.
11. Dictation Rooms - will be supplied with 18 deg C fresh air with no option to increase temperature. Please confirm.
12. 1-P1-067 (see table) – please confirm proposal.
13. 1-P1-090 and 1-P1-005 – should this not be other way round? Please confirm.

Whilst the Board has noted general and specific comments above, the Board reminds Project Co that unless the Board has already accepted a derogation, it is Project Co’s obligation to comply with the BCR’s / SHTMS etc, and the Board not commenting, does not remove that obligation on Project Co.

As you can see from the comments above, the comments are extensive hence we think the status C still applies, however as requested, we have drafted the following caveat for an upgraded status B;

“The Board have serious concerns over the upgrading Environmental Matrix to Status B considering some of the issues raised (as per MM-GC-002084) being the same as the issues that had been raised since FC. There are also concerns over the potential inaccurate information being transferred to the Room Data Sheets being submitted through RDD.

However, as requested by Project Co, the Board have upgraded the Environmental Matrix to status B, noting the Board still does not believe the Environmental Matrix and resultant design complies with the Project Agreement. Project Co’s failure to comply with the BCR’s / PCPs (as per MM-GC-002084), the Boar believes would result in a non-compliant Facility.

The Board would suggest that Project resolve the non-compliant issues as a matter of urgency, and requests that Project Co issues a strategy for resolution of these issues”.

Regards  
Kamil

**Subject:** RE: Demracation Reports  
**Importance:** High

Kamil,

The demarcations reports are a document design to specifically clarify and confirm the termination points of services between turnkey and ProjectCo.

The ACH per hour is a separate issue and have already advised I would not re-issue these documents until this is resolved.

There are various works within the report with are totally unaffected by the ventilation. By Status C this document you are directly delaying and stopping works onsite.

These document need to be a Status B to mitigate project risk (both NHS & Multiplex) and heavily caveated if required to conclude your ventilation position.

If is disappointing after all this work that these documents were going to be sent back as Status C based on the below.

**Subject:** RE: Demracation Reports

Still finalising with WW.

Happy for comment to remain as Status B.

We will then conclude and update document accordingly.

Just want to check one item which I don't think is covered in report. – MRI rooms are Turnkey buying their own FCU's or do you want us to free issue???

Personally, I think they should buy their own to our specification.

MESSAGE

Wallace

This is not a new issue by any means having been discussed at length many times in recent weeks and in relation to Point 1 below since well before FC.  
However, I feel compelled to write expressing our concern and alarm that ventilation ductwork is appearing on site which quite clearly does not reflect a compliant design. It is nobody's interest to allow this situation to continue.

**Point 1 Ventilation to single and 4 bedded rooms**

You are not providing heat recovery and your designed air changes rates in relation to extract through toilets are unacceptable.

**Point 2 Ventilation to Diagnostic + Interventional Radiology Rooms**

15 A/C Hour is required as verified by HPS.

**Point 3 Ventilation to Isolation Rooms**

A derogation is required.

Please confirm receipt of this communication and confirm by return that IHSL will be providing a fully compliant design.

Brian

## Message

David / Colin,

Thanks for your response, the Board has reviewed the information submitted and provided comments in blue below. Note we had to break up points submitted by PCo to comprehensively respond to all the comments.

There is clearly still a difference of opinion as to whether PCo has provided a compliant design, hence we would like to suggest a workshop on Monday 16 January at 10am to progress through the below points. Please confirm whether the proposed date is suitable for PCo's team.

Regards

Kamil

**Cc:** Wallace Weir, Graeme Greer, Ken Hall, Darren Pike, NHSL RHSC + DCN, David Martin  
**Mail Number:** MPX-GC-014140  
**Subject:** Re: RHSC+DCN| Air Extract

Kamil,

Following a joint review with Project Co. please see below our response to MM-GC-002006.

'We note your comments relate to both single bedrooms and 4 bedded rooms. We would confirm derogations WW014 and WW015 were prepared for single bedrooms only.

1.0 Reference to 4 bedded room comments made, taking Room 1-L1-100 as the example, you have noted the ensuite extract would have to be in order of 36ac/h. This statement is incorrect as the design solution for single bedrooms is fundamentally different to 4 bedded design.

Board response 090117 - In relation to your statement that the design solution for single bedrooms is fundamentally different to 4 bedded design, can you please confirm which guidance / specification details this? In accordance with SHFN 30 Infection Control, the pressure cascade for single/multibed areas shall be negative to corridor and positive to en-suite (if available). Please also refer to the attached diagram of Board's interpretation of the SHTM guidance and PCo proposed design (to be further discussed at the workshop).

It is clear within the environmental matrix the extract is not balanced to the bedroom supply ventilation. This is in compliance with Appendix 1: Table A1 of SHTM 03:01 "pressure" column.

Board response 090117 – the Board disagrees with the PCo's statement, it appears there is a positive pressure in the room in relation to the corridor which is not in compliance with Table A1 of the SHTM 03-01, however further discussion is required between the PCo and the Board.

We would reiterate the extract within the 4 bedded rooms ensuite is 10ac/h as detailed within the environmental matrix and not 36ac/h as you have noted.

Board response 090117 - The extract rate column in the environmental matrix states either "via en suite" or "minimum 10", which in both instances is not acceptable and the actual value should be provided throughout environmental matrix.

2.0 WW014 was prepared on the basis that the SHTM does not detail ventilation rates for ensuite, only WCs at 3ac/h. Reference to SHTM03-01 appendix 1: Table A1 refers to WC only. Given the ensuite contains both a shower and WC, 3ac/h was considered to be inadequate and this was documented on the original Wallace Whittle Environmental matrix guidance notes, note 17, copy attached.

Board response 090117 - In terms of the WC/en-suite, please note the following reference from SHTM 03-01 providing further guidance as to how this should be approached:

*"Toilets should have an extract ventilation rate as set out in the building regulations. Where WC's are located in shower and bathroom spaces, the ventilation required for the WC will normally be adequate for the whole space."*

The Board would like to note that the PCo report submitted and discussed at the meeting on 13.01.15 suggests that there is no dubiety in the interpretation of Table A1 Appendix 1 of the SHTM 03-01 in terms of single room and WC ventilation.

These notes were reviewed pre FC and no adverse comments were received. This was further clarified at the meeting of 13.01.15 as per BMCE-RFI-000077 dated 19.01.15.

Board response 090117 – the ventilation issue was first raised pre-FC (14 October 2014, MM-GC-000339, copy attached) highlighting the areas where the environmental matrix is non compliant in relation to ventilation which was further clarified as per the Board response on 29 January 2015 (MM-GC-000432) confirming that PCo design shall comply with SHTM guidance, as follows:

*“Hi Ken,*

*Following your recent RFI, the Board respond as follows:*

- The single room with en-suite ventilation design shall comply with the parameters set out in SHTM 03-01*
- The design solution should not rely in any way with the opening windows as these will be opened or closed by patient choice.*
- The critical factor from SHTM 03-01 for infection control will be the resultant pressure within the room being balanced with or negative to the corridor.*
- Isolation room ventilation shall comply with SHPN 04 Supplement 1.”*

Furthermore, the Board reviewed the environmental matrix several times before and after FC and made comments regarding the deemed non compliance of the ventilation design. The environmental matrix was rejected at FC on the basis that it did not comply with the SHTM’s. The Board also rejected all ventilation drawings submitted for FC, please refer to Section 5 of Schedule Part 6. PCo since has not provided design that would comply with the Board’s requirements.

On the basis the ensuite extract figures are not detailed within the SHTM we can if you wish withdraw the derogation as we do not consider this to be a compliance issue with the SHTM. The environmental matrix clearly details the minimum 10ac/h.

Board response 090117 – as detailed above, the Board believes the current Project Co design to be non-compliant.

3.0 WW015 for the bedroom supply ventilation reducing 6ac/h to 4ac/h was prepared on the basis of the pre FC report pulled together from the M+E workshops, and tabled at the meeting of 13.01.15. BMCE-RFI-000077 dated 19.01.15 refers. 4ac/h was captured within the environmental matrix, and drawing WW-SZ-SL-500-002 Rev 01 was prepared as part of the FC pack clearly showing “supply only” within the bedroom, and “extract” via the ensuite. PCP 4.9 section 4 makes reference to the bedroom drawing, copy of the drawing attached for ease of reference. Zonal design drawings then commenced post FC adopting this design strategy, tabled at both pre RDD and RDD reviews without rejection of the bedroom ventilation and ensuite design.

Board response 090117 – Please refer to Board’s response as per MM-GC-000432 (also copied above), referring to the compliance with SHTM requirements. The WW-SZ-SL-500-002 was rejected at FC however more specific ventilation comments were included on the specific ventilation drawings. Note this is not the Board’s obligation to ensure that PCo delivers a compliant design.

4.0 We note your comments that the BCRs state PCo are required to provide “room heat recovery” . We are unable to find this specific wording, could you please confirm where this is stated. We are aware of BCR clause 8.7.8 where it states “....shall be logically designed to operate efficiently incorporating heat recovery and ....”. For the avoidance of doubt we can confirm single bedroom heat recovery has been reassessed based on the output of the IES energy model for the single bedrooms. We can confirm compliance with SHTM 03-01 paragraph 4.142 on the basis it was uneconomic to provide this'.

Board response 090117 – The BCRs state “The heating, ventilation and air conditioning systems shall be logically designed to operate efficiently incorporating heat recovery and providing local control where required.”

For the avoidance of doubt the SHTM 4.143 also states “Energy recovery will normally be fitted to all healthcare ventilation systems. It may be omitted only where it would clearly be uneconomic. Where the economic case is marginal, space should be allowed for the retrofitting of an energy recovery system.”

Also the AHUs technical submittals issued to the Board through RDD indicate the provision of thermal wheels which in turn would suggest that the heat recovery is being provided.

Furthermore the paragraph 2.3.2 of the 4.10 Energy PCP suggest the minimum 60% of heat recovery will be provided to mechanical ventilation units.

PCo also hasn't submitted any derogation to the Board to deviate from BCR/SHTM requirements and therefore the design as it stands is non-compliant.

**To:** Ken Hall  
**Cc:** Graeme Greer, Colin Grindlay, NHSL RHSC + DCN, David Martin  
**Mail Number:** MM-GC-002006  
**Subject:** Re: RHSC+DCN| Air Extract

Following the review of PCo's derogations (WW014 & 015) the Board cannot accept this proposal.

As per the BCRs, PCo are required to provide room heat recovery with balanced ventilation at specified air change rates. Based on PCo derogations, in order to achieve balanced pressure regime (in 4 bedded room 1-L1-100), the en-suite extract would have to be in order of 36ac/h. This is in excess of SHTM recommendation of 3ac/h. Also it means that heat recovery from this air cannot be achieved.

Can Project Co please confirm how compliance with SHTM in relation to air change rates, balanced ventilation and room heat recovery will be met.

Regards  
Kamil

Kamil

Reference discussions on Tuesday last, you intimated this derogation submitted nearly 4 months ago would not be accepted and you were going to confirm reasons for this.

Could you urgently confirm what the reasons are please?

Thanks

Ken

**Sent:** 19/05/2016 2:41:36 PM BST (GMT +01:00)  
**To:** Colin Grindlay, Darren Pike, David Martin  
**Cc:** Graeme Greer, Kamil Kolodziejczyk, Colin MacRae, Brian Currie, NHSL RHSC + DCN  
**Mail Number:** MM-RFI-000133  
**Subject:** RHSC+DCN| Air Extract

Hi All,

The Board have noted the number of air changes within the en-suites is higher than that required under SHTM. The Board understand this is to provide adequate air changes for the volume of air within both the en suite and single room and there is not an extract fan within the bedroom. As the extract fan is in the en-suite and extracting 'dirty' air the Board understand that no heat recovery is possible. Can Project Co please confirm the above and if a Derogation needs to be submitted for the Boards approval.

Kind regards,  
Kelly

**Environmental Matrix Comments - 13 October 14**

The Board has the following initial technical comments on the draft 1 of the Environmental Matrix;

1. The submitted Environmental Matrix does not reflect the current Schedule of Accommodation, e.g. theatres and DCN acute care changes are not included. IHS to provide up to date Environmental Matrix.
2. Issues within the guidance notes relating to:
  - a. Environmental Matrix still dated as version 13 issued 19th September 2012,
  - b. Humidification, the requirement is for the space for future installation,
  - c. HK Design reference to be removed.
3. The detail contained in the Clinical Output Specification requires theatre temperatures to be able to be raised to 31°C for certain operations. IHS to reflect this in the Environmental Matrix.
4. Body view rooms to be able to reduce temperature for body storage. IHS to reflect this in the Environmental Matrix.
5. Room descriptions are given but no room numbers shown – IHS to add room numbers.
6. SHTM 03-01 clause 2.11 states;

“Internal temperatures in patient areas should not exceed 28°C db for more than 50 hrs per year”, however the Board added an additional BCR clause regarding the 25°C as clarified below:

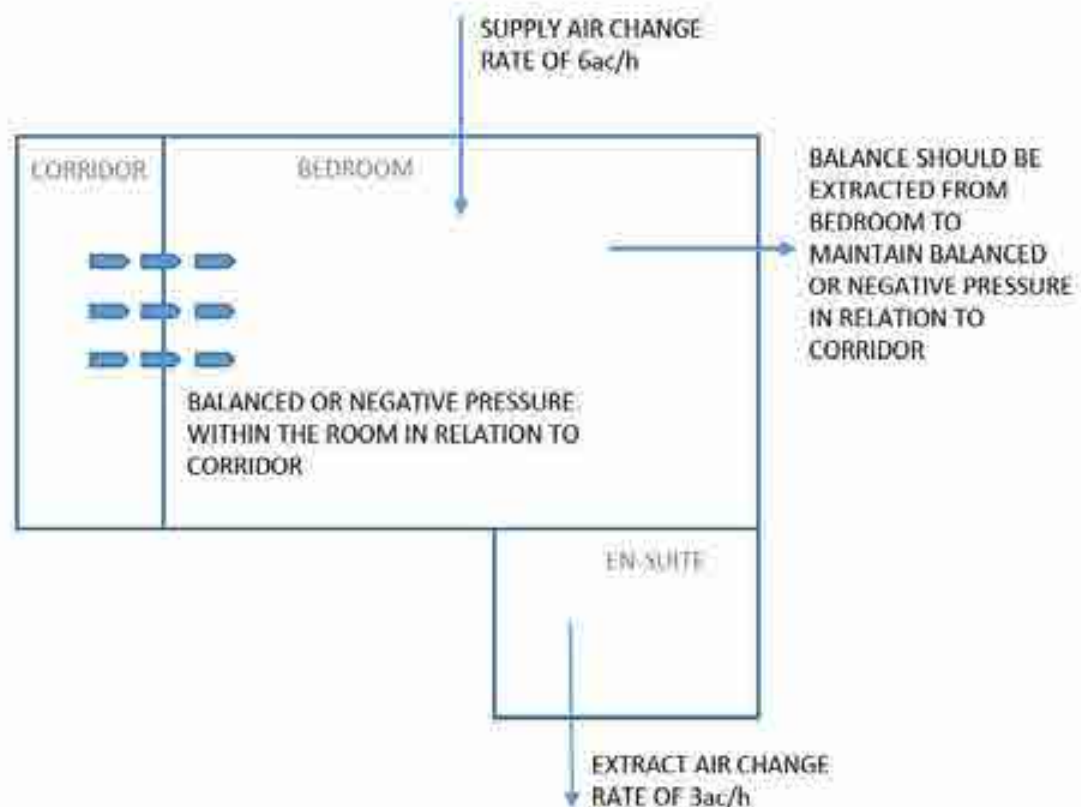

“Measures shall be assessed, modelled and implemented to demonstrate that the internal air temperature of any room or area does not exceed the maximum acceptable level of 25°C for more than 50 hours per annum”.

Further review and development of the Environmental Matrix is required to clarify the following;

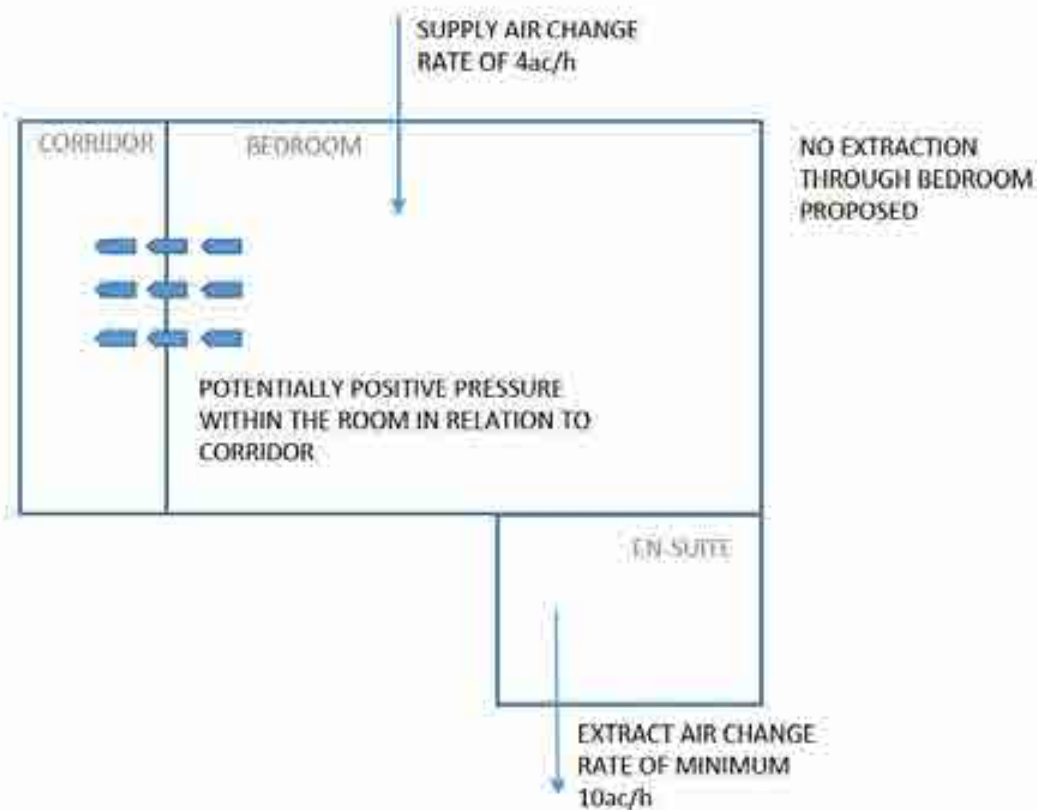

- a. There are some rooms at 28°C which are provided with comfort cooling.
  - b. There are areas / rooms in the Environmental Matrix that contradict the above BCR clause, hence once IHS produce an updated Environmental Matrix, further discussion is required with the Board to confirm which rooms or areas are not going to meet the Clause.
7. Bedrooms 4ac/hr, SHTM says 6 ac/hr  
Bedrooms have no extract  
Bedroom en-suites 10 ac/hr, SHTM says 3 ac/hr  
Bedrooms stated as positive pressure, SHTM says 0 or –ve pressure  
The supply air to a bedroom has to be balanced with extract  
e.g. Bedroom area 19m<sup>2</sup> and 2.4m high = volume 45.6m<sup>3</sup> x 6ac/hr = 273.6 m<sup>3</sup> / hr  
En-suite area 5 m<sup>2</sup> and 2.4m high = volume 12.0m<sup>3</sup> x 3ac/hr = 36 m<sup>3</sup> / hr  
To achieve balanced pressure within room bedroom extract required = 273.6 – 36 = 237.6 m<sup>3</sup> / hr
8. Recovery stated as 4 ac/hr, SHTM says supply and extract 15 ac/hr

9. Query DSR at 10 ac/hr, this seems high for a predominantly empty room – IHSL to confirm if this correct?
10. Query disposal hold extract 10 ac/hr, this seems high – IHSL to confirm if this correct?
11. Public telephone booth area of 2m<sup>2</sup> fitted with a radiant panel – IHSL to confirm if this correct?
12. Colour rendering all stated as 80 where certain areas should be 90.

All,

Further to our Ventilation workshop on Monday, please find enclosed a copy of our Multi Bed Rooms - Ventilation Amendment Proposal to Achieve Room Balance, Proposed Solution To Rooms Identified As Being Of Concern.

As agreed we have also enclosed a set of A3 general arrangement layout drawings to be used as key plans, over marked to show specific room locations.

Regards,

Brian

## Multi Bed Rooms – Ventilation Amendment Proposal to Achieve Room Balance

Wallace Whittle

### Proposed Solution To Rooms Identified As Being Of Concern

Room Reference Location	Ventilation Layout Drawing Number	Room Number	Room Name	Proposed Solution
A	WW-Z4-00-PL-524-001I	G-A2-054	4 Bed Room	Reduce supply ventilation down to 2.7ac/hr, increase dirty extract for en-suite and WC from 10ac/hr to 17ac/hr, branch ductwork and grilles to be increased in size. This will achieve a balanced room pressure. Branch ducts have long runs across the width of the floor plate to get back to the main duct.
B	WW-Z4-00-PL-524-001I	G-A2-046	4 Bed Room	Reduce supply ventilation down to 2.7ac/hr, increase dirty extract for en-suite and WC from 10ac/hr to 17ac/hr, branch ductwork and grilles to be increased in size. This will achieve a balanced room pressure. Branch ducts have long runs across the width of the floor plate to get back to the main duct.
C	WW-Z4-00-PL-524-002G	G-A2-028	4 Bed Room	Reduce supply ventilation down to 2.7ac/hr, increase dirty extract for en-suite and WC from 10ac/hr to 17ac/hr, branch ductwork and grilles to be increased in size. This will achieve a balanced room pressure. Branch ducts have long runs back to the main duct within the corridor.
D	WW-Z4-01-PL-524-001H	1-B1-063	Open Plan Bay (4 beds)	Reduce supply ventilation down to 3ac/hr, introduce a general extract ductwork branch and grille and connect into the duct main branch. This will achieve a balanced room pressure. The branch duct will require to be increased in size and has a long run back to the main.
E	WW-Z4-01-PL-524-001H	1-B1-031	Open Plan Bay (4 beds)	Reduce supply ventilation down to 3ac/hr, introduce a general extract ductwork branch and grille and connect into the duct branch. This will achieve a balanced room pressure. The branch duct will require to be increased in size and has a long run back to the main.

**Attachments:** ADB\_Multi Bed Room \_4 Beds.pdf

Hi Brian,

Further to the below email relating to multi bedroom ventilation, we drafted the following response to David Martin. Can you please review and confirm I can respond back to PCo?

"David,

As previously described under MM-GC-002408, the Board does not believe these updates to the environmental conditions constitutes a Board Change. Without these updates, PCo's design was not compliant with BCRs and relevant guidance, and also from a patient safety perspective, was not acceptable to the Board.

In relation to point 1 & 2 below, as per Schedule Part 8 (Review Procedure) of the Project Agreement, please note that the RDD review doesn't remove PCo's obligation under the Project Agreement, and the Board did not receive a derogation/change from PCo for an alternative design.

In terms of point 3, the WW design report states that current ventilation design for single room and general ward areas are fully compliant with SHTM 03-01, please note however that this is incorrect. PCo proposed air change rates do not align (as stated in the report) with SHTM recommendations hence, without PCo change, the design as it stands is not compliant. The Board expects to receive PCo's Change for deviation of air change rates as recommended per SHTM 03-01.

Additionally, the Board notes that PCo used wrong design criteria for the multi bed rooms. As explained by the Board at the meeting on Monday 23 January, a "ward" constitutes the total bed complement of a designated area. Multi-bed rooms are much smaller sections within a ward that allow patients to be nursed as a small group. Within Children's Services these areas are important for the purposes of clinical safety as they allow cohorting of patients who require enhanced level of nursing observation/support either because they have the same type of infection, or are at similar stages of acute post operative recovery. Additionally, these rooms aid the normal socialisation and development of young children. Similarly, within DCN multi-bed rooms within the ward are used to cohort patients requiring enhanced levels of nursing/monitoring that is more difficult to achieve within single room environment.

Please note that Table A1 is a summary extract from the Activity Database (ADB) and as stated in the SHTM, PCo should refer to the full ADB Sheets for further details relating to multibed rooms. Please find attached, for your information, the design criteria for multibed areas."

Regards  
Kamil

**Subject:** Bedroom Ventilation

---

Kelly

Please find attached the updated ventilation drawings and associated narrative which accommodates the Boards request to have the 4 bedded ward at a negative or balanced pressure.

Our opinion is that this amendment to the environmental conditions and operation of these rooms constitutes a change for the reasons noted below.

1.0 Environmental matrix was signed off as status B with the noted design parameters that the current ventilation design represents - as per MM-GC-001398.

2.0 Full RDD ventilation zonal design pack and workshops have been through RDD and signed off.

3.0 Copy of WW design document outlining compliance with the SHTMs is attached.

We anticipate that the costs of this Change will be in the Medium Value category.

We look forward to the Board's, positive response to this request.

Kind Regards

David

David Martin

## Executive summary

To date a number of issues have been found within Project Co's design / construction proposals and on site works. In many instances, Project Co have amended the design to align with the requirements set out in Project Agreement, however, there are still few items that require to be resolved prior to the Anticipated Actual Completion Date. The outstanding design issues, and corresponding categorisation are:

1. Resilience of the HV cable distribution which is classed as a non-compliance issue;
2. Bedroom ventilation which is classed as Change liability issue; and
3. MRI / IOMRI room design which is classed as non-compliance issue.

# 1 Key Parts of the Project Agreement and Board Construction Requirements (BCR)

Before describing the main issues the following highlights the relevant clauses included in both Project Agreement and BCRs:

## 1.1 Project Agreement (front end)

*"12 THE DESIGN CONSTRUCTION AND COMMISSIONING PROCESS*

*Overall Responsibility:*

*12.1 Project Co shall carry out the Works:*

*12.1.1 so as to procure satisfaction of the Board's Construction Requirements;*

*12.1.2 in accordance with Project Co's Proposals; and*

*12.1.3 in accordance with the terms of this Agreement.*

*12.2 To avoid doubt, the obligations in Clauses 12.1.1, 12.1.2 and 12.1.3 are independent obligations. In particular:*

*12.2.1 the fact that Project Co has complied with Project Co's Proposals shall not be a defence to an allegation that Project Co has not satisfied the Board's Construction Requirements; and*

*12.2.2 the fact that Project Co has satisfied the Board's Construction Requirements shall not be a defence to an allegation that Project Co has failed to comply with Project Co's Proposals."*

## 1.2 Project Agreement, Schedule Part 8 (Review Procedure)

*"4 Effect of Review*

*4.5 The return or deemed return of any Submitted Item endorsed "no comment" (or in the case of Reviewable Design Data endorsed "Level A - no comment" or otherwise endorsed in accordance with paragraphs 4.3.1 or 4.3.2) shall mean that the relevant Submitted Item may be used or implemented for the purposes for which it is intended but, save to the extent expressly stated in this Agreement including, without limitation, as specified in Appendix 1 Table A to this Schedule Part 8 (Review Procedure), such return or deemed return of any Submitted Item shall not otherwise relieve Project Co of its obligations under this Agreement nor is it an acknowledgement by the Board that Project Co has complied with such obligations."*

### 1.3 Project Agreement, Schedule Part 6 (Construction Matters), Section 3 (Board's Construction Requirements), Sub-Section A-C

#### "2 Project Wide Requirements

*Project Co shall ensure that the design of the Facilities draws upon and endeavours to further develop, improve and exceed current best practice (and Good Industry Practice) standards achieved in other similar schemes, and meets the requirements of the prospective patient groups, staff and the public. This philosophy of design and sustainability shall be extended across all parts of the Facilities including landscaped and external areas as well as the essential patient areas and these endeavours should extend to benefit the wider population of the community."*

#### "2.3 NHS Requirements

*In addition to the standards listed in paragraph 2.4 of this Sub-Section C of the Board's Construction Requirements, unless the Board has expressed elsewhere in the Board's Construction Requirements, a specific and different requirement, the Facilities shall comply with but not be limited to the provisions of the NHS Requirements as the same may be amended from time to time:*

- a) The themes, issues and recommendations in "Better by Design: Pursuit of Excellence in Healthcare Buildings" by the Department of Health;*
- b) New Policy on Design Quality for NHS Scotland published by SGHSCD;*
- c) Firecode;*
- d) HAI SCRIBE;*
- e) HBN;*
- f) HFN and SHFN;*
- g) HGN and SHGN;*
- h) HTM and SHTM;*
- i) SHTN;*
- j) SFPN;*
- k) HDL;*
- l) SHPN;*
- m) NHS publication 'Performance requirements for building elements used in healthcare facilities';*
- n) NHS Scotland & NHS Policies;*
- o) Board Policies as scheduled and available in the Disclosed Data as such schedule and Board Policies may be amended from time to time;*
- p) Health Department Letters (or Management Executive Letters) as appropriate published by SEHD and SGHSCD;*
- q) Safety Action Notices published by NHS Scotland;*
- r) Healthcare Improvement Scotland (HIS);*
- s) NHS Model Engineering Specifications;*
- t) Department of Health publication "Better by Design";*
- u) Corporate Greencode;*
- v) NHS Scotland Fire Safety Management, incorporating NHS Scotland Firecode;*
- w) Hazard Notices issued by NHS Scotland; and*
- x) HSC 1999/123;."*

#### "2.5 Hierarchy of Standards

*Where contradictory standards / advice are apparent within the terms of the Board's Construction Requirements and the Appendices then subject to the foregoing paragraph then*

*(1) the most onerous standard / advice shall take precedence and (2) the most recent standard / advice shall take precedence. When the more onerous requirement is to be used the Board will have the right to decide what constitutes the more onerous requirement.*

*Where there is a conflict of interest resulting from the use of the standards / advice Project Co shall involve the Board in the decision making process. The Board shall be entitled to make the final decision regarding the standards / advice to be used for the Facilities including any contradictions that may arise between items (1) and (2) above.”*

*“2.7 Derogations Register*

*Project Co shall comply with Section 3 (Boards Construction Requirements) of Schedule Part 6 (Construction Matters), subject to the agreed derogations as set out in sub-section 32(Derogations Register) of Section 4 (Project Co’s Proposals) of Schedule Part 6 (Construction Matters).”*

## 2 Key Design Issues

### 2.1 Resilience of the HV cable distribution

#### 2.1.1 Introduction

The Board believes Project Co's design for HV Distribution is non-compliant with Project Co Proposal's (PCP) and SHTM Guidance in relations to system resilience. The design currently creates a single point of failure at the HV side of the electrical distribution network. The Board believes that the Sub Station 2A (SS2A) and Sub Station 2B (SS2B) should not be treated as discreet substations as they are not separated by 4h fire rated wall, they share common ventilation system and are bus coupled. The loss of power to SS2A/SS2B may result in loss of power to whole of the Facility – single point of failure.

#### 2.1.2 Compliance clauses

The Board believes that Project Co has not demonstrated compliance with the following PCPs and SHTMs clauses noted below:

- **PCP 2.55:**

*“The principle adopted is that the first single point of failure is as close as possible to the point of use. Thus the possibility that the failure of a single component will cause a major power outage has been removed”*

- **SHTM 06-01 section 4.5:**

*“The design process should ensure that single points of failure are minimised by providing the appropriate level of resilience at the point of use. Risk management carefully balances the approach to a design strategy with the cost/benefit relationships, where cost represents investment, business continuity and operational risk.”*

- **SHTM 06-01 section 7.30:**

*“Where the HV substation is part of a ring network, consideration may be given to having the two network incomers in two rooms separated by a four-hour fire-rated partition wall, the two sections being linked by a fully rated cable.”*

Additionally, Project Co has also failed to provide and /or demonstrate a full cause and effect model as per the below extracts:

- **PCP 2.52:**

*“A full cause and effect model shall be developed to indicate power resilience and sequential power reinstatement in the event of various failure scenarios.”*

And has not complied with the following guidance from SHTM 06-01

- **SHTM 06-01 Section 4.4:**

*“A complete risk assessment for a sustainable electrical supply is a key duty of care owed to patients, staff and visitors.”*

- **SHTM 06-01 Note 3:**

*“An inappropriate level of resilience or response to a failure may compromise patient safety.”*

Further evidence in support of this view was given by NHSL, at the meeting on Thursday 11 May 2017 between NHS Lothian (including NHSL Fire Officer and NHSL Advisers) and Multiplex Construction Europe, in the form of the expected Scottish Fire and Rescue Service (SFRS) response to such an incident. Described as follows:

Due to no fire stopping installed for the busbar and a common ventilation and fire alarm system, the space should be treated as a single room in the event of a fire. Therefore, should SFRS need to fight a fire in HV Substation 2 they would need to isolate Ring Main Units RMU2A and RMU2B. It should be noted that this not only isolates the normal mains supply but it also isolates the emergency supply from the standby generators.

### 2.1.3 Summary

In the Board's opinion, Project Co has failed to provide sufficient evidence that they have satisfied the above clauses. The full cause and effect document (Generator Load Step Controls, ref WW-SZ-SL-SH-531-202 rev 02) was submitted to the Board, however, the Board does not believe the document fully addresses the risk of fire or major incident that could cause a power down to both Ring Main Unit RMU2A & RMU2B. The Board would like to emphasise their concern that they consider it reasonable and foreseeable that a fault, fire, or major incident could cause or require power down to both RMU2A & RMU2B.

Project Co's argument relies on the basis of supplies being fed from different sides of the open ring, however SS2A and SS2B are not fed from different sides of the open ring and they are both fed from the energy centre switchboard.

### 2.1.4 Additional HV issues

Further to the issue outlined above, the following clauses from SHTM 06-01 indicate compliance issues with the current as installed arrangements in the substation, although they are not directly related to the HV distribution:

- Clause 7.24 "HV substations should not be used for any purpose other than HV equipment and cables. The room should not be used for the storage of other items at any time. The room should not be used as a conduit for other engineering services, including drainage." The current design includes a common ventilation system which
- Clause 7.31 "Internal HV substations should have natural ventilation to prevent moisture and condensation...Transformers typically radiate between 1.5% and 2% of their rating as heat, which should be removed by crossflow (low to high opposite sides) natural ventilation...The supply and extract air for an HV substation should connect directly to an external wall and should be arranged to prevent short-circuiting." – No natural cross flow ventilation is provided in the switch room the HV substations are house in.

## 2.2 Ventilation in single and multi bed rooms

### 2.2.1 Introduction

The Board believes Project Co's design for ventilation within both single and multi-bed rooms is non-compliant with SHTM guidance and the ADB database requirements with regards to both air change rates and the pressure regimes. The Board's reasoning for this is detailed below.

## 2.2.2 Compliance Clauses

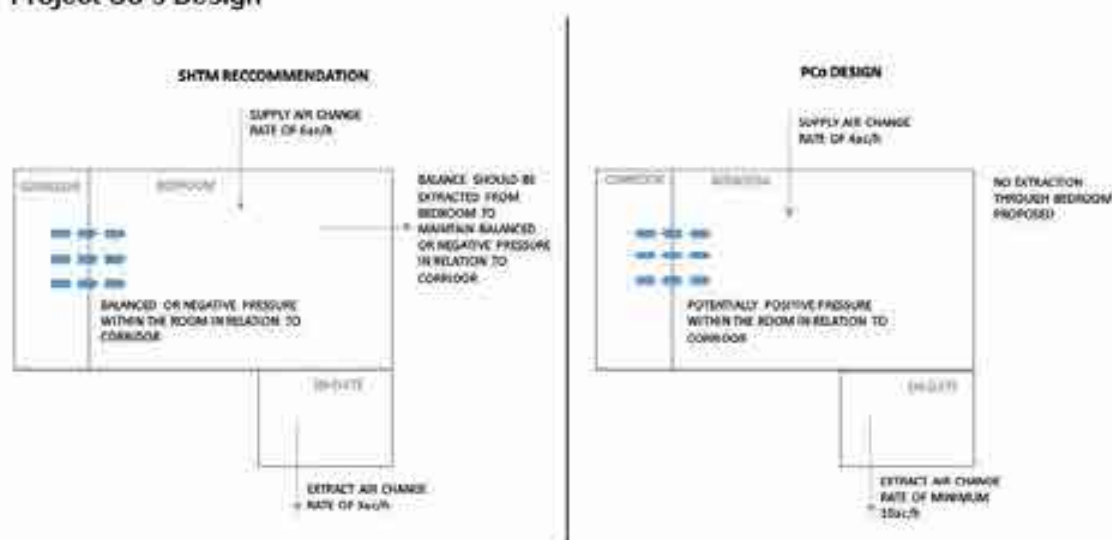

### 2.2.2.1 Single Bedrooms with ensuite

Appendix 1 of SHTM 03-01 (Please refer to Appendix C) recommends a single room requires balanced or negative pressure with 6ac/h within the single room and 3ac/h within the single room WC. Project Co's proposed air change rate is 4ac/h with an extraction through the ensuite at 10ac/h.

Therefore, Project Co's design does not align with SHTM guidance.

The Board has produced the following schematic to illustrate the principles for supply and extract ventilation as recommended in SHTM 03-01 and as per Project Co's Design.

Figure 1: Supply and extract ventilation as recommended in SHTM 03-01 and as per Project Co's Design

### 2.2.2.2 Multi-bed rooms with ensuite

Appendix 1 of SHTM 03-01 does not provide specific guidance on the design for a multi-bed room. Project Co's stated design intent is based on the criteria for a 'General Ward'.

As explained by the Board at the meeting on 23 January 2017, a "ward" constitutes the total bed complement of a designated area. Multi-bed rooms are much smaller sections within a ward that allow patients to be nursed as a small group. Within Children's Services these areas are important for the purposes of clinical safety as they allow cohorting of patients who require enhanced level of nursing observation/support either because they have the same type of infection, or are at similar stages of acute post operative recovery. Additionally, these rooms aid the normal socialisation and development of young children. Similarly, within DCN multi-bed rooms within the ward are used to cohort patients requiring enhanced levels of nursing/monitoring that is more difficult to achieve within single room environment.

Therefore, the design criteria used by Project Co for multibed areas is incorrect. Table A1 of SHTM 03-01 is an extract of the data included in the ADB Sheets (Please refer to Appendix D). The Board believe Project Co should have referred the ADB database for details relating to multi-bed rooms.

Project Co has designed the multi-bed rooms to supply 4 ac/h with an extraction within the ensuite of 10ac/h thus resulting in a positive pressure regime. The ADB sheet for a multi-bed room (4 beds) states a minimum air change of 6ac/h and a balanced or negative pressure. Therefore, Project Co's design does not comply with the requirements recorded within the Activity Database.

### 2.2.3 Summary

The fundamental concern to the Board is that in continuing with Project Co's proposed non-compliant design there is a risk of the spread of bacterial airborne infections into corridors and surrounding patient rooms.

The ventilation design was amended by Project Co, and although it still doesn't reflect the requirements of BCRs and SHTMs, it provides an operational solution. Despite the evidence provided above, Project Co is of the opinion that the changes to the ventilation design constitute a Board's Change. The Board does not believe the updates to the environmental conditions constitutes a Board Change. Without these updates, Project Co's design is not compliant with BCRs and relevant guidance, therefore, any costs associated with re-design are Project Co's responsibility. Furthermore, Project Co should submit a Project Co Change for deviation from relevant guidance.

## 2.3 MRI / IOMRI design

### 2.3.1 Introduction

The Board does not believe Project Co's design of the MRI and IOMRI (G-Q1-134 and 1-P1-064 respectively) provides a suitable environment for the MRI equipment. Following the appointment of the equipment specialist for the MRI and IOMRI rooms, the Board has been advised by the equipment specialist that the current design for these rooms does not contain the 0.5mT gauss lines for the equipment procured by the Board. Therefore, Project Co's design has not taken full account of the requirements as detailed below and the "worst case" equipment details provided by the Board prior to FC for Project Co to incorporate into the design (refer to Appendix E).

### 2.3.2 Compliance Clauses

The Board believes Project Co are non-compliant with the following clauses:

- **BCR 3.6.2 Equipment Requirements:**

*“Project Co shall provide a suitable environment for each item of equipment; this shall take into account lighting, temperature and ventilation requirements. Project Co shall design the Facilities to allow for the provision and safe use of the Group 1, Group 2A, Group 2B and Group 3 Equipment.”*

*“Irrespective of the party responsible for the supply, installation, maintenance and replacement of each item of equipment (as detailed in Appendix 1 (Equipment Schedule) of Schedule Part 11 (Equipment) of the Project Agreement), Project Co shall provide Facilities that satisfy the following criteria:*

*Allow equipment and associated systems to be installed, commissioned, operated, maintained and replaced in accordance with;*

- a) Good Industry Practice;*
- b) Manufacturer’s instructions;*
- c) The Board’s specific supplementary requirements; and*
- d) The Board’s, and statutory health and safety requirements;*

*In order to:*

- a) Allow equipment and associated systems to operate efficiently, effectively and in accordance with their intended function for the whole of its design life;*
- b) Take due account of the impact on the environmental conditions within the Facilities. For the avoidance of doubt, this obligation includes (but is not limited to) impact of heat gain and loss, and ventilation; and*
- c) Take due account of the potential impact of future equipment changes through either updating or replacement. In particular, allowance for equipment of different sizes, weights, service requirements or environmental impacts.*
- d) Allow the Board to provide their Clinical Services and Non Clinical Services with a minimum of disruption during installation, commissioning, operation, maintenance and replacement.”*

- **Sub Section D of the BCRs, Radiology Clinical Output Specification**

*“MRI rooms require specially built radio frequency cages and special consideration to distances for magnetic fields.”*

*“All Clinical room sizes should be based on the largest radiographic equipment footprint to allow a fair and consistent procurement to take place.”*

- **SHPN 06-01**

Plan 32 in SHPN 06-01 notes a nominal room area of 45m<sup>2</sup> for an MR scanning room, which is not being met in G-Q1-134.

- **PCP 4.7 – Adaptability and Flexibility**

*“1.9 Changes to the Delivery of Radio diagnostic & Specialist Services*

*Project Co has significant experience of delivering specialist healthcare facilities, and is well versed in negotiations with equipment manufacturers to ensure that the building can cope with changing the equipment type and supplier. Project Co will work with the Board to leave selection of the equipment as late as possible in the programme to ensure that the most up to date equipment can be accommodated.*

*For further details refer to Section 4.16 Commissioning and Section 4.21 Equipment Strategy.*

*Project Co shall ensure that there is sufficient flexibility built into our proposals to cope with changes in how the Board wants to provide their services.*

- *within operating theatres – robotics, remote control, and greater integration of specialist equipment*
- *advances in MRI and imaging procedures and integration*
- *staffing arrangements and work patterns*
- *expansion or contraction of facilities due to demographic changes*
- *significant increase in number of different cancer treatments*
- *potential need to completely change the nature of the building during its life*
- *impact of information technology as more diagnostic services move to a digital environment.”*

#### **“4.3 Specialist Equipment**

*Project Co acknowledge that during the life of a healthcare facility there will be a requirement for replacement of specialist facilities. Dental chairs, MRI Scanners and operating tables may have differing service requirements. Using substantial previous experience and working in collaboration with preferred specialist equipment providers, Project Co shall ensure that the room can be adapted to accommodate different manufacturers of equipment. Floor service tracks shall be formed using sacrificial screeds which can be easily broken out when required.”*

#### **2.3.3 Summary**

Project Co’s proposed non-compliant design does not allow the Board to provide clinical services safely. The extent of 0.5mT gauss lines within the IOMRI exceeds the boundary of the IOMRI room and encroaches into the space above, below and in particular into the Operating Theatre. With regards to the MRI room, the extent of gauss lines exceeds the boundary of the room into the main hospital street (however, the Board notes the effect of shielding in the MRI room is still to be assessed). The equipment procured by the Board does not exceed the parameters provided pre FC, therefore, the design should be sufficient for the installation of the Board’s chosen equipment.

The Board believes that any remedial design needed to minimise the risk of the extend of gauss lines is Project Co’s responsibility. Any alterations to design, except where already agreed, are Project Co responsibility and no further Board instruction / Change should be requested.

**MEETING NOTE      DRAFT FOR REVIEW**

**Meeting Title:**      **Compliance with Completion Criteria - High Voltage Network and Four Bedded Room Ventilation Meeting**

**Date/ Time:**      6 December 2017 / 12.00 noon

**Location:**      MacKinlay Room, RHSC +DCN Project Office, Edinburgh

**Attendees:**

D. Anderson (DA)	Mott MacDonald
A. Clapp (AC)	IHSL
B. Currie (BC)	NHS Lothian
C. Derbyshire (CD)	Arcadis (Independent Tester)
D. Dryburgh (DD)	NHS Lothian
J. Edwards (JE)	Arcadis (Independent Tester)
R. Frame (RF)	Currie + Brown (LTA)
S. Fern (SF) (by teleconference)	Macquarie
I. Graham (IG)	NHS Lothian
G. Greer (GG)	Mott MacDonald
R. Hair (RHa)	Bouygues
R. Henderson (RHe)	NHS Lothian
J. Lewis (JL)	David Rollason Associates
D. Martin (DM)	IHSL
R. Osborne (RO) (by teleconference)	Macquarie
D. Pike (DP)	Multiplex
D. Rollason (DR)	David Rollason Associates
P. Wandless (PW)	Bouygues
W. Weir (WW)	IHSL

**Item****Action****1. Introductions and Purpose of Meeting**

BC welcomed everyone to the meeting. Introductions were made around the table.

BC outlined the purpose of the meeting which is to facilitate and conclude all parties understanding and awareness of the material technical issues allowing IHSL to re consider their position. Although a minute is being recorded it is hoped that proceedings would be relatively informal encouraging dialogue, discussion and participation by all present.

BC provided a summary background, highlighting the Board's most recent letters issued to IHSL and the Independent Tester on 3 November 2017 enclosing Independent Expert Reports regarding High Voltage and

Ventilation, subsequent discussions between the Board and Independent Tester and the Board's letter's to the Independent Tester of 29 and 30 November 2017 responding to points of clarification.

## 2. Ventilation

JE provided a summary background to four bedded room ventilation as he sees it.

JE highlighted the issue of apparent complexity with the financial close documentation in terms of stating ventilation requirements. A divergence of opinion exists between IHSL and NHS Lothian regarding compliance with these requirements.

The documentation presented at financial close, and subsequently, can support both view points in his view. However, as financial close documentation could be argued to be in conflict, the contractual process clearly gives the Board the right to choose the most onerous condition (Hierarchy of Standards Clause XXXXX). WW stated that IHSL may choose to disagree with this position.

DP and WW noted that MPX/IHSL are preparing their own technical reports for submission to the Independent Tester and the Board and will be able to present this within one week. As such, they are in attendance at this meeting in a listening capacity only and will not be making comments (with the exception of the statement above).

WW

BC asked the assembled parties if they had any questions or points of clarification. There were none.

BC asked JE if there was any further information that he required. JE responded that he was satisfied with information already supplied. JE will require the IHSL report on their position before he can proceed further.

## 3. High Voltage

JE provided a summary background to high voltage as he sees it

The issues regarding high voltage can be divided into three separate strands –

### 1. Process

2. Electrical Resilience
3. Physical Resilience

### 1. Process

JE noted issues of process, specifically that the documentation is not where he would have expected it to be in terms of designing the system to clinical requirements. Documentation regarding resilience was produced, however this was much later than expected and only after installation had commenced.

In terms of practical completion, JE confirmed that at present the process is non-compliant. Dialogue between IHSL and NHS Lothian is required to resolve this issue.

### 2. Electrical Resilience

JE noted that there is concern with the HV resilience within the system as it exists at the moment. Discussions are required between parties regarding the ability of the system to provide all areas with a high degree of resilience.

### 3. Physical Resilience

JE noted that, there does appear to be a resilience problem at the incoming switchgear room in terms of the origin of supplies. He expressed concern regarding the co-location of internal generator supplies and mains electrical supplies within a single room.

JE suggested that it may be advantageous for IHSL and the Board to agree on examples of HV Networks within contemporary acute hospitals in Scotland to provide a benchmark. BC and DP both agreed their respective organisations would provide these to JE within one week.

**BC**  
**DP**

BC asked JE if this benchmarking was to establish “Good Industry Practice”? JE responded that this was the case.

JE also expressed concern regarding the HV cable routes between the incoming switch gear room and substations, specifically in relation to cables contained within fire compartments.

JE stated that the electrical resilience, when viewed in abstract, is flexible, however this flexibility is reduced by the problems with physical resilience. JE expressed a view that, should the physical resilience issues be resolved, he anticipates that this would go a long way to also resolve the electrical resilience issues.

RHe agreed with this point in principle; however it was noted that scenario 'what if' testing would still be required as this was not carried out at financial close.

DP confirmed that construction of a "blast wall" to compartmentalise each substation into two areas from one has commenced and a formal transmittal to the Board will follow shortly. BC noted that the Board have observed this development on site; however this does not resolve concerns regarding location of cables in relation to fire compartments. JE agreed with this position.

BC asked the assembled parties if they had any questions or points of clarification. There were none.

BC asked JE if there was any further information that he required. JE responded that he was satisfied with information already supplied. JE will require the IHSL report on their position before he can proceed further.

#### **4. Actions**

- Action 1 – IHSL to provide technical reports to Independent Tester and the Board on four bedded room ventilation and high voltage.  
Timescale – one week
- Action 2 – the Board and IHSL, to furnish the Independent Tester with examples of HV systems within contemporary acute hospitals in Scotland.  
Timescale – one week.

<b>MULTIPLEX</b>	<b>Contractors Change Proposal</b>
	<b>MPX-CCP-050</b>
<b>Single Bedroom Ventilation</b>	<b>21/02/17</b>
Subject to Schedule Part 16 Section 5, BM proposes the following change as described below.	
<b>1.0 Detail of Change (Sch16:Pt5 2.1)</b>	
<p>The mechanical air change ventilation rate within single bedrooms has been decreased from 6 air changes per hour (6 ac/hr) to 4 air changes per hour (4 ac/hr).</p> <p>The BCRs require the facilities to adopt a natural ventilation strategy wherever possible, this reduction in mechanical ventilation, supplemented via openable windows within each single bedroom, is consistent with the vision to reduce energy consumption, ultimately reducing the overall carbon footprint. The ventilation design for single bedrooms is referred to as "mixed mode" ventilation. Where single bedrooms do not have openable windows, 6ac/hr has been provided.</p> <p>The mechanical extract ventilation air change rate has been increased within the single bedrooms ensuite from 3ACH to 10ACH (minimum) to provide a fresh environment for patients. This ensuite extract provides a balanced air change rate to the bedroom.</p> <p>The design intent and figures noted above are reflected within the environmental matrix previously submitted through RDD.</p>	
<b>2.0 Reasons (Sch16:Pt5 2.2)</b>	
<p>Contractors change has been proposed to align with the environmental matrix submitted through RDD.</p> <p>Whilst SHTM 03-01 ventilation in Healthcare Premises notes 6 ac/hr there is no reference made within the standards to mixed mode ventilation design. To align with the environmental matrix a contractors change has been proposed.</p> <p>Where ensuites have been provided with a ventilation dirty extract rate of 10ACH (min). The noted figure within the standards of 3ac/hr for is considered low for modern day facilities containing both shower and WC facilities within the room.</p> <p>There is no change to the above figures noted from Financial Close.</p>	
<b>3.0 Implications (Sch16:Pt5 2.3)</b>	
<p>Reduced energy consumption by providing reduced mechanical ventilation rates within each single bedroom.</p> <p>Providing the ensuite within a minimum 10 ac/hr ensures the extract performance duty has sufficient capability for both the wc and shower extracting, and ultimately provides the balanced ventilation rate required between the bedroom and the ensuite.</p> <p>Bouygues have been made aware of this change, confirmation received no impact to the overall FM operational plan.</p>	
<b>4.0 Indicate Savings (Sch16:Pt5 2.4, 2.4.1 + 2.4.2)</b>	
Not Applicable	
<b>5.0 Critical Date Decision Required (Sch16:Pt5 2.5)</b>	
Principles as noted within the environmental matrix and design drawings. Works constructed in line with this Contractors change.	
<b>6.0 Previous Related Correspondence</b>

### MESSAGE

WITHOUT PREJUDICE TO LOTHIAN HEALTH BOARD'S WHOLE RIGHTS, REMEDIES AND PLEAS WHICH ARE RESERVED

David,

Further to the Principals Meeting on 20 and 21 February 2018 between the Project Co, MPX and the Board, please note the following Board comments on the Single Bedroom Ventilation change submitted on the 21 Feb18;

#### Detail of the Change

- The Board do not agree with the detail of the Change
- Could Project Co please clarify the proposal at Financial Close, and what are Project Co requesting to Change
- Are Project Co requesting a change from the BCR's, or a change from Project Co Proposals?
- Assuming Project Co are requesting relief from compliance with the SHTM 03-01 with respect air change rates, can Project Co please state that in the change.
- The Board understands that the Change is required for deviation from the BCRs/SHTMs and that drafting should accurately reflect this.

- Can Project Co please also confirm which rooms they are wanting relief from relative to the air change rates.
- Please remove information that is not relevant to the Project Co Change

#### Reason

- The Board do not agree with the reasons provided.
- The Board understand Project Co altered the air change intake and extract rates to achieve the pressure regime required by the SHTM 03-01.
- Discussion required on the Project Co comment that an extract rate of 10ach/hr 'low for modern day facilities'?

#### Implications

- The Board do not agree with the implications noted
- An implication of a reduced air change rate is reduced air quality for the occupants of the room.
- The statement "*ultimately provides the balanced ventilation rate required between the bedroom and the ensembles*" is incorrect. Bedrooms should be positive to the ensuite and balanced/negative to the corridor.

Additionally, although not part of the normal agreed informal review of the Contractor Change (i.e. only reviewing 1.0 Detail of the Change, 2.0 Reasons and 3.0 Implications) the Board would like to highlight that the Aconex transmittals referenced in section 6.0 Previously Related Correspondence do not accurately reflect the full correspondence between the Board and Project Co. i.e. BMCE-RTRFI-000792 and BMCE-RFI-001145 both relate to the issue of draft derogations the Board rejected, however, this rejection is not referenced.

Please note the following when reviewing the attached;

1. The Board have provided the above comments to try and clarify the change that MPX are proposing.
2. As agreed the review has focused on the Detail of Change, Reasons and Implications sections only, however, highlights a concern relating to the previous correspondence.
3. As noted above, the Board comments are an attempt to clarify the technical elements of the Project Co Changes in order that the Board can undertake its diligence on the proposed Project Co Changes.

The Board would like to confirm that participation in this collaborative exercise with MPX and IHSL is not an indication or confirmation that the Board intends to accept a Project Co Change. The process is being undertaken to ensure that when the Project Co Change is received formally by the Board the detail and content is sufficient to allow the Board to fully review the proposal.

Kind Regards  
Kelly Bain

Please note that this email is issued entirely without prejudice to Lothian Health Board's whole rights, remedies and pleas and may not be referred to or founded upon in any circumstances whatsoever without our express consent.

**From:** Currie, Brian [REDACTED]  
**Sent:** 23 March 2018 13:08  
**To:** Greer, Graeme; Sansbury, Jackie; Mackenzie, Janice; Henderson, Ronnie  
**Cc:** Graham, Iain; Jennifer McKay  
**Subject:** RHSC + DCN - Information to inform a meeting with IHSL  
**Importance:** High

The Board are minded to invite IHSL to a meeting on Tuesday 27th March to discuss the basis of a commercial negotiation.

The following information has been asked for by cop on Monday 26th March:

1 Post Completion Activities essential for Hospital Operation with timescales and contractual status and which there is a reliance on IHSL and MPX. Also, likely impact on commissioning activities if ventilation remedials undertaken in this commissioning period.

- Board Changes
- ATD Works
- Equipment inc Quench Pipes
- Hospital Square Landscaping Works

any others?

2 Unresolved Contractual Matters essential for certification of completion by the Independent Tester:

- PCo Changes
- RDD status "C"
- Rights for Infrastructure outside boundary (SA1)
- Credit due to board for Board and PCo Changes (circa £750k)

3 Current possible non compliances:

Latest Schedule discussed yesterday pm.

4 Team view on credibility of a 5th June 2018 Completion date (assume for this satisfactory resolution on all non compliances discussed at "Sheraton" with exception of HV and 4 Bed Vent).

5 MPX vent proposals. A bit more Graeme on your initial comments received this morning to get a sense of how realistic the timings are:

- *Ventilation proposals – I need to review with Colin, however a few notes;*
  - *Ventilation Option 1 – £3.36m at 17 weeks (14 rooms reduced air change rate)*
  - *Ventilation Option 2 – £4.66m at 30 weeks (14 rooms at 4 ac/hr air change rate) – suggested 15% increase in the use of ventilation, that should be fine if 25% spare capacity has been provided? – need to understand the programme in more detail, and why longer and more expensive. Suspect because insufficient spare capacity has been provided.*
  - *Ventilation Option 3 – £6.54m at 40 weeks*

6 Check our correspondence with MPX on Quench Pipe to hopefully confirm that we have not at any time been deficient in communicating our reqs?

Review progress with all of this on Monday morning.

Many thanks

Brian

21	2 in 1 toilet seat	07/02/2016	CLOSED
22	Level Difference at link building	20/12/2016	Project Co Change – non compliant with the BCR's and PCP's – waiting to see on site
23	Gas Meter Housing	26/05/2017	Project Co Change – non compliant with the BCR's and PCP's.
24	Barrier matting	31/07/2017	Project Co Change – non compliant with the BCR's and PCP's – under review
25	BREEAM Certification	13/09/2017	Project Co Change – non compliant with the BCR's
26	To be advised	Not yet issued	Not yet issued
27	Movement Joint	31/07/2017	Project Co Change – non compliant with the BCR's – under review
28	To be advised	Not yet issued	Not yet issued
29	Curtain Tracks	31/07/2017	Project Co Change – non compliant with the BCR's – under review
30	Car Park E	31/07/2017	Project Co Change – non compliant with the BCR's – under review

### Non exhaustive list of Anticipated Project Co Changes to be considered by the Board

The list below is a non exhaustive list of Project Co Change, provided by Project Co but still to be submitted. Before the Board can consider / clarify the merits of the Project Co change, the Board requires the detailed Project Co change to be submitted.

Item	Title
<b>Original List</b>	
1	Temperature control valves and monitoring
2	Node rooms in basement
3	Post Completion As Built Energy Model
4	Post Completion NACCOSS Certificate
5	Post Completion Audiology Acoustic tests
6	Post Completion Medical gas Testing
7	Removable overhead door panels to corridors
8	Standing Seam roof finish
9	Skirting Change
10	Ceiling type spec change Plasterboard to grid
11	Amendments to walls in basement - Plant segregation
12	Post Completion Toucan crossing - design and coordinate outwith blue line boundary. Possible Board Change to remove from IHSL scope.
13	Bed Lift Core 3
14	Fire strategy relative to the removal of the sprinkler
15	Provision of gas store to level four
16	provision of two shower trays and pumping
17	FCU traps
18	Lifts
19	Post Completion Seasonal commissioning
20	Helipad - fitness certificate
21	Single bedroom & ensuite ventilation rates
22	Isolation Rooms - 2 way interconnection between bedroom / nurse station . Review against SHPN.
23	Water services (drainage and other services above clinical areas)
24	Void Detection installed below soffit.
25	Isolation room ceilings
26	Service yard wall movement / changes
27	Removal of WC (G-Q1-068)
<b>New items on the Project Co list</b>	
28	Warning Lights
29	HV distribution
30	ATD projects - need added
31	Amend void areas level 3 core 8.
32	Environmental Matrix -
33	Demarcation reports
34	Routing of services. Corridor layouts against any non compliance with standards to be tabled.
35	Flexible hose on Janitorial sink. Believe this cannot be hard piped and flex hose is required.
36	Integrated Nurse Call. Review if PCo Change required against SHTMs given standards written around stand alone systems.
<b>Items no longer appearing on Project Co list</b>	
37	DB cupboards
38	Medical Gases
39	Post Completion Thermal and Energy Efficiency Testing Procedure tests
40	WHB reduction - suggested as closed however no paperwork in place.
41	Waterless Traps
42	Post Completion - Certification relative to the remediation to Petrol station land
43	Chiller Compound shown outside red line boundary and relocated.

Issues
The list below is a collation of issues identified during the Board's room reviews and M+E site visits as well as those picked up by IHSL as recorded on Zutec, BYES as identified in their risk register issued to the Board Monthly and the IT in the Key Issues report. This list contains design issues that have not yet been resolved (i.e. are not a compromise), do not fall under a 'non-compliance' or are issues on site that are waiting to be resolved.
With regards to IHSL, BYES and IT issues this list is not an exhaustive list of all issues, only those identified as being of significant concern to the Board. For the full list of issues please refer below links:

formatting: x

IHSL site observations	BYES Monthly Risk Register	IT Key Issues Report

Title	Location	Design Issues	Raised by	Action	H&S	Non-Compliance	Poor Construction	Construction Co-ordination	Design Issue	Work in Progress
		Medirails fixed in the incorrect locations due to bedhead trunking not being installed in some rooms as expected with the medical gases always nearest to the bedroom door. Also clashes with TCT sockets and some curtain rail stops need moved.	Board	Board to review rooms with MPX on an individual basis to ensure the correct solution is achieved. MPX may just fit additional rails as the easiest solution.				x		
		Audiology	Board	Review cancelled until January. The Board to review the rooms before CG's walk round. AE to arrange for JM/DS to see the rooms as soon as possible.						
		DCN Adult wardrobes current have white finish. This was sigend off during RDD as timber finish.	Board	MPX reviewing on site. Raised in Monday morning meeting 16/10/17 - AE confirmed that the doors will be changed to a wood effect finish.		x		x		
		A number of reception desks do not have the graphics applied	Board	AE confirmed that the missing graphics will be fitted.						
		TV bracket and whiteboard clash.	Board	Whiteboards to be moved. Raised in Monday morning meeting 16/10/17				x	x	
		Lack of screws to door hinges.		Raised in Monday morning meeting, MPX should have loaded to Zutec			x			x
		Screw caps missing, Required for infection control	Board	Raised in Monday morning meeting 16/10/17 and in discussions with Project Co to resolve.			x			
		Door stops not installed and this is causing damage to walls	Board	Raised in Monday morning meeting 16/10/17 and in discussions with Project Co to resolve.						x
		Easy clean keepers not installed	Board	Raised in Monday morning meeting 16/10/17 and in discussions with Project Co to resolve.				x		
		Shaver sockets are not installed in en-suites	Board	Raised in Monday morning 16/10/17 meeting and in discussions with Project Co to resolve.				x		
		Poor finish to wall / architrave joints around doors. Requires sanding or wider architraves	Board	Raised in Monday morning meeting 16/10/17 and in discussions with Project Co to resolve.			x			
		Panic alarm pulls - are the upside down?		Raised in Monday morning meeting 30/10/17. AE to review with KH. - now urgent			x			x
		Theatre Doors: MPX (LES) to review Aconex re Obscure glass and laser issues.		MPX have confirmed they will comply with Board requirements		x				x
		The solution for door clashes during design has not materialised on site.	Board	Raised in Monday morning meeting and noted that 11 issues can not be rectified. En-suite door swings to be reviewed on site today. Note: En-suite doors swings resolved post meeting on 20/11/17 - DCN rooms to be reviewed 28/11/17 - DH to feed back any comments				x		
		Some ensuite doors open onto the toilet	Board	Raised in Monday morning meeting 23/10/17 and in discussions with Project Co to resolve.				x		
		Movement joint proposed solutions not being actioned on site and Board has not reviewed what has been constructed	Board	Raised at Monday morning meeting 23/10/17 and PMG						
		Metal grills to Recovery bays / Anaesthetic rooms in Theatres have a small square finish. This will be difficult to clean.	Board	AE to review specification. Raised at Monday Morning Meeting 23/10/17. AE to review specification - MPX currently requesting a change			x			
		Why have IPS units been installed in the prep room?	Board	Raised in Monday morning meeting 23/10/17 and in discussions with Project Co to resolve. AE to check with M&E team why 100% IPS sockets have been installed.				x		
		Outstanding query whether panic alarm pulls are upside down.	Board	Raised in Monday morning meeting 23/10/17 and in discussions with Project Co to resolve.			x			
		Sloping Tops to be added to CDC's.	Board	Sloping tops will be added						
		Still to be installed: ➤ Shelf in en-suites ➤ Shaver sockets. ➤ Toilet backrests. ➤ Bed bump rails.	Board	Raised at Monday morning meeting 06/11/17 and PMG						
		Back plates to Gel dispensers.	Board	Raised at Monday morning meeting 06/11/17 and PMG						
		Infection control concerns re on site newly installed wc's being used by the workforce. AE/SJ to use all efforts to stop this action. - Board have also now found plastic bottles of fluid behind an IPS panel, which had been removed.	Board	Raised at Monday morning meeting 06/11/17 and PMG: AE/SJ to use all efforts to stop this action. MPX to lock down areas wherever possible.	x					
		Nurse Call Pulls being installed in visitors wc's (Example C1.1-070)	Board	Raised in Monday morning meeting 20/11/17 - AE to stop this happening				x		
		Curtain tracking and ceiling hoise clashes	Board	Raised in Monday morning meeting 20/11/17 - To be reviewed on site on a room by room basis.			x	x	x	
		Corridor service doors - installed pull handles are not acceptable as advised by the board 30/01/17 MM-GC-002483	Board	Raised in Monday morning meeting 20/11/17 - LES reviewing		x				
		Children's Parents beds: Infills to be installed. MPX awaiting materials.	Board	Raised in Monday morning meeting 28/11/17 - MPX awaiting materials.						x

	Air pressure stabiliser within casing. Confirmation on cleaning requirements required.	Board	Raised in M+E visits						
	Theatre entrance from anaesthetic room, no air pressure stabiliser or transfer grille apparent.	Board	Raised in M+E visits			x	x		
	Core from theatre ceiling to plant room above for cable way, not good practice with potential for spillages in plant room to contaminate theatre suite.	Board	Raised in M+E visits			x			
	Planting and vegetation around air intake louvres should be removed to comply with SHTM 03-01 p1.42.	Board	Raised in M+E visits		x				
	Dead leg in water supply to helipad fire fighting system with no apparent backflow prevention device.	Board	Raised in M+E visits		x				x
	2nd floor plant room: Duct configuration does not appear to leave sufficient space for two quench pipes	Board	Raised in M+E visits				x		
	IPS cabinets G & H located adjacent to drainage access point Permanent labelling detailing the areas served to be fitted IPS cabling not terminated No evidence of IPS CPC / bonding conductors at the IPS cabinets Electrical Supply to IPS cabinets not installed	Board	Raised in M+E visits			x			x
	No evidence of IPS circuit bonding conductors at the IPS cabinets. The Main Bonding conductor between the IPS & the ERB is present.	Board	Raised in M+E visits		x				x
	Cardboard used to protect cables against edge of containment. Fire alarm cabling appears to be installed with IT cabling / on IT basket. Fire alarm cable fixings incorrect type used.	Board	Raised in M+E visits			x			
	Theatre recovery: No evidence of nurse call, medical gas or IPS alarm panels, despite the apparent completion of this area.	Board	Raised in M+E visits						x
	Theatre Corridor: No line valves are provided at major branches in distribution network No evidence of cross bonding between medical gas pipework & local electrical containment.	Board	Raised in M+E visits			x			
	Radiology: Door frame packed out in door opening, not in accordance within manufacturer's limits to maintain fire resistance of doorset.	Board	Raised in M+E visits		x				
	UPS output Switchboard 2 Switchboard is supposedly a Form 4 type 6 board. Schneider state that to achieve Form 4 type 2 or 6 that the incoming devices should be 4 poles. The incoming devices are three poles with un switched neutral.	Board	Raised in M+E Report WK 43		x				
	Incoming Supply to UPS Switchboard 2 not installed.	Board	Raised in M+E Report WK 43						x
	UPS Plantroom unlocked, live electrical supplies,	Board	Raised in M+E Report WK 43	x					
	Switchgear has not been protected when carrying out coring of slab above. Busbar end Termination box & rising bus bar require to be cleaned & checked.	Board	Raised in M+E Report WK 43			x			
	Section Board A1/B located at substation 2 end of building served by pair of 4c 185 mm2 cables from substation 1A & 1B. Appears to be an excessive cable size for load supplied.	Board	Raised in M+E Report WK 43					x	
	Rainwater Plantroom Floor wet, approx. 25mm deep.	Board	Raised in M+E Report WK 43			x			
	Incoming gas main, no electrical earth bonding present in Rainwater Plant Room	Board	Raised in M+E Report WK 43	x					
	Fire alarm cable not supported in Rainwater Plantroom	Board	Raised in M+E Report WK 43			x			x
	Open trunking lid with energised distribution board in theatres	Board	Raised in M+E Report WK 43	x					
	Difficult access to dry riser valve in theatre	Board	Raised in M+E Report WK 43			x			
	Smoke Detector installed in theatres is too close to wall. Heat and smoke detectors should not be mounted within 500 mm of any walls/partitions	Board	Raised in M+E Report WK 43		x				
	Warning light for X ray & Laser - Confirm what sockets are provided for the X ray socket & Laser. Confirm if door interlock provided when Laser in use.	Board	Raised in M+E Report WK 43						
	Insufficient quantity of bonding points provided. Minimum of 4 per patient location required in Group 2 area.	Board	Raised in M+E Report WK 43		x				
	There are 4 x waterproof sockets in the IPS panel, however, ordinary double sockets have been installed below	Board	Raised in M+E Report WK 43			x			
	Confirm if light switches in CAMHS are to be same finish as sockets i.e. brushed metal finish with tamperproof screws. If so this installation is incorrect.	Board	Raised in M+E Report WK 43		x				
	In CAMHS there is a clash between ventilation ductwork and electrical tray	Board	Raised in M+E Report WK 43			x			
	Medical gas outlets not labelled circuit A or B despite we understand that this area has been tested. IPS sockets not coloured blue on bedhead. There should be a minimum of 4 no supplementary earthing points provided per patient location.	Board	Raised in M+E visits		x				

		Basement HV Plant Room Lobby This area has been classified as HV. This lobby has an LV section board and should be designated LV and the inner doors to the HV areas should be the HV areas.	Board	Raised in M+E visits							
	G-X1-002 – Plant room 2	Generator room, no apparent light switches and no lighting shown on drawing ME-Z5-00-PL-541-001 Rev B.	Board	Raised in M+E Report WK 44						x	x
	G-X1-001 – Plant room 1	Very poor housekeeping with toxic liquid containers. Risk of leakage or spillage.	Board	Raised in M+E Report WK 44	x						x
	G-X1-001 – Plant room 1	IT Node cabinet located in boiler plant room with no plinth or bund. This will increase the risk of damage if flooding occurs. Dust and heat from boiler plant will have detrimental effect on lifecycle of this equipment. Shown on drawing as wall mounted.	Board	Raised in M+E Report WK 44						x	
	G-COR-011 - Corridor	Corrosive liquids stored in un-bundled containers. Any spillage would be contained in a bund.	Board	Raised in M+E Report WK 44 - MPX manager advised onsite	x						
	2-PLANT-003 – Theatre plant room 02	Area previously reported to be reconfigured to make space available for MRI quench pipes, has now been fire stopped before reconfiguration work carried out.	Board	Raised in M+E Report WK 44						x	x
	2-PLANT-003 – Theatre plant room 02	During site walkthrough, drainage pipework incurs movement as water flows. Possible source of future leaks.	Board	Raised in M+E Report WK 44						x	
	2-PLANT-003 – Theatre plant room 02	Duplex AGSS pumps appear to be duty pump manual changeover instead of automatic. If automatic would allow lead pump changeover when not in use.	Board	Raised in M+E Report WK 44						x	
	2-PLANT-003 – Theatre plant room 02	UPS distribution panel not sufficiently supported. Top bolts seen to be missing	Board	Raised in M+E Report WK 44							x
	2-PLANT-003 – Theatre plant room 02	Double stacked AHU with light switch on upper unit, out of reach without access equipment.	Board	Raised in M+E Report WK 44						x	
	G-COR-001 - Atrium	Example of access equipment required for maintenance work in Atrium. Future maintenance work will be a health & safety concern.	Board	Raised in M+E Report WK 44	x						
	1-H2-029 - Corridor	Damaged power supply wiring to temporary supply units. Test label indicates last test carried out 15th May 2016.	Board	Raised in M+E Report WK 45	x						
	4-H1-034 – Switch Cupboard	Poorly fitted trunking lids, missing trunking lid	Board	Raised in M+E Report WK 45 - project progression - no action							x
	4-plant-002 – Central AHU plant room 2	Un-used distribution cabinet located within riser.	Board	Raised in M+E Report WK 45							x
	4-RF-008 – External Plant 02	Helipad ramp now includes lighting however HBN 15-03 recommends that the luminaire should be installed no higher than 25 cm from the bottom of the ramp and pointing down toward ramp. Calculations have not been submitted for lighting levels to cannot ascertain if this complies with relevant standards.	Board	Raised in M+E Report WK 45	x					x	
	4-RF-008 – External Plant 02	Cable route to chillers from inside the building now have wired but still causing a potential route for water ingress as water will run down sheath of cables (Top photo: Week 41 Report. Bottom photo: Current). Current protective covering is not tied down and could open with high winds.	Board	Raised in M+E Report WK 45							x
	4-PLANT-001 – Central AHU Plant Room 01.	Control panels are placed in reduced access areas. This should be designed in conjunction SHTM 00 – Best Practice for Healthcare Engineering – Chapter 9 Engineering services. Checks should be made to make sure this area aligns with Access and Maintenance strategy. Access to isolating switches poor, permanent labelling to be fitted.	Board	Raised in M+E Report WK 45						x	x
	4-PLANT-001 – Central AHU Plant Room 01.	No evidence for equipotential bonding within the plant room which does not comply with BS 7671. Access to isolating switches & control panels should be installed / designed in line with SHTM 00 – Best Practice for Healthcare Engineering – Chapter 9 Engineering services. Checks should be made to make sure this area aligns with Access and Maintenance strategy. Permanent labelling to be fitted.	Board	Raised in M+E Report WK 45	x						x
	4-R1-013 – 1:1 Room	Damaged power supply wiring out of temporary supply units while being used. Should be removed from site.	Board	Raised in M+E Report WK 45	x						
	3-C1.8-015 – Treatment Room (Surgical short stay)	Gap between trunking and wall surface. Could cause potential problems in regards to HAI-SCRIBE and should be monitored to see if works progress.	Board	Raised in M+E Report WK 45 - not immediate H&S risk	x						
	3-CORE-008A - Switch cupboard	Lift and changeover control panels located in reduced access spaces. This should be designed in conjunction SHTM 00 – Best Practice for Healthcare Engineering – Chapter 9 Engineering services. Checks should be made to make sure this area aligns with Access and Maintenance strategy. Permanent labelling to be fitted.	Board	Raised in M+E Report WK 45	x						x
	3-COR-015 – Lift Lobby	Pipework valves located at high level above plasterboard ceiling. This raises concerns of access and maintenance when fully finished. No evidence of cross bonding of pipework services (incl. medical Gas) & containment.	Board	Raised in M+E Report WK 45						x	x
	External Service Strip	Water meter has been fitted but there is no evidence of housing being built to protect water meter and valves. Allowances should be made to protect against frost.	Board	Raised in M+E Report WK 47							x
	External	Temporary building supply into the building. Fire mains is no longer in use within the building which may indicate water mains have been connected.	Board	Raised in M+E Report WK 47							x

		The IT understands that the wrong fitting was installed on some internal drainage connections through slabs resulting in connections being made in the thickness of the slab and that discussions regarding a warranty from the installers in respect of joints in the slab were being discussed between Multiplex and the suppliers. The IT	IT	TBC						
		The IT noted the window installation on the curved end of the Blue Zone, has a poor cill drip detail, due to the curvature of the wall, which could lead to rain water tracking back under the cill.	IT	TBC						
		The IT identified significant random cracking to the lightweight screed covering the under floor heating in the Blue zone atrium. Whilst some of the cracking appears to follow construction joints the IT is concerned that others follow a random path. Details of making good the item is requested from Multiplex.	IT	TBC						
		The IT has raised concerns regarding the alignment of duct connections to AHUs particular in the main 2nd floor plant room. The angle of transformation is steeper than that recommended by CIBSE and the IT is concerned that to obtain the correct air volumes against the resistance imposed by these transformation pieces noise could be generated that in turn will be noticeable in clinical areas.	IT	Noise issues to be monitored by IT during commissioning						
		During the witnessing of fire alarm panel test on 9th August, we found the current location of the fire alarm panel is inside a cupboard together with the electric distribution board (400V) which is non-compliant. The fire alarm panel needs to be located in an accessible and safe location and in accordance with section 2 of BS 5839-1:2013	IT	TBC						
		The positioning of electrical distribution boards and other equipment within riser cupboards does not allow for doors to be opened through 90o in some cases and in others will require any person working on the equipment to reach into the riser cupboard due to the position and height of the partition below the access doors. The revision of the access arrangements and locations of these items is being actively reviewed by Multiplex however further examples were identified during July.	IT	TBC						
		There is insufficient room to access the lighting control panels, mounted on the return partition wall, from inside the riser cupboards. The revision of the access arrangements and locations of these items is being actively reviewed by Multiplex.	IT	TBC						

## Non exhaustive list of Potential Non Compliances

The list below is a non exhaustive list of Potential Non-compliances still to be fully investigated.

Item	Title	Issue	RAG	Action	MPX response
1	Lighting in Fire Fighting Stairwells	The lighting within the 7 fire fighting shafts / stairwells and associated lobby has been installed with single circuit from the local lighting distribution boards that are not supplied by the fire rated cables.  The Board believes all fire fighting stairwells should be supported by a primary and secondary fire rated power supplies from dedicated distribution boards and automatic changeover for dual fire rated supplies.		Action with IT/MPX	Position: NHSL have responded to Arcadis IT.  Current Action(s): Arcadis to provide feedback and guidance back to NHSL (MPX).  Close Out Date: 28th Feb (dependent on outcome) Outstanding from Arcadis – No Movement for 2 weeks.
2	Non Fire Rated IPS / UPS cabling	For compliance with BS 7671 and Guidance Note 7, and also BS 8519 circuits associated with essential life-support services should be either fire-rated or fire-protected. The implication of this is, in the event of a fire, power may be lost to essential life safety medical equipment in critical areas.  Current Project Co's design consist of non fire rated cables to IPS bards serving critical areas.		Action with MPX/MER	Position: MERCURY INSTRUCTED  Current Action(s): MERCURY reviewing data. Scope meeting held today to close out any outstanding info. Site Start within 2 weeks.
3	No earth bonding in certain required areas.	No equipotential bonding has been installed 144 Group 1&2 rooms. Equipotential bonding is required to prevent electric shock to patients, staff and visitors.  A sample room has been offered by Project Co to the Board for witnessing indicating installation of equipotential bonding boxes. The Board understands this will now be installed in all 144 Group 1&2 rooms.		Project Co have installed the equipotential bonding boxes. (Closed) - Board to review on site	Position: WORKS ONGOING (MER COST)  Current Action(s): Mercury confirmed works will be completed by end of March.
4	Bedroom ventilation pressure regime and air change rate in rooms for neutropenic patients	Neutropenic Patients - As per SHTM and Clinical Specs, the rooms for neutropenic patients should be designed as isolation rooms (+10 positive pressure). However, there are 10 single rooms which Project Co have designed to balanced pressure.		with MPX to review compliance argument	Position: NHSL believe all single bedrooms should be able to cater for Neutropenic patients. MPX believe the department design meets the brief.  Current Action(s): NHSL replied on 08 March 2018 15:19. MPX collating response.  Close Out Date: Date 28th March (await Tuv-Sud to formulate response / HLM received)
5	25% spare capacity	The 25% spare capacity should be provided by Project Co in terms of main and sub main distribution containment, UPS boards, AHU, physical space in voids and ceilings, risers.  Its apparent from site visits, the spare capacity has not been provided.		Action with MPX/WW - report to be submitted	Position: NHSL believe there is insufficient spare capacity within building services.  Current Action(s): Walkround held on 8th March with NHSL. Agreed list of comments for MPX to review.  MPX providing evidence per NHS request from walk round.  Close Out Date: Friday 23rd March 2018 for MPX response. MPX currently collating evidence, from walkround the work scope to cover was more than anticipated. Target date for release 30th March 2018.
6	HV distribution	In relation to system resilience, the Board believes Project Co's design for HV Distribution is non-compliant with the Board's Construction Requirements (BCR's), Project Co Proposal's (PCP's) and SHTM Guidance for the following elements: 1. Resilience of the HV main intake switch room, 2. HV cable distribution, 3. HV / LV substations.  The Board believes the design currently creates single points of failure at the HV side of the electrical distribution network.  The Board understands Project Co are working on a revised design.		Work in progress action with MPX and Board.	Position: Energy Centre Technical Element Closed. Basement NHSL have raised issue with IT.  Current Action(s): Await IT to provide clarification on compliance. Verbally received confirmation there are no more comments. MPX have minuted (PMG held on 8th March 2018) to IHSL regarding the considerable timescale it has taken Arcadis (John Edwards) to respond to MPX regarding compliance confirmation. It was highlighted this response is critical to progress works forward. We understand the NHSL have given John Edwards additional information for his consideration which may be the reason for the delayed response. No movement made in 2 weeks.  MPX have instructed Mercury to proceed with the works we are aware of (DSSR report).
7	4 bed ventilation	In relation to ventilation pressure regimes, the Board believes Project Co's design for ventilation is non-compliant with the Board's Construction Requirements (BCR's), Project Co Proposal's (PCP's), SHTM Guidance and RDD FC comments.  In addition, the Board believe the intake air change rate and the extract air change rate are non-compliant.  From a clinical perspective, the principal concern to the Board in continuing with Project Co's proposed pressure regime design means there is an unacceptable risk of the spread of bacterial airborne infections into corridors and surrounding patient rooms (positive to the corridor)  The Board requires the pressure regime to be balanced or negative to the corridor.		Board waiting for response from Project Co	Close Out Date: Tuesday 27th February 2018 (Outstanding from IT) Position: MPX have QC opinion on contractual position. Subject to further discussion next week. NHS have changed their position on what is acceptable and reverted to all 20 rooms at 4 AC/H. This will have major consequences.  Current Action(s): subject of further letter and discussion by the parties.  Close Out Date: 2nd March 2018 (Dependent on Outcome)
8	Bedhead trunking earth bonding points	All bedhead trunking installed in Group 2 Medical Locations is provided with only 2 supplementary equipotential bonding points. This is not in compliance with GN7, which requires minimum 4 for medical IT sockets (IPS sockets).		Tied to item 12	Position: MERCURY PROGRESSING WORKS  Current Action(s): MER progressing with agreed solution.
9	Lack of non IPS sockets in theatres	All sockets outlets within these departments except for Cleaners outlets and a limited number of "raw power" sockets in some areas, are Medical Equipment blue sockets. No provision has been made for equipment that should be plugged into an RCB protected outlet whilst in the patient zone.  Also, no x ray sockets (dedicated socket).		Work in progress action with MPX	Position: MERCURY BEING INSTRUCTED  Current Action(s): MERCURY reviewing data. Scope meeting held today to close out any outstanding info. Site Start within 2 weeks.
10	Drainage above IPS rooms / above IPS panels	PCo have installed drainage above exclusion zones, electrical equipment and other high risk locations except above MRI rooms where this has been completely removed.		MPX actions (make note of three points)	Position: MERCURY BEING INSTRUCTED  Current Action(s): MERCURY reviewing data. Scope meeting held today to close out any outstanding info.
11	Cable discrimination and cable calculations (electrical issue)	Project Co has not submitted cable calculations through RDD for Board's review. This is required as per 4.23.2 (Mechanical & Electrical Specification) Project Co Proposal. The Concern is that the selection, grouping, rating and fault levels of cables is inappropriate and non-compliant with BS 7671.  As evidenced on site, there are several instances of cables being double and triple banked, as well as being grouped tightly together.		Calculations issued, under review	Current Action(s): Tuv-Sud preparing schedule of calculations due no later than 16th March 2018. Schedule received from Tuv-Sud on 16th March, MPX have sent back with comments as level of information insufficient.  Tuv-Sud confirmed this would be available 23rd March for distribution to NHSL once re checked. Prior to this we have sat with the NHSL and reviewed various output data and factors which have been Tuv-Sud to review. Close Out Date: 23rd March
12	Lack of tamper proof flush fitted sockets in CAMHs	Sockets not installed as per small power layout drawings. i.e. flush fitted tamper proof sockets.		Closed - Board issuing change for areas not previously requested	Position: NHSL require metal clad sockets in CAHMS rooms.  Current Action(s): MPX to complete sample room for sign off. NHSL to raise BOARD CHANGE for items as discussed at CAHMS workshop (i.e. trunking to be removed, data to be removed, nurse call to be removed, etc)  Close Out Date: Sample room to be ready by 23rd March 2018 (Await deliver of blank plates)
13	Single Bedroom Ventilation air changes	Air change rates proposed by Project Co for single bedrooms are not in compliance with SHTM 03-01 and Board's comments. 4ac/h supply provided to the bedrooms instead of the required 6ac/h. The ensuite extract rate proposed in excess of 10ac/h where requirements of SHTM 03-01 is 3ac/h.		Project Co Change	Position: NHSL have rejected change. Albeit it was discussed and agreed in principle at mediation.  Current Action(s): Board to confirm position on this change and whether fundamentally it will or will not accept 4 air changes per hour in the single bedroom.  MPX reviewing its position on resubmitting the change or withdrawing.
14	Smoke clearance in fire fighting stairwells	As per the Non Domestic Technical Handbook and project specific Fire Strategy, all fire fighting stairwells shall be provided with appropriate ventilation for heat and smoke control. Currently only a percentage of stairwells appear to have openings for high level ventilator. No details of electrical connections including fire rated cables for fire fighting plant as per BS 8519.		Action with MPX	Position: NHSL have provided comments back to MPX for review.  Current Action(s): MPX currently reviewed. Issue plan to board & IT Close Out Date: Friday 23rd March
15	access hatches	Proliferation of Access hatches have been installed within theatre suites which is non-compliant with BCR clause 8.14 Service Routes and "Good Industry Practice".		Board to query	Position: LINEAR PROGRESSING WORKS  Current Action(s): Works ongoing onsite.
<b>AL ITEMS RAISED BY THE BOARD (Detail provided by the Board on 31 Jan 18 - minus Principals meeting items).</b>					MPX response comment up to 06.02.17 (Text in italics is commentary received from NHSL)
16	Reductions to ceiling heights	In addition to the Project Co Change 016 (Basement Ceiling Heights), further Height reduction in basement areas/service yard appear to have been reduced 2100 without the agreement of the Board.		Item currently closed	Board confirmed no further comment 31.01.2018
17	Duct Cleaning	Duct cleaning - SHTM states all ducts must be cleaned unless they have been protected. MPX not proposing to clean all ducts as believe they have sufficiently protected the ducts following installation. IT advised MPX will have to do a check to confirm ducts aren't dirty		Action with MPX to evidence clean ducts on site	MPX current providing confirmation of compliance. No change anticipated.
18	Number of lift stops	Number of lift stops - BCR 8.8.11 - "RHSC Lifts should not stop at DCN floors, and DCN lifts should not stop at RHSC floors". Board in agreement with the Project Co change, however change required to clarify.		Bed lift Change to be submitted	Bed lift change submitted
19	Helipad fire fighting system (Water Pressure)	Helipad fire fighting system does not comply with the guidance of HBN 15-03 Hospital Helipads clause 5.22. There does not appear to be a pressurised main supply, nor is there a system of inert gas to pressurise the system.		Action with MPX to respond	Under review Helipad fire fighting system does not appear to comply with the guidance of HBN 15-03 Hospital Helipads clause 5.22. There does not appear to be a pressurised main supply, nor is there a system of inert gas to pressurise the system.

20	Vegetation around air intakes in Neuroscience Courtyard	Landscape design around intake vents in Neuroscience Courtyard is potential non-compliant with SHTM 03-01 which states:  Air Intake 1.42 An uncontaminated air supply to the system is essential. In order to achieve this, the air intake will be positioned so that air discharged from extract systems or other dubious sources cannot be drawn in. Exhaust fumes from vehicles can present particular problems. The area surrounding the intake will need to be kept clean and free of vegetation and waste material in order to reduce the possibility of biohazards or fire. The intake itself will be protected by a louvre and mesh screen to prevent rainwater, vermin and insects etc from entering the system.		Closed - move to compromise list	This has been resolved with NHSL, CCP 053 covers.
21	"Do not use" labels removed from Medical Gas Outlets before commissioning.	Medical gas outlet "Do Not Use" labels removed before commissioning, non compliance with SHTM02-01.		Closed	This is being rectified, no change is required.
22	Isolation Room supply ventilation relative to low building.	Isolation room ventilation is non-compliant for a 'low' building. There should be a separate supply and a contractors change will be needed.		Action with IT	No change anticipated.
23	Drainage joints in slabs	Drainage outlets - Drainage joints have been installed in the slab between floors with no access for maintenance or repair. This means there is no manufacturer warranty for the drainage connection.		MPX rectified - Action with IT to confirm	This is being rectified, no change is required.
24	Fire Collar installation	Fire collars for drainage are not directly connected to the slab+C19		Action with IT	more information required Update required by the Independent Tester. The Board understands the fire collars for drainage are not directly connected to the concrete slab.
25	Level and position of smoke detectors	Smoke detectors mounted at low levels above the ceiling i.e. not installed at the heights specified for void detectors		Rectified by MPX - with MPX/BYES	This is being rectified, no change is required.
26	Ventilation in IPS	ventilation in IPS - PCo have shown 3ac/h extract ventilation in the EM but not all - Potential heat gain issue.		there is evidence this has been actioned on site. MPX to confirm	This is being rectified, no change is required.
27	Hot and Cold water supply pipe configuration	Hot and cold water supply pipes are crossed behind the sink in some rooms and in some instances the cold pipe is above the hot water pipe or touching the pipe meaning the will be heat transferred to the cold water supply. Not best practice and non compliance with SHTM 04-01		Action with IT	design is compliant. No change anticipated.
28	Windows/Partition in 1-B1-055	The GA and C sheet illustrates a 3 panel window however, in construction one panel appears to be 'false' with a partition behind it. From the inside it appears to be only 2 windows.		Closed and moved to compromise list.	Board confirmed no further comment 31.01.2018
29	Mounting heights for clinical lights	The heights clinical lights have been mounted at cause and obstruction		Closed	This is being rectified, no change is required.
30	Lightning Protection	Potentially deviated from design agreed with Consort		Expected to revert to original design - to be confirmed during commissioning	No change currently anticipated, currently being discussed with project teams.
31	Gas supply to bedhead trunking	Supply has not been installed on site as per Board comments during RDD process.		Closed - move to compromise list	Board confirmed no further comment 31.01.2018
32	Concealed ceiling grids	Ceiling Grids are not concealed and not constructed in line with RDD drawings		Check Project Co Change 033	CCP 033.
33	Soft Landscaping planting specification	Planting on site not as per planting schedule. i.e. Clematis appears to be climbing but should be bush/ground variety		MPX to confirm - Board to arrange further review that includes the courtyards	Under Review PMCGPlanting on site not as per planting schedule. e.g. clematis appears to be climbing but should be bush/ground variety.
34	Wrong terminators fitted in warning lights	Warning Lights: - Terminal strip connector in theatres to be removed and correct terminations provided, all warning light boxes. - light box deformed where glanded		Closed - raised on zutec	Installation is compliant
35	No evidence of IPS circuit bonding conductors	No evidence of IPS circuit bonding conductors at the IPS cabinets. The Main Bonding conductor between the IPS & the ERB is present.		Work in progress	Board confirmed no further comment 31.01.2018
36	Fire resistance of radiology door frame	Radiology: Door frame packed out in door opening, not in accordance with manufacturer's limits to maintain fire resistance of doorset.		Closed	Board confirmed no further comment 31.01.2018
37	UPS output switchboard with incorrect poles	UPS output Switchboard 2 Switchboard is supposedly a Form 4 type 6 board. Schneider state that to achieve Form 4 type 2 or 6 that the incoming devices should be 4 poles. The incoming devices are three poles with un switched neutral.		MPX to confirm	Currently being reviewed. UPS output Switchboard 2 is a Form 4 type 6 board. Schneider state that to achieve Form 4 type 2 or 6 that the incoming devices should be 4 poles but the incoming devices are 3 poles with un switched neutral.
38	Corridor service door handles	Corridor service doors - installed pull handles are not acceptable as advised by the board 30/01/17 (MM-GC-002483) during room review (corners of handles at childrens head height)		Rectified - closed	Board confirmed no further comment 31.01.2018
39	Outstanding Status C RDD	Numerous outstanding RDD		Ongoing with Project Co to resubmit for Board review	Why does this require a change? It needs to achieve A or B status.
40	Remaining Permanent Infrastructure outside the red line boundary (CCTV etc)	Still waiting for legal agreement for infrastructure outside the site boundary.		SA1 to be agreed	Project Co do not have a legal agreement to install the permanent infrastructure outside red line. Until this is obtained, Project Co are unable to provide compliant design as per Financial Close position.
41	Seasonal Commissioning	Potential for some seasonal commissioning tests to be complete post hand over.		Project Co Change	CCP049
42	Environmental Matrix	EM reflects M&E issues currently considered non compliant		ongoing	See Item A above.
43	Routing of services. Corridor layouts against any non compliance with standards to be tabled.	services are currently running through clinical areas that were not included within the original Project Co derogation.		Project Co Change 055 - Do MPX need to update change to include all services	See Item N above.
44	Nurse call in WC	There is evidence from the site (room C1.1-070) that nurse call pull cords have been installed in some visitor's WCs. However no nurse call should be installed in visitor's WCs.		MPX to undertake survey of visitor WC's - ongoing	Compliance. Change required from Board to deviate. There is evidence from the site (room C1.1-070) that nurse call pull cords have been installed in some visitor's WCs. However no nurse call should be installed in visitor's WCs.
45	Unidentified Circuits	Electrical circuits are not identified or labelled at terminal rail inside trunking. Consequently, there is no way to identify which cables enter and leave the circuit terminal strips.		TBC on site	Under Review Electrical circuits are not identified or labelled at terminal rail inside trunking. Consequently, there is no way to identify which cables enter and leave the circuit terminal strips.
47	Fire alarm cable bands	Cable bands for fire alarms are plastic rather than metal. Metal ties are required by BS and are proposed by Project Co M&E specifications (4.23.3 of Section 4 of Schedule Part 6).		Action with MPX	being rectified. Cable bands for fire alarms are plastic rather than metal. Metal ties are required by BS and are proposed by Project Co M&E specifications (4.23.3 of Section 4 of Schedule Part 6).
48	IPS units earthbar termination - 1-B1-044 - IPS Room				Under review. Currently some of the IPSs show the inside of an IPS unit. Earth bar at the top of the unit is empty. CPCs from IPS circuits should be terminating at this bar.
49	IPS sockets supplying non medical equipment	IPS socket found on site providing power for the television, scale of the issue still to be determined.		Closed	IPS socket found on site providing power for the television, scale of the issue still to be determined.
46	Interleaved circuits	As per SHTM 06-01 and note 7 on design drawings, all sockets including pendants supplies, for Cat 3, 4 and 5 should be interleaved. However, the evidence from site suggests this has not been installed.		Tied to IPS/UPS - discussions ongoing	As per SHTM 06-01 and note 7 on design drawings, all sockets including pendants supplies, for Cat 3, 4 and 5 should be interleaved. However, the evidence from site suggests this has not been installed.
<b>SED BY THE BOARD THROUGH THE REVIEW PROCEDURE</b>					
50	Access and Maintenance Strategy	Access and Maintenance Strategy - lack of clear access and maintenance strategy submitted to date. Recent RDD submission currently being reviewed by the Board.		Action with MPX	
51	Lux levels in clean utilities	Lux levels in clean utilities rooms. Currently LG2 150 lux but this is not sufficient. There is a potential this is compliant but not practical. Lighting Guide 2 suggests 150 hence it meets requirements. Suggest remove from this list.		Board to check the light levels	
52	Fire stopping	Fire stopping has been carried out but subsequent installation had breached fire stopping. Do we have any examples? It might have been caused by installation of other services once the fire stopping was formed. Nothing wrong with that assuming the fire stopping will be reinstated.		subject to building control and IT	
53	Egg crate Grilles in clinical areas	Egg box grid is not suitable for cleaning. Although compliant the Board do not believe suitable. A sample of the grid was not issued through the review procedure.		Review undertaken with MPX - Board anticipate this to be changed.	
54	Curtain track and ciling Hoist clashes	Hoists and curtain tracks clash and will need to be reviewed on a room by room basis.		MPX to resolve	
55	Wrong room configurations	G-Q1-074 not constructed in line with C-Sheet (wrong sequence for data points and socket outlets)		Closed - raise on Zutec	
56	Helipad Ramp Lights	Helipad ramp now includes lighting however HBN 15-03 recommends that the luminaire should be lower than 25 cm and pointing down toward ramp. Calculations have not been submitted for lighting levels to cannot ascertain if this complies with relevant standards.		Comment to be raised with IT	
57	Reduced access to electrical panels	Electrical panels are placed in reduced access areas. This should be designed in conjunction SHTM 00 - Best Practice for Healthcare Engineering - Chapter 9 Engineering services. Checks should be made to make sure this area aligns with Access and Maintenance strategy. Access to isolating switches poor, permanent labelling to be fitted. (4-PLANT-001 - Central AHU Plant Room 01, 3-CORE-008A - Switch cupboard)		Action with MPX	
58	Lighting in Service yard	Lighting levels within service yard have been designed at an average of 23 lux levels (i.e. the level required for a car park as per SLL Lighting Guide)		Action with MPX	
59	Lighting in B-COR-014	L14 luminaires are missing in the corridor. There is general concern that this corridor is not being constructed as per design including ceiling and door height, lighting and door access.		Action with MPX	
60	3-T2-018: QP - Riser door missing	Riser wall should have a door to access pipework.		Action with MPX	
61	Provision of 360o CCTV Coverage	As illustrated in external CCTV drawing (ME-EW-XX-PL-571-001 Rev D) there are gaps within CCTV coverage on approach to the NW elevation of the Facility. Non Compliant with BCR Clause 7.6 (n) (Hard Landscaping).		Closed	
62	Hazard classification and fire stopping in MRI suits	MRI Suits currently non functional as hazard classification in fire strategy prevents MRI equipment penetrating the 30min fire partition as they can not be fire stopped.		Discussions ongoing with WSP - Board to provide information - still outstanding issue as to who changes fire strategy	
63	Entrance to Service Yard for Large Vehicles	As witnessed at the trail on 17th Feb 2018, due to the location of the barrier, large vehicles extend into the blue light route (by Approximately 3ft) when waiting for access through the barrier.		Action with ARUP	
64	Quench Pipe Route	Project Co have not left a clear route for the quench pipes to run.		Survey to be carried out, date TBC	
65	CAMHS/PICU Glazing/DCN Acute	Project Co have not effectively designed glazing in PICU and CAMHS and DCN Acute to allow for adequate patient privacy from public spaces. As per Clinical Output Specifications and BCR Clauses 2.2/3.2.1/3.5.2/3.5.4/3.5.6/5.12/5.16.2			
66	Design Note 5 - void detection				
67	Ventilation extract for Sump and basement sump issues				
68	Security for CAHMS courtyards	Fencing currently not sufficient to prevent access to the CAHMS courtyards			
69	Service Yard Gate	MPX unable to demonstrate that the automatic gate will work and if induction loop will cause an obstruction			
70	ED Drugs store ventilation				
71	Movement Joint outstanding action				
72	Heating pumps pressure	Issue with heating pumps pressure to distribute hot water around the Facility			
73	Fridge Spaces	spaces for fridges mid unit are too small for the equipment		Asbuilt surveys need to be completed	
74	Incline in L2				
75	Row of work benches too close together - D6 first floor				
76	Pot wash ceiling, not correct - should be the same as the high spec ceiling in restaurant				

## Resolved through RDD process

1	Non-fire rated power cables to Evacuation lifts	
2	Non-fire rated Power supplies to Medical Air plant	

## Closed

1	Finish to DCN wardrobes	DCN Adult wardobes curret have white finish. This was sigend off during RDD as timber finish.	CLOSED - PCo are changing the finish
---	-------------------------	---	--------------------------------------

## Compromise list

The following list details some of the items the Board has had to / is currently considering compromising during the Construction Phase of the project. The impact of the compromise has been split into the following categories:

1. Financial  
2. Operational

Key:   Project Co Change Expected  
  Project Co Change Received

Item	Title	Reason for Compromise	Technical Solution	Description of Compromise	Impact	Consulted	Status
1	Ventilation in Single Bedrooms	Project Co's design is not in line with SHTM guidance in relation to air changes. Currently the only extract is via the ensuite, meaning this is 'dirty extract' which can't be used for heat recovery.	Single bedrooms have reduced air supply rates to maintain correct pressure regime. There is no solution proposed to provide heat recovery from the bedrooms.	Less air supply to the bedroom than recommended by SHTM and increased extract through en-suite which will affect running cost of the Facility. No ability to recover heat from en-suite dirty extract.	Operational	Ronnie Henderson Dorothy Hanley Janice Mackenzie Fiona Halcrow Janette Richards Pota Kalima Haem/onc Clinical Team	Under Review
2	Neutropenic Patients	As per SHTM and Clinical Specs, the rooms for neutropenic patients should be designed as isolation rooms (+10 positive pressure). However, there are 10 single rooms which Project Co have designed to balanced pressure.	No Solution proposed	NHS took a decision to operationally manage the department rather than asking Project Co to change the design.	Operational	Ronnie Henderson Dorothy Hanley Janice Mackenzie Fiona Halcrow Janette Richards Pota Kalima Haem/onc Clinical Team	Under Review
3	Drainage Exclusion Zone	Project Co were unable to divert drainage from certain exclusion zones requested within the BCRs.	1. Some drainage stacks still appear in the rooms. The stacks were boxed out and diverted to adjoining corridor. 2. Some redesign has taken place to divert drainage pipes which has included in some shower trays being fitted in ensuites. 3. Some rooms needed to be redesigned to accommodate drainage requirements. Note some drainage still appears in MRI rooms which has to be removed.	The Board have had to accept the following: 1. Boxed out drainage stacks - Additional pipework (bends, joints etc) potentially create weak points of the pipework where leakage may occur. More onerous maintenance regime required. 2. Shower trays in some ensuites require a different cleaning and maintenance regime. 3. Accepted changes in the layout of a small number of rooms making the layout different from same type of rooms within other department/s. 4. There are some less critical rooms where the drainage could not be re-designed.	Operational	Ronnie Henderson Janice Mackenzie Fiona Halcrow Dorothy Hanley CAMHS Lead	Ongoing review as issues arise
4	Theatre Canopy	Project Co did not provide remote air handling within the design for the canopy leading to an increase in the size of the canopies from what was reviewed by the Board during PG reviews.	No Solution proposed	Increased size of canopy in two of the RHSC theatres has resulted in a change of location of surgeon pendants meaning they are further from operating table, impacting on how theatre teams will work. The Board have also had to compromise the location of the anaesthetic pendants in other theatres and the separate monitor arms in RHSC theatres.	Operational	Patrick Macaulay Ashley Hull Fiona Halcrow All signed off by the Clinicians	Agreed
5	CAMHS intensive nursing suite external area	Project Co's Courtyard design drawings did not illustrate the covered section of the courtyard.	Project Co are currently looking at alternative screens to maximise light coming into the space and extending the size of the courtyard to allow some space that is not covered. The bricks will also be painted. There is no solution for removing the cover.	The intensive nursing suite external area in CAMHS is (unexpectedly) covered, and therefore unsuitable for use by patients without redesign as there is no part of the courtyard open to sky - The Board and Project Co have now reached a compromise and are awaiting an updated drawing and spec to confirm Project Co have proposed a solution to resolve the issue.	Operational	Janice Mackenzie Sorrel Cosens	Under Review
6	No Lift to basement in Core 3	Project Co did not construct lift core 3 to accommodate a lift access to the basement.	There is no alternative solution.	The Board had to accept the lift within core 3 will not serve the basement, however, this compromises the FM routes as it requires DCN beds to be brought down the RHSC lifts or the FM lift and reduces contingencies.	Operational	Brian Currie Jackie Sansbury Jane Campbell	Project Co Change still to be issued
7	Removal of WC (G-Q1-068)	Project Co are having to increase the size of one of the switch cupboards.	MPX request to relocate one of the switch cupboards in the radiology department to WC (G-Q1-068) to support the increase in size of switch cupboard (G-Q1-156) and the resuscitation trolley	To optimise patient safety and operational functionality the Board have agreed for the WC (G-Q1-068) to be removed to accommodate the resuscitation trolley (G-Q1-064). There will be a new arrangement for both the resuscitation and linen bay (G-Q1-063)	Operational	Janice Mackenzie Fiona Halcrow Dorothy Hanley Mike Conroy Radiology Representatives	Project Co Change still to be issued
8	Location of MRI Chillers	Project Co's original design had chillers located outside the red line boundary without legal rights to do so.	The chillers have been relocated to the roof above Department C2.	The pipe run has increased making it more expensive to install and replace and harder to maintain. It will also have an effect on the operation of the chillers by adding extra strain on the system due to the pipework's length, also requiring an additional resilience chiller. After extensive discussion on access, maintenance and replacement the solution has been proposed that includes the use of lifts.	Financial and Operational	Jackie Sansbury Dougie Coull Mike Conroy	Under Review
9	Gauss Lines in IOMRI	Project Co did not consider the Gauss lines in the original design of the room and are currently not contained within the IOMRI room	1. The lobby between MRI and OT had to be created to ensure the extend of gauss lines do not protrude to operating theatre. - suitable access for maintenance for faraday cage door. 2. Some sockets in the anaesthetic room need to be relocated as they are within the fringe field. The room will have to be re-designed, however, the implications of this are still being discussed.	1. The Board will have to change procedures within the area below and above the MRI to 'controlled access'. BYES will need to implement a procedure for this to ensure safety of their staff. 2. It reduces the size of the theatre adjacent to the MRI machine. 3. Currently unknown if the area and room redesign will work.	Operational	Jackie Sansbury Dougie Coull Mike Conroy	Under Review
10	Removal of Sprinklers	Project Co have removed the sprinklers from the Pod and Atrium to allow the proposed ATD design within the Pod to be accommodated.	Project Co's solution is to minimise the allowable fire load in the POD/Atrium area to 2.5MW.	Maximum allowable fire load strategy implemented in the POD restricting the future usage of the public space. Therefore, the Board are compromised in terms of flexible use of the space due to restrictions on the fire load including limitations on the type and size of Christmas tree.	Operational	Clive Armstrong Billie Hamilton Jim Gardner	Under Review
11	Movement Joint	Through lack of coordination between the Architects and Structural Designers, Project Co has designed the movement joint through the key exclusion zones identified in the BCR's.	Project Co are currently working on solutions including moving internal partitions so the joint falls within the partition wall and installing special seals within the clinical areas.	The maintenance and lifecycle implications are still to be confirmed with the Board but it is likely to be more onerous. Therefore, the affected rooms will likely be unavailable more often and will require more intensive cleaning regime	Financial and Operational	Brian Currie Jackie Sansbury Janice Mackenzie Fiona Halcrow Stuart Davidson Jane Campbell Janette Richards Dorothy Hanley	Project Co Change still to be issued
12	New Facility constructed at different level to the existing RIE.	Project Co used incorrect levels when constructing the facility. As a result there is a difference in level between the link building and the existing RIE.	There are 4 locations within the link building and 1 within the RIE there are steps within the floor slab and screed is having to be built up to form slopes to account for the change in level	Not best practise to have slopes within hospital corridors. Potentially more difficult to move trollies around in this area.	Operational	Brian Currie Janice Mackenzie Fiona Halcrow Jane Campbell Jackie Sansbury	Project Co Change Under Review
13	Trolley Area in the Lift lobby in Energy Centre Ground floor	The size of the trolley area was reduced by Project Co, only allowing for 5 trollies (instead of 6)	There is no solution.	The Board need to change operational procedures to account for fewer trollies which will lead to inefficiencies.	Operational	Jane Campbell Stuart Davidson Jackie Sansbury	Agreed
14	Waste Area in Service Yard	Project Co has designed the area in the service yard too small to allow the full facility to use standard clinical bins because of storage space in the service yard	No solution to reduction in size.	The Board have had to change their operational policy for bins that are now smaller, will need emptied more frequently and will need to tip smaller bins into larger. This meant that the Board needed to buy both a bin tipper and bin washer	Operational and Financial	Jane Campbell Stuart Davidson Jackie Sansbury	Agreed
15	Turning circle in Service Yard	Due to the size of the service yard and the additional requirement for a bin washer and tipper, delivery lorries do not have a full turning circle to change direction and must reverse to accommodate delivery unloading.	Delivery vehicles will need to perform reverse manoeuvre with use of a reversing assistant and timed delivery slots.	Designed solution not available, service yard to be tightly managed with software for timed deliveries to be procured and reversing assistants trained and available.	Operational	Jackie Sansbury Jane Campbell Stuart Davidson	Agreed
16	Basement Transformer Replacement	Project Co have located Transformers in the basement which makes it difficult for them to be moved as they can't be taken out via the lifts due to size and weight restrictions.	Project Co's solution includes opening a hole in the concrete slab in the lift lobby	This closes the area in the ground floor and basement area in the energy centre. Therefore the Board will not be able to use this area while the replacement is undertaken. This time period is still to be confirmed. There is no alternative so all deliveries and some FM operations will stop during this period. This has not yet been covered by the access and maintenance strategy.	Operational	Stuart Davidson	Agreed
17	Height reduction in basement areas/service yard	The height within the service yard was meant to be no less than 2400mm, however, there are areas within the service yard and basement Project Co have constructed with a reduced height of 2100mm.	There is no alternative solution.	There will be a negative affect on the atmosphere within the enclosed area of the service yard with a much more enclosed space. There is also restrictions with the movement and handling within the basement.	Operational	Ronnie Henderson Jane Campbell	Under Review
18	Vents in Courtyards (Neuroscience)	Following FC, Project Co introduced vents in some of the courtyards	Project Co are enhancing the landscaping within the affected courtyards	The Board have reduced useable space within the courtyards.	Operational	Sorrel Cosens Janice Mackenzie	Agreed
19	Odours from helipad entering RIE and RHSC clinical areas including theatres.	Project Co had not assessed the effect of helicopter emission during the design of the helipad. Project Co then revised the design and lowered the helipad which may have worsened the situation.	Project Co are still to propose a solution to manage the emissions.	unknown until Project Co confirm their solution.	Operational	Brian Currie Jackie Sansbury Janice Mackenzie Fiona Halcrow Stuart Davidson	Project Co Change still to be issued
20	Foul Pump at Kitchen Door in the basement	Project Co's foul drainage design in the basement locates the pump within the corridor outside the kitchen area. This has the potential to create a uncomfortable odours in an area where food is being prepared and a frequent thoroughfare to those using the basement.	There is no solution proposed by Project Co but design must be HAI scribe compliant.	Maintenance of the pump will close off this section of the corridor and affect FM activities. On a more general note staff will potentially have to work in an uncomfortable odour that again affects the overall atmosphere of the basement working environment.	Operational	Stuart Davidson Jane Campbell	Agreed
21	no concealed grid for ceilings	Project Co changed the ceiling grid and tile specification and installation of same without consultation with Board after original specification has been reviewed as RDD.	In all areas of suspended ceiling with the exception of the kitchen, revised spec with exposed grid and Bio guard Acoustic tiles is being installed.	Board presented with a fait accompli when rooms presented for review. The compromise is an aesthetic issue.	-	Janice Mackenzie Fiona Halcrow	Awaiting Project Co Change
22	Lift Size too small for Angio Installation and Replacement	The lifts within the facility are too small to allow installation and replacement of Angio Equipment	An access door has been constructed in the 1st floor of link building and angio will need craned/raised into position from a platform.	This procedure will cost more and will introduce restriction in the area.	Financial	Stuart Davidson Jackie Sansbury	Agreed
23	Attenuation system under car parks	Project Co have not provided disabled parking signs at the end of each individual disable space as required in the British Standards	No solution as Project Co advise that the attenuation system under the car park stops foundations being constructed at the parking bays and the reference does not meet British Standards.	Against best practice and not consistent across Campus site.	Operational	Jackie Sansbury Stuart Davidson Steven Alderson	Agreed

24	Access to fire dampers	Project Co has located fire dampers in a position obstructed by services making them difficult to access.	Project Co are re-designing access to fire dampers	Due to the location of some fire dampers the access will take considerable amount of time to re-set following annual drop tests or in the event of actual alarm.	Operational	Ronnie Henderson	Project Co Change Under Review
25	Parents Beds	Project Co's original parent bed design did not allow enough circulation space to get to the patient or on the other side of the bed to clean and make up the bed	The bed has been made smaller	The Parent bed may be too small for some parents and therefore they may not be able to sleep comfortably beside their child.	Operational	Janice Mackenzie Fiona Halcrow Dorothy Hanley Jackie Sansbury Jane Campbell RHSC Nursing Team Reps	Agreed
26	Neuroscience Courtyard						
27	Inconsistencies between Design and Construction	The Board are finding a lot of instances where items have been constructed / fitted in the wrong space. For example: 1. BMS control (BMS999) and Cleaner sockets (OUT005s) are not where they are illustrated on the drawings. 2. Cupboard in the wrong place in Sphere 3. In Sphere an observation window was higher than designed.	In order to minimise impact or reworks the Board take a view at the time the issue is raised whether the mistake needs to be corrected by Project Co.	The Board considered that some mistakes could be accommodated with some having no impact and others needing slight changes to operational procedures.	Operational	Janice Mackenzie Fiona Halcrow Dorothy Hanley	Under Review
28	Entrance Matting	Project Co did not provide entrance matting at all doors to external areas however, it is not possible to change the floor slab to incorporate recessed floor mats in all areas.	Project Co have provided several different details including: 1. Fixed but raised matting 2. Locating recessed mats outside 3. Board supplying some mats as group 3 that can be removed when not needed.	The Board are having to provide some mats as group 3.	Operational and Financial	Jackie Sansbury Jane Campbell Stuart Davidson	Agreed
29	Restricted delivery times to service yard	Project Co agreed restricted working times with the Council so deliveries can only be made to the service yard between 7am and 11pm	No Solution	The Board are having to review operational procedures.	Operational and Financial	Jackie sansbury	-
30	Single room and en-suite room door clashes	Door hangings resulted in clashes in a small number of single rooms with ensuites	Double hinged swing door to be installed in the ensuite	When both leafs of the door are required to be open the door will be more cumbersome for staff to use.	Operational	Fiona Halcrow Janice Mackenzie Jackie Sansbury	Agreed
31	Service Yard gate access width	Access to the gate is not wide enough for two vehicles to pass at the same time	No solution proposed as yet.	Management of the service yard would need to be closely monitored to prevent vehicles clashing while entering and exiting the service yard			
32	Service Yard manholes	SW manholes are elevated in the service yard	No solution proposed as yet.	tbc			
33	General x-ray G-Q1-012	An area of the ceiling above G-Q1-012 is extremely congested.	To install the unistrut ceiling in the general x-ray Project Co need to avoid the last 1.05m of the room. This would enable the ceiling height of 3100mm to be maintained throughout this room.	tbc			
34	CLAH Autoclave	The autoclave could not be accommodated in original position	Relocate autoclave in the original position of the whb.	Within the tissue culture store a wash hand basin and associated equipment was removed. Wall moved.	Operational	Fiona Halcrow Jackie Sansbury Paul Fitch (UoE)	
35	Bedhead trunking in RHCYP & DCN bedrooms and 4 bedded bays	As part of the RDD process we had discussion with Mercury that the 'treatment' side i.e the gasses and suction outlets would always be nearest to the door side which would ensure a consistent approach across the facility. However this has not universally happened in all areas which means that there are instances where the medirail and suction catheter holder are now not in the correct location. All of the bedhead trunking has been manufactured and many have already been installed so it is not possible to change this at this late stage	Where the bedhead trunking does not have the gasses and suction outlets nearest to the door and the medirail and catheter holder is now not in correct location they will need to be moved. We have agreed with MPX that where the medirail is in the incorrect position they will install an additional medirail in the correct position. The requirement for moving the catheter holder will be assessed. The locations of the medirail and catheter rack will be assessed on an individual basis and feedback provided to MPX	In a proportion of single bedrooms and 4 bedded bays the gasses and suction outlets will not be on the door side so there will not be uniformity in layout and the oxygen outlets will not always be the first outlet nearest to the door. Ward clinical staff will need to be aware of this and this will be picked up as part of their local familiarisation.	operational	Janice Mackenzie Fiona Halcrow Dorothy Hanley David Stillie Ronnie Henderson	
	Lack of required signage due to attenuation system under car parks						
36	Temperature Control Valves	Project Co have not provided electronically actuated valves to individual radiant panels that allows BMS control of temperature.	Thermostats are located in each room that allow slight changes to localised room temperature	The Board could not incorporate temperature control into enhancements to the patient bedside environment	-	Ronnie Henderson Janice Mackenzie Fiona Halcrow Sorrel Cosens	

Project Technical Completion Schedule													
Revision 1		Date 05-Apr-18 Author - Liane Edwards-Scott											
Principals Issue	Ref	Item	Title	Description	Latest Agreed Action 04/04/18 or CLOSE OUT Statement	Status	Owner					Final Close Out Action	
							MPX	NHSL	IHSL	BYES	IT		
	PTC	1	Lighting in fire fighting stairwells	The lighting within the 7 fire fighting shafts / stairwells and associated lobby has been installed with single circuit from the local lighting distribution boards that are not supplied by the fire rated cables.  The Board believes all fire fighting stairwells should be supported by a primary and secondary fire rated power	Additional confirmatiuon sent back to IT. Await IT to respond and conclude compliance.	IMMINENT	CG	RH				YES	
	PTC	2	Non Fire Rated IPS / UPS cabling	For compliance with BS 7671 and Guidance Note 7, and also BS 8519 circuits associated with essential life-support services should be either fire-rated or fire-protected. The implication of this is, in the event of a fire, power may be lost to essential life safety medical equipment in critical areas.  Project Co's has installed non fire rated cables to IPS boards serving critical areas.	MPX to issue technical solution reflection outcome of workshops. NHSL to 'Speedy RDD'.	OPEN	KH	RH					
	PTC	3	No earth bonding in certain required areas.	No equipotential bonding has been installed 144 Group 1&2 rooms. Equipotential bonding is required to prevent electric shock to patients, staff and visitors.  A sample room has been offered by Project Co to the Board for witnessing indicating installation of equipotential bonding boxes. The Board understands this will now be installed in all 144 Group 1&2 rooms.		CLOSED	CG	RH					MPX confirmed to NHSL all works are complete following meeting. NHSL to review sample locations onsite to close out.
	PTC	4	Bedroom ventilation pressure regime and air change rate in rooms for neutropenic patients	Neutropenic Patients - As per SHTM and Clinical Specs, the rooms for neutropenic patients should be designed as isolation rooms (+10 positive pressure). However, there are 10 single rooms which Project Co have designed to balanced pressure.	NHSL to draft proposed wording for MPX review and incorporation into change.	OPEN	LE	JS					
	PTC	5	25% spare capacity	The 25% spare capacity should be provided by Project Co in terms of main and sub main distribution containment, UPS boards, AHU, physical space in voids and ceilings, risers.  Its apparent from site visits, the spare capacity has not been provided.	Report and updated statement to be reissued for NHSL review (completion criteria not RDD)	OPEN	KH	RH					
YES	PTC	6	HV distribution	In relation to system resilience, the Board believes Project Co's design for HV Distribution is non-compliant with the Board's Construction Requirements (BCR's), Project Co Proposal's (PCP's) and SHTM Guidance for the following elements; 1. Resilience of the HV main intake switch room, 2. HV cable distribution, 3. HV / LV substations.  The Board believes the design currently creates single points of failure at the HV side of the electrical distribution network.	IT has confirmed compliance. Electrical workshop to take place next week. NHSL to propose date.	OPEN	CG DP	RH BC					
YES	PTC	7	4 bed ventilation	In relation to ventilation pressure regimes, the Board believes Project Co's design for ventilation is non-compliant with the Board's Construction Requirements (BCRs), Project Co Proposal's (PCPs), SHTM Guidance and RDD FC comments.  In addition, the Board believe the intake air change rate and the extract air change rate are non-compliant.  From a clinical perspective, the principal concern to the Board in continuing with Project Co's proposed pressure regime design means there is an unacceptable risk of the spread of bacterial airborne infections into corridors and surrounding patient rooms (positive to the corridor)  The Board requires the pressure regime to be balanced or negative to the corridor.	14 rooms at 4 a/c confirmed. Room numbers to be confirmed and updated on drawings. Issued to NHSL for comment	OPEN	CG	BC					
	PTC	8	Bedhead trunking earth bonding points	All bedhead trunking installed in Group 2 Medical Locations is provided with only 2 supplementary equipotential bonding points. This is not in compliance with GN7, which requires minimum 4 for medical IT sockets (IPS sockets).	Drawings to be resubmitted this week for 'speedy' RDD.	IMMINENT	CG	RH					
	PTC	9	Lack of non IPS sockets in theatres	All sockets outlets within these departments except for Cleaners outlets and a limited number of "raw power" sockets in some areas, are Medical Equipment blue sockets. No provision has been made for equipment that should be plugged into an RCB protected outlet whilst in the patient zone.  Also, no x ray sockets (dedicated socket).	Drawings to be resubmitted this week for 'speedy' RDD.	IMMINENT	CG	RH					
	PTC	10	Drainage above IPS rooms / above IPS panels	PCo have installed drainage above exclusion zones, electrical equipment and other high risk locations except above MRI rooms where this has been completely removed.	Drawings to be resubmitted this week for 'speedy' RDD.	IMMINENT	CG	RH					
YES	PTC	11	Cable discrimination and cable calculations (electrical issue)	Project Co has not submitted cable calculations through RDD for Board's review. This is required as per 4.23 2 (Mechanical & Electrical Specification) Project Co Proposal. The Concern is that the selection, grouping, rating and fault levels of cables is inappropriate and non-compliant with BS 7671.  As evidenced on site, there are several instances of cables being double and triple banked, as well as being grouped tightly together.	Workshop to take place 05/04/18. Outcome to be reported.	OPEN	CG	RH					
	PTC	12	Lack of tamper proof flush fitted sockets in CAMHs	Sockets not installed as per small power layout drawings. i.e. flush fitted tamper proof sockets.	Technical solution agreed.	CLOSED							Outstanding on site actions to be raised in Monday meeting
	PTC	13	Single Bedroom Ventilation air changes	Air change rates proposed by Project Co for single bedrooms are not in compliance with SHTM 03-01 and Board's comments. 4ac/h supply provided to the bedrooms instead of the required 6ac/h. The ensuite extract rate proposed in excess of 10ac/h where requirements of SHTM 03-01 is 3ac/h.	Technical solution agreed at 4a/c. Change wording to be concluded (via change list)	CLOSED	LE	JM					LE to resubmit change wording

PTC	14	Smoke clearance in fire fighting stairwells	As per the Non Domestic Technical Handbook and project specific Fire Strategy, all fire fighting stairwells shall be provided with appropriate ventilation for heat and smoke control. Currently only a percentage of stairwells appear to have openings for high level ventilator. No details of electrical connections including fire rated cables for fire fighting plant as per BS 8519.	MPX to issue status update confirming compliant solution.	IMMINENT	LE	RH						
PTC	15	Access hatches	Proliferation of Access hatches have been installed within theatre suites which is non-compliant with BCR clause 8.14 Service Routes and "Good Industry Practice".	Technical solution agreed. Any onsite observations to be concluded via Monday meeting or via Zutec	CLOSED								
PTC	16	Reductions to ceiling heights	In addition to the Project Co Change 016 (Basement Ceiling Heights), further Height reduction in basement areas/service yard appear to have been reduced 2100 without the agreement of the Board.	Board confirmed no further comment 31.01.2018.	CLOSED								
PTC	17	Duct Cleaning	Duct cleaning - SHTM states all ducts must be cleaned unless they have been protected. MPX not proposing to clean all ducts as believe they have sufficiently protected the ducts following installation. IT advised MPX will have to do a check to confirm ducts aren't dirty	Meeting set up with MPX & NHLS 5th April 2018 to agree scope.	OPEN	CG	RH						
PTC	18	Number of lift stops	Number of lift stops - BCR 8.8.11 - "RHSC Lifts should not stop at DCN floors, and DCN lifts should not stop at RHSC floors". Board in agreement with the Project Co change, however change required to clarify.	Change submitted and wording to be agreed. This is on the change list so closed on this list.	CLOSED								
PTC	19	Helipad fire fighting system (Water Pressure)	Helipad fire fighting system does not comply with the guidance of HBN 15-03 Hospital Helipads clause 5.22. There does not appear to be a pressurised main supply, nor is there a system of inert gas to pressurise the system.	MPX have previously responded and will re-issue response. NHSL to review their position as CAA have signed off.	OPEN	CG	RH						
PTC	20	Vegetation around air intakes in Neuroscience Courtyard	Landscape design around intake vents in Neuroscience Courtyard is potential non-compliant with SHTM 03-01 which states:  Air Intake 1.42 An uncontaminated air supply to the system is essential. In order to achieve this, the air intake will be positioned so that air discharged from extract systems or other dubious sources cannot be drawn in. Exhaust fumes from vehicles can present particular problems. The area surrounding the intake will need to be kept clean and free of vegetation and waste material in order to reduce the possibility of biohazards or fire. The intake itself will be protected by a louvre and mesh screen to prevent rainwater, vermin and insects etc from entering the system.	CCP 053 issued. On change list so closed here.	CLOSED								
PTC	21	"Do not use" labels removed from Medical Gas Outlets before commissioning.	Medical gas outlet "Do Not Use" labels removed before commissioning, non compliance with SHTM02-01.	MPX rectifying. Technically closed.	CLOSED								
PTC	22	Isolation Room supply ventilation relative to low building.	Isolation room ventilation is non-compliant for a 'low' building. There should be a separate supply and a contractors change will be needed.	IT to confirm compliance	OPEN	CG					YES		
PTC	23	Drainage joints in slabs	Drainage outlets - Drainage joints have been installed in the slab between floors with no access for maintenance or repair. This means there is no manufacturer warranty for the drainage connection.	IT to confirm compliance	OPEN	CG					YES		
PTC	24	Fire Collar installation	Fire collars for drainage are not directly connected to the slab+C19	IT to confirm compliance	OPEN	CG					YES		
PTC	25	Level and position of smoke detectors	Smoke detectors mounted at low levels above the ceiling i.e. not installed at the heights specified for void detectors	Technical solution agreed. Any onsite observations to be concluded via Monday meeting or via Zutec	CLOSED								
PTC	26	Ventilation in IPS	ventilation in IPS - PCo have shown 3ac/h extract ventilation in the EM but not all - Potential heat gain issue.	Technical solution agreed. Any onsite observations to be concluded via Monday meeting or via Zutec	CLOSED								
PTC	27	Hot and Cold water supply pipe configuration	Hot and cold water supply pipes are crossed behind the sink in some rooms and in some instances the cold pipe is above the hot water pipe or touching the pipe meaning the will be heat transferred to the cold water supply. Not best practice and non compliance with SHTM 04-01	IT to confirm compliance	OPEN	CG					YES		
PTC	28	Windows/Partition in 1-B1-055	The GA and C sheet illustrates a 3 panel window however, in construction one panel appears to be 'false' with a partition behind it. From the inside it appears to be only 2 windows.	Board confirmed no further comment 31.01.2018.	CLOSED								
PTC	29	Mounting heights for clinical lights	The heights clinical lights have been mounted at cause and obstruction	MPX have altered on site	CLOSED								
PTC	30	Lightning Protection	Potentially deviated form design agreed with Consort	MPX installed per original submission	CLOSED								
PTC	31	Gas supply to bedhead trunking	Supply has not been installed on site as per Board comments during RDD process.	MPX have rectified on site	CLOSED								
PTC	32	Concealed ceiling grids	Ceiling Grids are not concealed and not constructed in line with RDD drawings	Board to review CCP 033 and confirm any further issues.	OPEN								
PTC	33	Soft Landscaping planting specification	Planting on site not as per planting schedule. i.e. clematis appears to be climbing but should be bush/ground variety		OPEN								
PTC	34	Wrong terminators fitted in warning lights	Warning Lights: - Terminal strip connector in theatres to be removed and correct terminations provided, all warning light boxes. - light box deformed where glanded	NHSL have raised on zutec. Not required on this list.	CLOSED								
PTC	35	No evidence of IPS circuit bonding conductors	No evidence of IPS circuit bonding conductors at the IPS cabinets. The Main Bonding conductor between the IPS & the ERB is present.	Board confirmed no further comment 31.01.2018.	CLOSED								
PTC	36	Fire resistance of radiology door frame	Radiology: Door frame packed out in door opening, not in accordance within manufacturer's limits to maintain fire resistance of doorset.	Board confirmed no further comment 31.01.2018.	CLOSED								
PTC	37	UPS output switchboard with incorrect poles	UPS output Switchboard 2 Switchboard is supposedly a Form 4 type 6 board. Schneider state that to achieve Form 4 type 2 or 6 that the incoming devices should be 4 poles. The incoming devices are three poles with un switched neutral.	The switch disconnctors for supply A&B are 4 pole as detailed on Schneider drawing on Zutec 3DE/52853	OPEN	CG	RH						
PTC	38	Corridor service door handles	Corridor service doors - installed pull handles are not acceptable as advised by the board 30/01/17 (MM-GC-002483) during room review (corners of handles at childrens head height)	MPX rectified on site.	CLOSED								
PTC	39	Outstanding Status C RDD	Numerous outstanding RDD	NHSL to issue list of stat Cs for MEP. Arch and Structural numbers of stat C's agreed.	OPEN	CG	LE	KK					
PTC	40	Remaining Permanent Infrastructure outside the red line boundary (CCTV etc)	Still waiting for legal agreement for infrastructure outside the site boundary.	SA1 progressing.	OPEN				WW				
PTC	41	Seasonal Commissioning	Potential for some seasonal commissioning tests to be complete post hand over.	Closed here as exists on change list for closure there.	MOVED								
PTC	42	Environmental Matrix	EM reflects M&E issues currently considered non compliant	Closed here as any updates will come from outcome of other issues such as 4 bed bays.	CLOSED								
PTC	43	Routing of services. Corridor layouts against any non compliance with standards to be tabled.	services are currently running through clinical areas that were not included within the original Project Co derogation.	NHSL to identify areas where they believe further non-compliance. Change to be updated?	OPEN	LE	KK						
PTC	44	Nurse call in WC	There is evidence from the site (room C1.1-070) that nurse call pull cords have been installed in some visitor's WCs. However no nurse call should be installed in visitor's WCs.	All agreed to raise in Monday meetings. Closed in this forum.	MOVED								
PTC	45	Unidentified Circuits	Electrical circuits are not identified or labelled at terminal rail inside trunking. Consequently, there is no way to identify which cables enter and leave the circuit terminal strips.	MPX rectified on site.	CLOSED								
PTC	46	Fire alarm cable bands	Cable bands for fire alarms are plastic rather than metal. Metal ties are required by BS and are proposed by Project Co M&E specifications (4.23 3 of Section 4 of Schedule Part 6).	MPX rectified on site.	CLOSED								
PTC	47	IPS units earthbar termination - 1-B1-044 - IPS Room			CLOSED								
PTC	48	IPS sockets supplying non medical equipment	IPS socket found on site providing power for the television, scale of the issue still to be determined.		CLOSED

**Importance:** High

Matt

As just discussed, please find attached our wip half of the technical schedule. The RAG tracker is the current status of information available, as we see it.

A combined MPX/NHSL version will be developed next week and forwarded to you.

Regards

Brian

Programme

**Importance:** High

My notes from yesterday's meeting below which I have shared with colleagues.

Actions should be self explanatory however we will need to prioritise resource to deal with them given the time scale pressures.

I have asked Ronnie to review MPX mark up with Kamil today (when received) as Ronnie is on leave next week.

Another play for the team though. We need to gather together all documents and thoughts we have collectively on compromises, residual risks we have made to date and extract from this what issues we could theoretically categorise as a dispute (potentially take to DRP/ Court).

I will explain more but stress this is a theoretical exercise and is linked to satisfying State Aid criteria. IHSL are seemingly to do the same from their side (listing what issues they could have with us and take to DRP/Court). We then need to price the cost of these issues and then risk assess and conclude that it is better value for money to the taxpayer to settle these out with DRP/ Court.

Regards

Brian

**To:** Crombie, Jim; Goldsmith, Susan  
**Cc:** Graham, Iain; Pryor, Michael  
**Subject:** RHSC + DCN - Little France - Commercial Agreement - Tech Schedule/Access Protocol/ Programme  
**Importance:** High

My notes from a meeting with IHSL (Matt Templeton and Wallace Weir) and MPX (Darren Pike and Colin Grindlay) yesterday afternoon:

### **Technical Schedule**

I suggested that allocating one of the four following criteria (established PA mechanisms) might be an approach to defining accurately and providing verifiable evidence to each of the 81 items particularly as a number of the items were already categorised as such:

- 1 PCo Change
- 2 Board Change
- 3 RDD (Status A or B)
- 4 As per Completion Criteria)

This was rejected as unworkable by IHSL given the timescales to conclude the "settlement" and that there can be no further recourse to other documents not accepted by either party at the time of settlement.

IHSL explained that the "settlement" is a SA to the PA and as such stands alone and not subject to other agreements.

All parties discussed in detail each line item with remaining actions on MPX to continue to populate item description and outcome installed with NHSL populating evidence of such.

It is hoped that MPX and NHSL will conclude this in the early part of next week. IHSL stressed that it is imperative that both parties achieve this.

### **Access Protocol (during enhanced early access period pre completion)**

MPX are to document all discussions had with NHSL over last 4 weeks and share with NHSL on Monday next week for their input.

### **Programme**

MPX and NHSL to identify key milestones and document early next week.

Regards

Brian

**To:** Currie, Brian [REDACTED]  
**Cc:** Peace, Richard  
**Subject:** RE: RHSC + DCN - Little France - Commercial Agreement - Tech Schedule/Access Protocol/ Programme

Brian,

Further to your emails below, a few additional thoughts from last Thursday meeting with IHSL.

The main comment of concern from the meeting were those from IHSL requesting that “the Board to confirm that all BCR clauses have been met” and also comments that I think implied there can be no recourse for the Board once the settlement agreement has been signed.

I think the intentions from IHSL were constructive (we all just wanted to close the technical issues), and I think we are all agreed that “all items are to be defined with precision”, however the comment about the BCRs is concerning. As you have described in your email, in effect we had thought the process would conclude in the Board removing any further objections to the design solutions proposed and recorded via one of the mechanisms already established in the Contract.

The risk allocation set out in Clause 12 of the PA is clear, and I am concerned that if the Board agreed to write the above BCR statements, it could significantly alter the PA risk allocation in IHSL’s favour. Furthermore, I don’t think the Board is in a position to fully confirm compliance with the BCRs, the burden of responsibility should always remain with Project Co. As we are not the designers, Mott MacDonald would not be in a position to provide that design assurance to NHSL.

If we were to take the HV example, if the Board were to state – “The Board confirm that all BCR clauses relevant to the HV design have been met”, I think this goes beyond our level of design understanding (bearing in mind the Board and MM are only reviewing the design outputs) and also the current risk allocation in Clause 12.

We are concerned that the consequence of this HV statement could be the following;

- The Board are effectively taking on Design Responsibility for all elements of the HV design, and removing all liability from IHSL and their contractors / designers,
- If there are any other design issues in the HV system that have not previously been disclosed to the Board, the Board may be required to issue a Board Change to fix them,
- If for example in the main intake switch room, there was failure that led to no power to the Facility, and this was tracked back to a flawed design, the Board could be liable for any repairs and potentially could not apply deductions, however more importantly the Facility would be without power and no contractual mechanism to resolve.

Hopefully our understanding of this could be clarified with a quick discussion with the legal team (4.30 today), particularly how the settlement agreement interacts with the PA? Or is it possible that we have misinterpreted some of the subtlety of IHSL’s statements during the meeting?

Hope the above is helpful,

Kind Regards  
Graeme

RHSC + DCN

**Schedule Part 01 - Technical Schedule to the Settlement Agreement**

**WITHOUT PREJUDICE**

**17 July 2018 - Rev 01**

Note: Given that the technical schedule does not expressly set out all necessary amendments to the Project Agreement, Clause 7.1 of the PA Settlement Agreement will require adjustment as follows:

“7.1 The Parties agree that in order to give effect to this Agreement, the provisions of the Project Agreement and other documents referred to in Part [ ] of the Schedule shall be:

(a) supplemented and amended as set out in Part [ ] of the Schedule; and/ or

(b) (where no express supplement or amendment is set out in Part [ ] of the Schedule) deemed to have been supplemented and amended in order to give effect to the agreed resolution set out in the [third column] of Part [ ] of the Schedule;

with effect from the date of this Agreement.

The Parties agree that all such supplements and amendments as set out in this Agreement:

(a) shall, in the event of any inconsistency with the provisions of the Project Agreement or other document referred to in Part [ ] of the Schedule, take precedence over the Project Agreement or other such document; and

(b) shall be deemed to have been agreed in accordance with the Project Agreement, and that the entry into of this Agreement shall not constitute a breach by either Party of the Project Agreement.”

Re m	Dispute	Description of Agreed Resolution
1	<p><del>Emergency / Firefighting</del> lighting in fire fighting stairwells</p> <p>The Board believes Project Co have designated the 7 fire fighting shafts / stairwells for Emergency Evacuation as well as Fire Fighting. The Board believes this is confirmed in Project Co's Fire Strategy and MPX-FC1-002374.</p> <p>From a fire fighting perspective, the Board believes that as well as providing lighting for emergency evacuation, lighting is also required for life safety and fire fighting applications in accordance with BS 7671 and BS 5819. Project Co have not provided this lighting. The light within the 7 fire fighting shafts / stairwells of associated lobby has been installed with the exception of the lowest fire-rated lobby that is not supplied by the fire-rated cables.</p> <p>The Board believes that the 7 fire fighting shafts / stairwells should be supported by emergency and secondary fire-rated power supplies from the central fire-rated boards and external emergency fire-rated power supplies.</p> <p>Project Co's position is that the design and installation of the emergency lighting within the 7 fire fighting shaft / stairwells meets the requirements of the Project Agreement and was based on the package approved through Schedule Part 8 (Review Procedure).</p> <p>Each party disagrees with the other party's position and therefore a dispute has arisen.</p>	<p>Project Co to procure approval to their proposal for the emergency lighting in the 7 fire fighting shafts/stairwells from the Building Control Officer, Scottish Fire and Rescue and the Independent Tester and Project Co will address any compliance requirements from the Building Control Officer, Scottish Fire and Rescue and the Independent Tester in accordance with the Project Agreement.</p> <p>Proposal and approval all as specified in [MPX-GC-027173] Aconex chain of correspondence as set out in Schedule <del>insert schedule reference attaching all Aconex documentation</del>.</p> <p><del>For the avoidance of doubt, Project Co will be responsible for implementing and meeting all costs incurred in relation to any lighting requirements which are specified by Building Control or Scottish Fire and Rescue Service or the Independent Tester relative to life safety and fire fighting applications and the requirements of BS 7671 and BS 5819.</del></p> <p><del>Board awaiting issue of correspondence from Project Co</del></p>
2	<p><del>Non Fire rated</del> UPS / UPS cabling</p> <p>For compliance with BS 7671 and Guidance Note 7, and also BS 5819 circuits associated with essential life-support services should be either fire-rated or fire-protected. The implication of this is, in the event of a fire, power may be lost to essential life safety medical equipment in critical areas.</p> <p>The Board believes that Project Co has installed non fire rated cables to UPS boards serving critical areas.</p>	<p>The agreed resolution of the Dispute submitted by Project Co through the Schedule Part 8 (Review Procedure) and agreed by the Board is set out below and has been given status Level A or Level B.</p> <p>Following a collaborative review of the design between the Board and Project Co, Project Co made changes to 11 Number sub mains cables from UPS switchboard to UPS distribution boards changing these to fire rated.</p>

Re m	Dispute	Description of Agreed Resolution
	<p>Project Co's position is that the design and installation meets the requirements of the Project Agreement and was based on the package approved through Schedule Part 8 (Review Procedure).</p> <p>The Reviewable Design Data list of documents was agreed at Financial Close, and there is no requirement to submit cable calculations through Schedule Part 8 (Review Procedure).</p> <p>Each party disagrees with the other party's position and therefore a dispute has arisen.</p>	<p>Project Co to answer the above four questions and any resulting areas of concern to be analysed and dealt with on an individual basis</p>
12	<p><b>Lack of tamper proof flush fitted sockets in CAMHS</b></p> <p>In the Board's opinion, sockets are not installed as per small power layout drawings. I.e. flush fitted tamper proof sockets.</p> <p>Project Co's position is that the design and installation meets the requirements of the Project Agreement and was based on the technical sub package approved through Schedule Part 8 (Review Procedure).</p> <p>Each party disagrees with the other party's position and therefore a dispute has arisen.</p>	<p>The resolution of the Dispute agreed by the Board and Project Co was for plastic faceplates to be replaced with metal flush fitted tamperproof sockets.</p> <p>In addition to the above, the Board issued Board Charge 137 - CAMHS Anti-Lig M&amp;E and Fixtures.pdf. as set out in [insert schedule reference] for additional requirements.</p>
13	<p><b>Single Bedroom Ventilation air changes</b></p> <p>In relation to ventilation air change rates, the Board believes Project Co's design for the single bed ventilation is non-compliant with the Board's Construction Requirements ("BCRs"), Project Co Proposal's ("PCPs"), SHTM Guidance, and also non compliant with comments made by the Board on the Environmental Matrix in the Reviewable Design Data schedule at Financial Close. 4ac/h supply provided to the bedrooms instead of the required 6ac/h. The ensuite extract rate proposed in excess of 10ac/h where requirements of SHTM 03-01 is 3ac/h.</p> <p>The Board also notes the Environmental Matrix was altered during Preferred Bidder to Financial Close period and was therefore not a direct copy of the reference design environmental matrix.</p>	<p>The Board / Project Co agree this item is closed, and the agreed technical solution, approved through Schedule Part 8 (Review Procedure) and, agreed by the Board and Project Co as resolving the Dispute is as set out in [insert schedule reference].</p> <p>Project Co to Issue document for the Boards review</p>

Re m	Dispute	Description of Agreed Resolution
	<p>Project Co's position is that the design and installation meets the requirements of the Project Agreement and was based on the package approved through Schedule Part 8 (Review Procedure) which included the environmental matrix which had been discussed and agreed pre Financial Close.</p> <p>The environmental matrix was a direct copy of the reference design environmental matrix developed during the preferred bidder period.</p> <p>Comments were received pre Financial Close and these were documented and the design amended to reflect the Board's comments.</p> <p>Each party disagrees with the other party's position and therefore a dispute has arisen.</p>	
14	<p><b>Smoke clearance in fire fighting stairwells</b></p> <p>As per the Non Domestic Technical Handbook and project specific Fire Strategy, all fire fighting stairwells shall be provided with appropriate ventilation for heat and smoke control. Currently only a percentage of stairwells appear to have openings for high level ventilator. No details of electrical connections including fire rated cables for fire fighting plant as per BS 6519 have been provided.</p> <p>Project Co do not dispute the Board's position.</p>	<p>The remote activation and minimum free area opening is as noted in MPX.GC.026280:</p> <p>"In line with clause 2.14.6 (and table 2.16) of the NDTH, each of the stairs are designed with a mix of 'ventilators' achieving 1sqm ea. to the top of the stair (either smoke vents or windows). The strategy to each stair is noted below:</p> <ul style="list-style-type: none"> <li>• Stair 1 – Openable window to stair (1sqm window to top of stair) CHSL</li> <li>• Stair 2 – Openable window to stair (1sqm window to top of stair), mechanical ventilation to the bed evac lobby. Push buttons to topmost storey and access level as per 2.14.6 CHSL</li> <li>• Stair 3 – Openable (mechanical) roof vent to stair, mechanical ventilation to the bed evac lobby. Push buttons to topmost storey and access level as per 2.14.6</li> <li>• Stair 4 – Openable (mechanical) roof vent to stair, Push buttons to topmost storey and access level as per 2.14.6</li> <li>• Stair 5 – Openable window to stair (window at each level, however topmost floor window to have local automated actuator allowing the window to open under actuation to achieve 1m2) Velfac</li> <li>• Stair 6 – Openable window to stair (window at each level, however topmost floor window to have local automated actuator allowing the window to open under actuation to achieve 1m2) Velfac</li> <li>• Stair 7 – Openable (mechanical) vent to stair- exhausts via plant room area at 104. Push buttons to topmost storey and access level as per 2.14.6</li> </ul>

Re m	Dispute	Description of Agreed Resolution
		<p>In order to comply with section of 5.12 of the BCRs, all opening windows (including those to stairs 1, 2, 5 and 6) are lockable and fitted with restrictors.</p> <p>The CHSL Schuco Windows are provided with 'Custodian Handle Housings' with 'Custodian Keys' as per CHSL Technical Submittal no. 13 allowing the windows to the top of stairs 1 and 2 to open fully and achieve in excess of the min 1sqm requirement of the building regulations.</p> <p>The Velfac WT-022 windows to stairs 5 and 6 are provided with 'Espagnolette handle with Lock' with 'Allen Key Lockable Restrictor'. The topmost window in each stair is to be fitted with localised actuation. This only allows opening by operatives as the locks and restrictors must be omitted. The actuators shall be activated locally by button control at 2m above floor level so as not easily accessible to public. This is in accordance with NDTM 2.14.6.</p> <p>The fire service carry the tool required to operate the CHSL windows and the key shall also be stored in a secure location near the windows ie break glass.</p> <p>All as noted within Aconex MPX-GC-026280, MM-GC-003950 and MPX-GC-026538 as set out in Schedule [insert schedule reference attaching all Aconex documentation] the above actions are agreed by the Board and Project Co to resolve this Dispute.</p>
15	<p><b>Access hatches:</b></p> <p>It is the Board's position that a proliferation of Access hatches has been installed within theatre suites which is non-compliant with BCR clause 8.14 Service Routes and "Good Industry Practice".</p> <p>Project Co's position is that the design and installation meets the requirements of the Project Agreement and was based on the package approved through Schedule Part 8 (Review Procedure).</p> <p>Each party disagrees with the other party's position and therefore a dispute has arisen.</p>	<p>Project Co agreed to the reduction of hatches in theatres, as noted within Aconex MPX-GC-027183 and as set out in Schedule [insert schedule reference attaching all Aconex documentation]. This will be reflected in the as-built documentation.</p> <p>Updated versions of the following Reflected ceiling to be included in the As Built: HLM-23-01-PL-332-410;411;412;413.</p>
16	<p><b>Reductions to ceiling heights:</b></p> <p>In addition to the Project Co Change 016 (Basement Ceiling Heights), further Height reduction in Room Number 4-COR-007 and Room Number G-A1-062 appears to have been reduced without the agreement of the Board.</p> <p>Project Co do not dispute the Board's position.</p>	<p>The Board / Project Co agree this item is closed, and the agreed technical solution approved through Schedule Part 8 (Review Procedure) and, agreed by the Board and Project Co as resolving the Dispute is as set out in [insert Schedule reference].</p> <p>Project Co to issue document for the Boards review</p>

Re m	Dispute	Description of Agreed Resolution
17	<p><b>Duct Cleaning</b></p> <p>The Board's position is that SHTM states all ducts must be cleaned unless they have been protected.</p> <p>The Contractor is not proposing to clean all ducts as believe they have sufficiently protected the ducts following installation.</p> <p>Independent Tester advised the Contractor will have to do a check to confirm ducts aren't dirty</p> <p>Project Co's position is that ducts were being protected, and will be sampled at commissioning stage - any failing the test will then being cleaned.</p> <p>Each party disagrees with the other party's position and therefore a dispute has arisen.</p>	<p><del>It is agreed by the Board and Contractor that this Dispute Item shall be resolved through witnessing and testing of the system, to demonstrate compliance with the BCR's / PCP's / Completion Criteria.</del></p> <p>The extent of ductwork requiring to be cleaned <u>at this stage</u> has been captured within the following document;</p> <ul style="list-style-type: none"> <li>• Duct Cleaning – Aconex MM-GC-004106, MPX-GC-027187 as set out in Schedule <b>[insert schedule reference attaching all Aconex documentation]</b>.</li> </ul> <p><del>It is agreed by the Board and Contractor that this Dispute Item shall be resolved through witnessing and testing of the system, to demonstrate compliance with the BCR's / PCP's / Completion Criteria.</del></p> <p><del>For the avoidance of doubt, any other ducts that fail any checks or tests, shall be appropriately cleaned by Project Co.</del></p>
18	<p><b>Bed Lift to Basement of Core 3</b></p> <p>The Board's position is the Financial Close submission (HSL-XX-XX-DC-4.15 Vertical Transportation) stated that the bed lift in core 3 would serve 5 floors.</p> <p>The Board notes the installed bed lift in core 3 only serves 4 floors.</p> <p>Project Co Position_____</p> <p>Each party disagrees with the other party's position and therefore a dispute has arisen.</p>	<p>The Board / Project Co agree this item is closed, and the agreed technical solution approved through Schedule Part 8 (Review Procedure) and, agreed by the Board and Project Co as resolving the Dispute is as set out in <b>[insert Schedule reference]</b>.</p> <p><b>Project Co to issue document for the Board's review</b></p>

Re m	Dispute	Description of Agreed Resolution
19	<p><b>Helipad fire fighting system (Water Pressure)</b></p> <p><u>The Board's position is the</u> Helipad fire fighting system does not comply with the guidance of HBN 15-03 Hospital Helipads clause 5.22. There does not appear to be a pressurised main supply, nor is there a system of inert gas to pressurise the system.</p> <p>Project Co's position is that a pressurised main supply and a system of inert gas to pressurise the system is not required.</p> <p>Each party disagrees with the other party's position and therefore a dispute has arisen.</p>	<p>In relation to Helipad fire fighting system (Water Pressure), the Board and Project Co note the CAAI has certified the helipad is fit for purpose as installed.</p> <p>Reference is made to letter received by the Contractor from CAAI dated 07 March "it is with pleasure that we can issue this letter of completion which, subject to certain conditions outside of Multiplex's control being met before the helipad commences operations, confirms the rooftop helipad at RHSC &amp; DCN is regarded as fit for purpose."</p> <p>Documentation is noted within Aconex MPX-GC-027315 as set out in Schedule [insert schedule reference attaching all Aconex documentation].</p>
20	<p><b>Vegetation around air intakes in Neuroscience and Staff Courtyards</b></p> <p>It is the Board's position that Landscape design around intake vents in Neuroscience Courtyard is potentially non-compliant with SHTM 03-01 which states:</p> <p><b>Air Intake</b> 1.42 An uncontaminated air supply to the system is essential. In order to achieve this, the air intake will be positioned so that air discharged from extract systems or other dubious sources cannot be drawn in. Exhaust fumes from vehicles can present particular problems. The area surrounding the intake will need to be kept clean and free of vegetation and waste material in order to reduce the possibility of biohazards or fire. The intake itself will be protected by a louvre and mesh screen to prevent rainwater, vermin and insects etc from entering the system.</p> <p>Project Co's position is that the design has been approved by the Board through RDD.</p> <p>Each party disagrees with the other party's position and therefore a dispute has arisen.</p>	<p>The Board / Project Co agree the Reviewable Design Data for this item has been given status Level A or B in accordance with Schedule Part B (Review Procedure).</p> <p>The following design measures proposed by Project Co and agreed with the Board to resolve the dispute, limit planting in the area surrounding the intake vents. This satisfies SHTM 03-01A Clause 1.42 in so far as it allows the area surrounding the vents to be clean and free of vegetation and waste material in order to reduce the possibility of biohazards or fire.</p> <p><b>Neuroscience Courtyard</b> Project Co have replaced the planting around the air intake vents with artificial grass with the exception of one area which has been planted with sedum as per the Board's request.</p> <p><b>Staff Courtyard</b> Project Co have incorporated a 600mm 'no plant zone' to the perimeter of the air intake vents."</p> <p>All as noted within Drawing HLM-20-03-PL-700-002 Rev E; Drawing HLM-20-00-PL-700-026 Rev E; and Aconex MM-GC-003873 as set out in Schedule [insert schedule reference attaching all Aconex documentation].</p>
21	<p><b>"Do not use" labels removed from Medical Gas Outlets before commissioning.</b></p> <p>It is the Board's position that Medical gas outlet "Do Not Use"</p>	<p>Through discussion it was agreed by Project Co and the Board that this Dispute will be resolved by the Medical gas outlet "Do Not Use" labels being put in place prior to commissioning, thus ensuring compliance with SHTM 02-01.</p>

Re m	Dispute	Description of Agreed Resolution
	<p>labels removed before commissioning, non compliance with SHTM02:01.</p> <p>Project Co's position is that there was no non-compliance relating to this issue.</p> <p>Each party disagrees with the other party's position and therefore a dispute has arisen.</p>	
22	<p><b>Isolation Room supply ventilation relative to low building.</b></p> <p>It is the Board's position that Isolation room ventilation is non-compliant for a 'low' building.</p> <p>Project Co's position is that the design and installation was based on isolation room ventilation report produced and tabled with the Board. This is compliant with the requirements of the Project Agreement.</p> <p>Each party disagrees with the other party's position and therefore a dispute has arisen.</p>	<p>The Board / Project Co agree this item is closed, and the agreed technical solution approved through Schedule Part B (Review Procedure) and, agreed by the Board and Project Co as resolving the Dispute is as set out in <a href="#">[insert Schedule reference]</a>.</p> <p><b>Project Co to issue document for the Boards review</b></p>
23	<p><b>Drainage joints in slabs</b></p> <p>It is the Board's position that Drainage joints have been installed in the slab between floors with no access for maintenance or repair. This means there is no manufacturer warranty for the drainage connection.</p> <p>Project Co's position is that the design and installation meets the requirements of the Project Agreement and was based on the package approved through Schedule Part B (Review Procedure).</p> <p>Each party disagrees with the other party's position and therefore a dispute has arisen.</p>	<p>Through discussion and site review with the Independent Tester, John Edwards (Arcadis) agreement has been reached on compliance and sign off.</p> <p>Reference is made to Aconex MPX RF1-002569 and RBP-GC-002637 and the confirmation from the Independent Tester as set out in Schedule <a href="#">[insert schedule reference attaching all Aconex documentation]</a>.</p>
24	<p><b>Fire Collar installation</b></p> <p>Fire collars for drainage are not directly connected to the slab+C19</p> <p>Project Co's position is that the installation was work in progress and would comply prior to the Actual Completion Date.</p>	<p>The Board and Project Co agree this Dispute is closed and no further action is required.</p> <p>Confirmation has been received from the Board that the installation is ongoing and Project Co will procure compliance with BCRs prior to the Actual Completion Date.</p>

**Subject:** RE: RHSC Settlement Agreement Technical Schedule

Dear all,

Further to a review of the latest technical schedule by the project team, I have attached initial comments for each item (also attached a pdf as sometimes easier to read the comments).

We have also tried to summarise the main themes below (some are repeats of previous emails, however thought best to collate into one email);

**1. Clause 7.1**

IHSL / MPX appear to have reverted to the Supplemental Agreement taking precedence over the PA;

“7.1 The Parties agree that in order to give effect to this Agreement, the provisions of the Project Agreement and other documents referred to in Part [ ] of the Schedule shall be:

- (a) supplemented and amended as set out in Part [ ] of the Schedule; and/ or
- (b) (where no express supplement or amendment is set out in Part [ ] of the Schedule) deemed to have been supplemented and amended in order to give effect to the agreed resolution set out in the [third column] of Part [ ] of the Schedule;

with effect from the date of this Agreement.

The Parties agree that all such supplements and amendments as set out in this Agreement:

- (a) shall, in the event of any inconsistency with the provisions of the Project Agreement or other document referred to in Part [ ] of the Schedule, take precedence over the Project Agreement or other such document; and
- (b) shall be deemed to have been agreed in accordance with the Project Agreement, and that the entry into of this Agreement shall not constitute a breach by either Party of the Project Agreement.”

Suggest further discussion is required on the interpretation / implications of the above.

**2. Project Co Position added to the Dispute Column**

“Project Co position” has been added to each item in the Dispute Column, it falls into three main categories;

Category (i) - Project Co's position is that the design and installation of the xxxxx meets the requirements of the Project Agreement and was based on the package approved through Schedule Part 8 (Review Procedure).

Category (ii) - Project Co do not dispute the Board's position.

Category (iii) - Project Co wishes to derogate from the requirements above for the following areas;

The following are general comments from the above

- There is a lack of accuracy with category (i) – it is unclear which package Project Co are saying has been “approved” through the Review Procedure.
- There appears to be a lack of consistency as to how Project Co have applied the above categories.
- Some of the statements are incorrect, and confuse the actual item in dispute.

### **3. Closing of issues**

Whilst all parties want to conclude the settlement agreement, Project Co / MPX have incorrectly closed a number of items that are still pending information. For example where we had said the item was status C, this has been deleted and the item closed.

Item 50, currently this sits at status C however Project Co record it as status B.

Item 58 Lighting in Service Yard, the submission currently sits at status C. Despite we have progressed this item, we are still waiting for formal RDD submission incorporating Board's comments.

### **4. Deletion of Columns**

Project Co Obligations, Board Obligations and Changes to Project Agreement have been deleted, and the following statement has been added “The Board and Project Co agree this Dispute is closed, and no further works are required on Site”.

Similar to point 3 above, Project Co / MPX are intent on closing items that have not been fully resolved.

- Who holds the risk if Project Co have incorrectly installed item? In the short term and longer term.
- Where does the IT sit with the revised drafting of 7.1 and the above additions?
- A full review of the Project Co Obligations column will be required as some of the caveats have been lost.
- The statement sometimes contradicts Project Co / MPX statement where they say additional work is required.

I think this is a key issue through the document (and also in meetings with MPX) – items prematurely closed. Project Co / MPX response will be we are asking for too much information.

### **5. Status B drawing issued for information**

The following statement has been added to a few of the items “Status B drawings have been returned to the Board for information”. The Board do not review the for information drawings, hence suggest needs deleted.

### **6. Aconex references**

Aconex references have been added that we do not have access to, suggest a PDF of the Aconex, and a hard drive of the associated design data is required?

### **7. Reducing the list?**

Linked to item 6 above, given the time pressure on this, could we suggest again that non critical issues are removed from the list in order we can focus on the real issues?

### **8. Previously project co changes**

The items that were previously deemed project co changes have been completely re-drafted, with the only one looking remotely like a Project Co change being the Movement Joint. Suggest further discussion is required on the risks associated with this approach. The detailed information is generally available, hence why don't we still to the same format.

There are also clear non compliances with the BCR's e.g. 25% spare capacity, however Project Co / MPX appear to be disagreeing. Does not make sense.

**9. Items that have been summarised**

There are items where examples of the solutions have been provided, e.g. item 10 - Drainage above IPS rooms / above IPS panels / Node Rooms. Concerned that if the Board have not identified all instances of the issue, the Board now has no recourse if another instance were to occur in the future.

**10. Technical Content**

Generally the "direction of travel" of the technical content has not altered, however linked to previous comments, because the items have been prematurely closed by IHSL / MPX, its unclear what the final position is on certain items.

**11. Not Used Items**

End on a positive note – item 39 outstanding status C, item 42 Environmental Matrix, and 81 Intake rooms in separate parts of the building remain not used.

Hope the above helps your discussions on Monday,

Have a good weekend,

Kind Regards  
Graeme

RHSC + DCN

Schedule Part 01 - Technical Schedule to the Settlement Agreement

WITHOUT PREJUDICE

~~23 June 2017~~ July 2018 - Rev 01

Note: Given that the technical schedule does not expressly set out all necessary amendments to the Project Agreement, Clause 7.1 of the PA Settlement Agreement will require adjustment as follows:

"7.1 The Parties agree that in order to give effect to this Agreement, the provisions of the Project Agreement and other documents referred to in Part [ ] of the Schedule shall be:

- (a) [ ] supplemented and amended as set out in Part [ ] of the Schedule; and/or
  - (b) [ ] (where no express supplement or amendment is set out in Part [ ] of the Schedule) deemed to have been supplemented and amended in order to give effect to the agreed resolution set out in the [third column] of Part [ ] of the Schedule;
- with effect from the date of this Agreement.

The Parties agree that all such supplements and amendments as set out in this Agreement:

- (a) [ ] shall, in the event of any inconsistency with the provisions of the Project Agreement or other document referred to in Part [ ] of the Schedule, take precedence over the Project Agreement or other such document; and
- (b) [ ] shall be deemed to have been agreed in accordance with the Project Agreement, and that the entry into of this Agreement shall not constitute a breach by either Party of the Project Agreement."

Formatted: Width: 29.7 cm, Height: 21 cm

**Commented [GG1]:** Appears to significantly alter the risk allocation in favour of Project Co.  
Suggest further discussion required on the implications.  
If accepted, suggest additional technical mitigation measures may be appropriate.

Item	Dispute	Description of Agreed Resolution
------	---------	----------------------------------

Item	Dispute	Description of Agreed Resolution
1	<p><b>Lighting in fire fighting stairwells</b></p> <p>The lighting within the 7 fire fighting shafts / stairwells and associated lobby has been installed with single circuit from the local lighting distribution boards that are not supplied by the fire rated cables.</p> <p>The Board believes <del>that the 2</del> fire fighting shafts / stairwells should be supported by a primary and secondary fire rated power supplies from dedicated distribution boards and automatic changeover for dual fire rated supplies.</p> <p><u>Project Co's position is that the design and installation of the lighting within the 7 fire fighting shafts / stairwells meets the requirements of the Project Agreement and was based on the approval through Schedule Part 8 (Review Procedure).</u></p>	<p><del>The Board approve</del> <u>to resolve the Dispute, the Board approved Project Co's proposal for the lighting in the fire rated power and the 7 fire fighting shafts / stairwells.</u></p> <p>Project Co <del>proposes</del> <del>to also receive</del> approval <u>to their proposal for the lighting in the 7 fire fighting shafts/stairwells</u> from the Building Control Officer and Scottish Fire and Rescue; and</p> <p><u>Project Co will address</u> any compliance requirements from the independent Tester <u>in accordance with the Project Agreement.</u></p> <p><u>Proposal and approval all as specified in MPX-SC-027173 (Aconex chain of correspondence as set out in Schedule Part 8 schedule reference attaching all Aconex documentation).</u></p> <p><u>The Board and Project Co agree this Dispute is closed, and no further works are required on site.</u></p>
2	<p><b>Non Fire rates IPS / UPS cabling</b></p> <p>For compliance with BS 7671 and Guidance Note 7, and also BS 8519 circuits associated with essential life-support services should be either fire-rated or fire-protected. The implication of this is, in the event of a fire, power may be lost to essential life safety medical equipment in critical areas.</p> <p><u>The Board believes that</u> Project Co has installed non fire rated cables to IPS boards serving critical areas.</p> <p><u>Project Co's position is that the design and installation meets the requirements of the Project Agreement and was based on the package approved through Schedule Part 8 (Review Procedure)</u></p>	<p><u>The design date agreed resolution of the dispute submitted by Project Co through the Schedule Part 8 (Review Procedure) and agreed by the Board is set out below</u> <del>has been given status A / B through the Review Procedure of Level A or Level B.</del></p> <p><u>Level B drawings have been returned to the Board for information.</u></p> <p>Following a collaborative review of the design <u>between the Board and Project Co</u>, Project Co made changes to 11 Number sub mains cables from UPS switchboard to UPS distribution boards changing these to fire rated. <del>Some are up</del></p> <p><u>The remaining UPS submains cables were agreed by the Board and Project Co to be left unaltered. All as noted within Aconex chain of correspondence MPX-Transmit-010735, as set out in Schedule Part 8 (Review Procedure) attaching all Aconex documentation.</u></p> <p>WW-S2-B1-PS-531-101 Rev 1 UPS 1 Cable Route RDO Status A (13/4/18)</p> <p>WW-S2-B1-PS-531-102 Rev 1 UPS 2 Cable Route RDO Status B (13/4/18)</p>

**Commented [GG3]:** Linked to points below, suggest specific drawings would need to be included – this has moved from intent to approve, to approved.

**Commented [GG4]:** The Board has not yet received any letter from Building Control or SFRS.

The Board suspect the question to Building Control and SFRS will be restricted to Emergency Lighting, and not the wider issue of life safety and fire fighting applications

**Commented [GG5]:** Aconex refers emergency lighting rather than lighting for life safety and fire fighting applications as per BS 7671.

**Formatted:** Space After: 8 pt, Line spacing: Multiple 1.08 i

**Commented [GG6]:** General comment – this statement does not work, not all the items are closed, particularly this one.

**Commented [GG2]:** General comment that applies to all – "based on the package" is very vague. Which package are Project Co referring to?

We would also need to check if it was given status A or B, one of these packs may be status C.

**Formatted:** Font colour: Auto

**Formatted:** Tab stops: 1.83 cm, Left

**Commented [GG8]:** The Board have not reviewed the "for information" drawings, hence no relevance to the Settlement Agreement?

**Commented [GG7]:** As per point above, I will not repeat same comment for all.

Item	Dispute	Description of Agreed Resolution
		<p>WW-S2-B1-PL-531-103 Rev 1 UPS 3 Cable Route RDD Status B (13/4/18)</p> <p>WW-S2-B1-PL-531-104 Rev 1 UPS 4 Cable Route RDD Status A (13/4/18)</p> <p>WW-S2-B1-PL-531-105 Rev 1 UPS 5 Cable Route RDD Status B (13/4/18)</p> <p>WW-S2-B1-PL-531-106 Rev 1 UPS 6 Cable Route RDD Status B (13/4/18)</p> <p>WW-S2-B1-PL-531-107 Rev 1 UPS 7 Cable Route RDD Status A (13/4/18)</p> <p>WW-S2-B1-PL-531-108 Rev 1 UPS 8 Cable Route RDD Status A (13/4/18)</p> <p>WW-S2-B1-PL-531-109 Rev 1 Helipad Cable Route RDD Status A (13/4/18)</p> <p>WW-S2-B1-PL-531-112 Rev 1 UPS 12 Cable Route RDD Status B (13/4/18)</p> <p>WW-S2-B1-PL-531-114 Rev 1 UPS 14 Cable Route RDD Status A (13/4/18)</p> <p>WW-XX-XX-DC-XXX-010 Rev 3 UPS / UPS Cable Alternative RDD Status B (13/4/18)</p> <p>WW-XX-XX-SC-539-001 Rev G UPS System Schematic RDD Status A (13/4/18)</p> <p><u>The Board and Project Co agree this Change is closed and no further action is required.</u></p>
3	<p><b>No earth bonding in certain required areas.</b></p> <p><del>The Board's position is that (i) equipotential bonding has been installed in 144 Group 1&amp;2 rooms. Equipotential bonding is required to prevent electric shock to patients, staff and visitors.</del></p> <p><del>As a result of further efforts by Project Co and the Board, the Board's position is that the installation and installation meets the requirements of the relevant standards. The Board understands that the original position of bonding was 144 rooms by Project Agreement and was based on the package approved through Schedule Part B (Review Procedure).</del></p>	<p><del>Through this</del></p> <p><del>In accordance with Schedule Part B (Review Procedure) the Room by Room Risk Profile as set out in Schedule Part B produced by Project Co has been given status Level B, and the correct grouping and categorisation has been applied to the original 144 rooms mentioned in the description.</del></p> <p><del>In accordance with Schedule Part B (Review Procedure), the Board / Project Co has agreed that a further 36 rooms will be modified to Group 1 Category 2, and 1 No. Group 1 Category 3 in relation to providing equipotential bonding.</del></p> <p><del>The details of the resolution of the Dispute agreed by Project Co and the Board and the modifications to be undertaken by Project Co are noted within WWHET-Transmit-001046 as set out in Schedule Part B (Review Procedure).</del></p>

**Commented [GG9]:** What happens if Project Co have incorrectly installed any of the above? In the short term and longer term.

**Formatted Table**

**Commented [GG10]:** Important caveat from the Project Obligations has been lost – full review required.

Ensure rooms are correctly categorised and grouped per SI-ITM 06-01 and BS 7671 Table 9.1 of Guidance Note 7

5	<p>25% spare capacity</p> <p>The Board's position is that 25% spare capacity should be provided by Project Co in terms of main and sub main distribution containment, UPS Boards, AHU, physical space in voids and ceilings, risers.</p> <p>The Board are of the opinion that it is apparent from 4-4/2018 visits that the spare capacity has not been provided.</p> <p>Project Co's position is that the design and installation needs the requirements of the Project Agreement was based on the package approved through Schedule Part 8 (Review Procedure) and spare capacity had been allowed in compliance with the BCR's.</p>	<p>The spare capacity has been identified within a Spare Capacity Statement as set out in <a href="#">Insert Schedule reference</a>.</p> <p>This – the as to of which Board and Project Co have been reviewed and commented – is why we upon within the Spare Capacity Statement – as set out in <a href="#">Insert Schedule reference</a> – NHSL.pdf and MGPS Spare Capacity Statement.pdf.</p> <p>Medical Gas report dated 29 June 2018 as set out in <a href="#">Insert Schedule reference</a> was reviewed by Project Co to respond to Board's comments. No adverse comments have been received from the Board in relation to this Report.</p> <p>All as recorded within Iconex MPX-GC-026751, NHSL-GC-003075 and MPX-GC-027180, as set out in Schedule <a href="#">Insert schedule reference at Article 31 Iconex documentation</a>.</p> <p><del>Project Co support the minimum 25% spare capacity and the Board are aware of</del></p> <p>The Board and Project Co agree this Dispute is closed and no further action is required in order to resolve the Dispute.</p>																																																																																

Commented [GG14]: Suggest the clinical team is better placed to draft these statements than Project Co?

Formatted Table

Commented [GG15]: There is inconsistency in Project Co's approach. This is a clear non compliance with the BCR's, and their report confirms that, however unlike the movement joint, they are not asking for relief from the BCR's.

Formatted: Font: 9 pt, Not Bold

Formatted: Space After: 0 pt

Formatted: Highlight

Commented [GG16]: Significant risk transfer to the Board here.

Formatted: Font colour: Black

Formatted: Font colour: Black

Commented [GG17]: There was an outstanding comment from Ronnie on the medical gases, not sure if the issue is closed.

Commented [GG18]: At a previous principals meeting, Susan had requested savings relative to the reduced future flexibility. No savings have yet been identified.

Item	Dispute	Description of Agreed Resolution
6	<p><b>HV distribution</b></p> <p>In relation to system resilience, the Board believes Project Co's design for HV Distribution is non-compliant with the Board's Construction Requirements (BCR's), Project Co Proposal's (PCP's) and SHTM Guidance for the following elements;</p> <ol style="list-style-type: none"> <li>1. Resilience of the HV main intake switch room,</li> <li>2. HV cable distribution,</li> <li>3. Item	Dispute	Description of Agreed Resolution
	<p><u>Comments were received in Financial Close and these were documented and the design amended to reflect the Board's comments.</u></p>	<p>1. 4 air changes per hour (4 ac/hr) within single bedrooms, and                  2. Increase the mechanical change-out rate on rate with a single bedroom MCR from 3 ac/hr change per hour (3 ac/hr) to <u>min</u> 10 air changes per hour (10 ac/hr).</p> <p><b>Reasons</b></p> <p>The design philosophy for flats with a single bedroom is to provide a balanced ventilation system which is intended to provide both physiological and a better level of air flow to most part of central of the environment, and reducing the load on the mechanical ventilation system respectively. The strategy results in some pressure differential regime within the room where supply and extract is balanced.</p> <p>2. Add to specify the mechanical extract vent for an average rate has been assumed within the single bedrooms) within ensuite from 3 ac change per hour (3 ac/hr) to 10 ac changes per hour (10 ac/hr) (minimum) to provide a fresh environment for occupants. The ensuite extract provides a balanced air change rate to the bathroom.</p> <p>The design intent and figures noted above are reflected within the environmental matrix previously submitted through <u>ADD Schedule Part B (Review Procedure) - WXX-XX-DC-XXX-001 Rev 11</u>.</p> <p><b>Implications</b></p> <p>Reduced through ensuring an by gross of air exhausted mechanical vent for an rates with a single bedroom. Reducing the rate to within a minimum 10 ac/hr ensure the extract performance duty has sufficient capacity for both the wet and showers extract fan, and ultimately provides the balanced vent for an rate required between the bedroom and the ensuite.</p>
14	<p><b>Smoke clearance in fire fighting stairwells</b></p> <p>As per the Non Domestic Technical Handbook and project specific Fire Strategy, all fire fighting stairwells shall be provided with appropriate ventilation for heat and smoke control. Currently only a percentage of stairwells appear to have openings for high level ventilator. No details of electrical connections including fire rated cables for fire fighting plant as per BS 8519 <u>have been provided.</u></p> <p><u>Project Co do not dispute the Board's position.</u></p>	<p>The fans shall be provided through a means of control of the system, and through compliance with the BS 5446 / BS 5446-1 / BS 5446-2.</p> <p><u>Through a remote activation via a button to the design unit.</u></p> <p>The remote activation and minimum free area opening <u>is as noted in MPX-CC-036780.</u></p> <p><u>In line with clause 2.14.6 (and table 2.14) of the NDTH, each of the stairs are designed with a mix of 'ventilators' achieving 1.5qm ea. to the top of the stair (either smoke vents or windows). The strategy to each stair is noted</u></p>

**Commented [GG38]:** Not able to access.

General comment – suggest all files need to be issued on external hard drive for review, with a PDF of the Aconex created?

**Commented [GG39]:** Transfers the risk to the Board to inspect the full Facility, which has not, and perhaps cannot be done.

General comment – the design / construction risk appears to be getting passed to the Board – suggest this is not appropriate.

**Commented [GG40]:** No evidence that this item has been progressed on site.

General Comment – all items should be subject to normal witnessing and testing, and inspection by the Independent Tester.

Commented [GG42]: Project Co Change text is required here

Note the long term energy consumption risk sits with the Board, hence as a minimum critical the Board gets the As Installed Energy model through RDD, this suggests nothing will be submitted through RDD.

RHSC + DCN

Schedule Part 01 - Technical Schedule to the Settlement Agreement

WITHOUT PREJUDICE

~~22 June 2017~~ 17 July 2018 - Rev 01

Note: Given that the technical schedule does not expressly set out all necessary amendments to the Project Agreement, Clause 7.1 of the PA Settlement Agreement will require adjustment as follows:

"7.1 The Parties agree that in order to give effect to this Agreement, the provisions of the Project Agreement and other documents referred to in Part [ ] of the Schedule shall be:

- (a) supplemented and amended as set out in Part [ ] of the Schedule; and/ or
- (b) (where no express supplement or amendment is set out in Part [ ] of the Schedule) deemed to have been supplemented and amended in order to give effect to the agreed resolution set out in the [third column] of Part [ ] of the Schedule;

with effect from the date of this Agreement.

The Parties agree that all such supplements and amendments as set out in this Agreement:

- (a) shall, in the event of any inconsistency with the provisions of the Project Agreement or other document referred to in Part [ ] of the Schedule, take precedence over the Project Agreement or other such document; and
- (b) shall be deemed to have been agreed in accordance with the Project Agreement, and that the entry into of this Agreement shall not constitute a breach by either Party of the Project Agreement."

Formatted: Width: 29.7 cm, Height: 21 cm

**Commented [GG1]:** Appears to significantly alter the risk allocation in favour of Project Co.  
Suggest further discussion required on the implications.  
If accepted, suggest additional technical mitigation measures may be appropriate.

Item	Dispute	Description of Agreed Resolution
------	---------	----------------------------------

Re m	Dispute	Description of Agreed Resolution
1	<p><b>Lighting in fire fighting stairwells</b></p> <p>The lighting within the 7 fire fighting shafts / stairwells and associated lobby has been installed with single circuit from the local lighting distribution boards that are not supplied by the fire-rated cables.</p> <p>The Board believes <del>that the 7 fire fighting shafts / stairwells</del> should be supported by a primary and secondary fire rated power supplies from dedicated distribution boards and automatic changeover for dual fire rated supplies.</p> <p><u>Project Co's position is that the design and installation of the lighting within the 7 fire fighting shaft / stairwells meets the requirements of the Project Agreement and was based on the package approved through Schedule Part 8 (Review Procedure).</u></p>	<p><del>The Board approve</del> <del>To resolve the Dispute, the Board approved Project Co's proposal for the lighting in the shaft well provided the 7 fire fighting shafts / stairwells.</del></p> <p>Project Co <del>is to</del></p> <p><del>also received approval to their proposal for the lighting in the 7 fire fighting shafts / stairwells</del> from the Building Control Officer and Scottish Fire and Rescue and</p> <p><del>Project Co will address</del> any compliance requirements from the Independent Tester <u>in accordance with the Project Agreement.</u></p> <p>Proposal and approval all as specified in <u>MPX-DC-027173/Aconex chain of correspondence as set out in Schedule (insert schedule reference attaching all Aconex documentation).</u></p> <p><u>The Board and Project Co agree this Dispute is closed, and no further works are required on site.</u></p>
2	<p><b>Non Fire rates UPS / UPS cabling</b></p> <p>For compliance with BS 7671 and Guidance Note 7, and also BS 8519 circuits associated with essential life-support services should be either fire-rated or fire-protected. The implication of this is, in the event of a fire, power may be lost to essential life safety medical equipment in critical areas.</p> <p><u>The Board believes that</u> Project Co has installed non fire rated cables to UPS boards serving critical areas.</p> <p><u>Project Co's position is that the design and installation meets the requirements of the Project Agreement and was based on the package approved through Schedule Part 8 (Review Procedure)</u></p>	<p>The <del>doc g-14th</del> <del>closed</del> <del>agreed</del> resolution of the Dispute submitted by Project Co through the Schedule Part 8 (Review Procedure) and agreed by the Board is set out below <del>to the to</del> and has been given status A / B <del>through the Review Procedure (Level A or Level B).</del></p> <p><u>Status B drawings have been returned to the Board for information.</u></p> <p>Following a collaborative review of the design <u>between the Board and Project Co</u>, Project Co made changes to 11 Number sub mains cables from UPS switchboard to UPS distribution boards changing these to fire rated.</p> <p><del>Remaining</del></p> <p>The remaining UPS submains cables <u>were agreed by the Board and Project Co to be</u> left unaltered. All as noted within Aconex chain of correspondence MPX-Transmit-010735, as set out in Schedule (insert schedule reference attaching all Aconex documentation).</p> <p>WW-SZ-B1-PL-531-101 Rev 1 UPS 1 Cable Route RDO Status A (13/4/18)</p> <p>WW-SZ-B1-PL-531-102 Rev 1 UPS 2 Cable Route RDO Status B (13/4/18)</p>

**Commented [GG3]:** Linked to points below, suggest specific drawings would need to be included – this has moved from intent to approve, to approved.

**Commented [GG4]:** The Board has not yet received any letter from Building Control or SFRS.

The Board suspect the question to Building Control and SFRS will be restricted to emergency Lighting, and not the wider issue of life safety and fire fighting applications

**Commented [GG5]:** Aconex refers emergency lighting rather than lighting for life safety and fire fighting applications as per BS 7671.

**Formatted:** Space After: 8 pt, Line spacing: Multiple 1.08 li

**Commented [GG6]:** General comment - this statement does not work, not all the items are closed, particularly this one.

**Commented [GG2]:** General comment that applies to all – "based on the package" is very vague. Which package are Project Co referring to?

We would also need to check if it was given status A or B. Some of these packs may be status C.

**Formatted:** Font color: Auto

**Formatted:** Tab stops: 1.83 cm, Left

**Commented [GG8]:** The Board have not reviewed the "for information" drawings, hence no relevance to the Settlement Agreement?

**Commented [GG7]:** As per point above, I will not repeat same comment for all.

Re m	Dispute	Description of Agreed Resolution

Commented [GG14]: Suggest the clinical team is better placed to draft these statements than Project Co?

Formatted Table

Commented [GG15]: There is inconsistency in Project Co's approach. This is a clear non compliance with the BCR's, and their report confirms that, however unlike the movement aint, they are not asking for relief from the BCR's.

Formatted: Font: 9 pt, Not Bold

Formatted: Space After: 0 pt

Formatted: Highlight

Commented [GG16]: Significant risk transfer to the Board here.

Formatted: Font color: Black

Formatted: Font color: Black

Commented [GG17]: There was an outstanding comment from Ronnie on the medical gases, not sure if the issue is closed.

Commented [GG18]: At a previous principals meeting, Susan had requested savings relative to the reduced future flexibility. No savings have yet been identified.

Item	Dispute	Description of Agreed Resolution
6	<p><b>HV distribution</b></p> <p>In relation to system resilience, the Board believes Project Co's design for HV Distribution is non-compliant with the Board's Construction Requirements (BCR's), Project Co Proposal's (PCP's) and SHTM Guidance for the following elements;</p> <ol style="list-style-type: none"> <li>1. Item	Dispute	Description of Agreed Resolution
	<p><u>permitted.</u></p> <p><u>Comments were received pre Financial Close and there were documented and the design amended to reflect the Board's comments.</u></p>	<p><u>remain to be agreed to remain as designed and constructed namely:</u></p> <ol style="list-style-type: none"> <li><u>4 air changes per hour (4 ac/hr) within single bedrooms, and</u></li> <li><u>increase the motion coil air change vent lot on rate within single bedrooms WCs from 3 air changes per hour (3 ac/hr) to <u>min</u> 10 air changes per hour (10 ac/hr).</u></li> </ol> <p><b>Reasons:</b></p> <p>The design philosophy for this site with its glazed facade (double glazed) and side openable window natural ventilation is encouraged, which is believed to provide both physiological and environmental benefit by allowing users partial control of the environment, and reducing the loading on the motion coil vent lot on system respectively. The strategy results in more pressure differential strategies within the rooms where supply and extract is balanced.</p> <p><u>2. Additionally, the motion coil extract vent lot on air change rate has been increased within the single bedrooms (within ensuite) from 3 air changes per hour (3 ac/hr) to 10 air changes per hour (10 ac/hr) (minimum) to provide a fresh air comment for post-occupancy. This is to ensure a balanced air change rate to the bedrooms.</u></p> <p>The design intent and figures noted above are reflected within the environmental matrix previously submitted through <u>APP Schedule Part B (Review Procedure) - WY-XX-XX-DC-XXX-001 Rev 1.1</u></p> <p><b>Implications</b></p> <p>Reduced energy consumption by providing reduced motion coil vent lot on rate within each single bedroom.</p> <p>Providing the ensuite with a minimum 10 ac/hr ensure the extract performance duty has sufficient capability for both the wet and shower extraction, and ultimately provide the balanced vent lot on rate required between the bedrooms and the ensuite.</p>
14	<p><b>Smoke clearance in fire fighting stairwells</b></p> <p>As per the Non Domestic Technical Handbook and project specific Fire Strategy, all fire fighting stairwells shall be provided with appropriate ventilation for heat and smoke control. Currently only a percentage of stairwells appear to have openings for high level ventilator. No details of electrical connections including fire rated cables for fire fighting plant as per BS 8519 <u>have been provided.</u></p> <p><u>Project Co do not dispute the Board's position.</u></p>	<p><u>This item shall be resolved through witnessing and testing of the system, and through compliance with the DCW's / PCW's / Compliance Certificate.</u></p> <p><u>The design shall be subject to the design team's input.</u></p> <p><u>The remote activation and minimum free area opening.</u></p> <p><u>is as noted in MPX-GC-1262004.</u></p> <p><u>In line with clause 2.14.0 (and table 2.10) of the NDTH, each of the stairs are designed with a min of 'ventilators' achieving 13mm ea. to the top of the stair (either smoke vents or windows). The strategy to each stair is noted.</u></p>

**Commented [GG42]:** Project Co Change text is required here

Note the long term energy consumption risk sits with the Board, hence as a minimum critical the Board gets the As Installed Energy model through RDD, this suggests nothing will be submitted through RDD.

Commented [GG43]: Project Co change is required for this, insufficient information yet been provided for the Board (and BYES to assess the risk.

General comment – what is BYES position on all of this? We are hearing many of the Project Co Changes are now getting stalled by BYES.

Colin,

See enclosed a copy of the revised ward ventilation proposals to achieve a room balance at 4ac/hr.

Can you please confirm when site access will be available and we will attend to review the routes and space constraints associated with the proposed ductwork.

Regards,

Brian

**Subject:** Re: 12.04.18 4 Bed Workshop Summary

Hi Ronnie

4ACH is the brief - supply and extract. The rev 05 schedule is the previous schedule tabled from last year. If you use this schedule at this stage purely as identifying the room numbers for the 14 rooms so that TUV SUD are updating/changing the design to the correct 14 rooms.

The schedule will be reissued to Rev 06 capturing the revised design intent as part of the RDD process pack being pulled together following the site survey to assess feasibility of what was tabled last Thursday.

Regards

Ken

**To:** Douglas Anderson, Kamil Kolodziejczyk, Ronnie Henderson, Stewart McKechnie  
**Cc:** Colin Grindlay, Andrew McColl  
**Mail Number:** MPX-MM-000503  
**Subject:** 12.04.18 4 Bed Workshop Summary

Confirmation of Key Points discussed.

Attendees: as attached.

Marked Up Drawings Tabled: as attached.

Agenda: as below - (MPX-GC-026334)

Date and Time: 12.04.18 @ 13.00Hrs

1.0 SM noted concerns on agreement from the previous workshop No1 that the objective of workshop No2 was to obtain agreement in principle on the draft drawings being tabled to allow progress to continue on 4 bed design. This was due to NHSL held up at another meeting, and no delegated authority at the workshop.

**Action. Concerns resolved as Ronnie Henderson joined the workshop at 13.30.**

#### **A. 4 BED Agenda Item**

2.0 14 Rooms in question tabled based on the previous Rev 05 schedule. Rooms cross referenced drawings against the schedule. See attached schedule and drawings over viewed.

3.0 Room "M" type. NHSL noted environmental matrix notes supply and extract. Drawing tabled and site inspection has no changes to the extract.

**Action: TUV SUD to confirm design intent to comply with the environmental matrix.**

4.0 Area I + J. NHSL requested actual air change rates be confirmed given the increase in one extract system rather than perhaps introducing it across the 3 systems in the locale.

**Action: Increase in air change rate(s) to be identified due to noise concerns.**

5.0 Physical sizes of all increased duct sizes to be verified at site to confirm any spatial constraints.

**Post meeting note: Surveys confirmed to proceed 18.04.18. Findings to be shared with NHSL.**

6.0 NHSL confirmed agreement in principal to the strategy tabled, and to proceed to the next stage of site survey based on drawings tabled. Thereafter RDD pack to be submitted for speedy approval.

7.0 Spare capacity. TUV SUD tabled the initial draft assessment:

Supply: No impact as being maintained at 4ACH as per the Environmental Matrix.

Extract: AHU-04-06: extract up by 23%.

Extract: AHU-04-07: extract up by 10%.

Extract: AHU-04-08: extract up by 15%.

Extract: AHU-02-23: extract up by 36%.

Extract: AHU-04-04: extract up by 6%.

TUV SUD noted dialogue with Supplier of AHU being undertaken.

**Action: Spare capacity impact analysis document to be issued after site checks carried out on spatial review to identify impact on current spare capacity to allow NHSL to consider if the design can proceed on this basis.**

#### **B. Spare Capacity Document**

NHSL noted receipt of spare capacity document. Comments on the document to be tabled at next workshop.

8.0 NHSL noted the document issued per department had the comments removed that were in the original spare capacity document issued. Specifically for example the fans in relation to 10% spare capacity comment. NHSL reiterated clarity if the fans had 25% spare capacity, this was confirmed by TUV SUD.

Action: TUV SUD to confirm statement made at the meeting, ventilation 25% design spare capacity on the fans.

### C. Schneider Agreement

9.0 TUV SUD statement distributed at the meeting,

Action: NHSL to feedback at next workshop.

### D AOB

10.0 NHSL requested Thursday meetings continue, perhaps alternated mechanical and electrical depending on topics to be resolved.

11.0 TUV SUD queried if generator load profile document had been returned by NHSL / MPX.

MPX confirmed after meeting TUV SUD were issued the document on 10.04.18.

Action: TUV SUD to confirm feedback on NHSL comments received.

12.0 NHSL noted query regarding earth cable and fire rated cabling. To be discussed and agreed at next workshop. NHSL requested formal confirmation to the points raised within original calculations feedback.

Action: TUV SUD to respond to Aconex MPX-GC-026161 dated 29.03.18.

Next meeting: Thursday 19.04.18, agenda to be issued prior to meeting.

Colin,

The Board reviewed the ventilation distribution drawings as per MPX-TRANSMIT-010775 and has no comments on the proposal. Note however that associated documents such as (but not limited to) grille schedules and fire cause & effect need to be updated to reflect this updated design.

Regards

Kamil

## Multi Bed – Ventilation Amendment Proposal to Achieve Room Balance WW-SZ-XX-DC-XXX-010

### Proposed Solution to Rooms Identified as Being of Concern

Room Reference Location	Ventilation Layout Drawing Number	Room Number	Room Description	Proposed Solution	Severity of Works			Ductwork Fabricated
					Local	Medium	Major	Yes/No
A	WW-Z4-00-PL-524-001K	G-A2-054	Multi Bed (4) Room Occupancy 10 People	Retain the supply ventilation at 4ac/hr and the en-suite ventilation at 10ac/hr. Ducts servicing en-suite & toilets to be retained at their original sizes. Introduce new general extract ductwork and grille into the room to provide 4ac/hr overall. This will achieve a balanced room pressure. Branch ducts to be connected locally into the existing general extract ductwork main. Supply & Extract Duty 174l/s. (Equates to 17 people).		✓		Yes
B	WW-Z4-00-PL-524-001K	G-A2-046	Multi Bed (4) Room Occupancy 10 People	Retain the supply ventilation at 4ac/hr and the en-suite ventilation at 10ac/hr. Ducts servicing en-suite & toilets to be retained at their original sizes. Introduce new general extract ductwork and grille into the room to provide 4ac/hr overall. This will achieve a balanced room pressure. Branch ducts to be connected locally into the existing general extract ductwork main. Supply & Extract Duty 174l/s. (Equates to 17 people).		✓		Yes
C	WW-Z4-00-PL-524-002L	G-A2-028	Multi Bed (4) Room Occupancy 10 People	Retain the supply ventilation at 4ac/hr and the en-suite ventilation at 10ac/hr. Ducts servicing en-suite & toilets to be retained at their original sizes. Introduce new general extract ductwork and grille into the room to provide 4ac/hr overall. This will achieve a balanced room pressure. Branch ducts to be connected locally into the existing general extract ductwork main. The main itself will be increased in size over a defined length. Supply & Extract Duty 174l/s. (Equates to 17 people).		✓		Yes
D	WW-Z4-01-PL-524-001J	1-B1-063	Multi Bed (4) Room Occupancy 15 People	Retain the supply ventilation at 4ac/hr. Introduce new general extract ductwork and grille into the room to provide 4ac/hr overall. The existing general extract ductwork currently serving the room has been increased in size and another grille added to it to serve the room. This will achieve a balanced room pressure. New branch duct to be connected locally into the existing general extract ductwork main. Supply & Extract Duty 312l/s. (Equates to 31 people).		✓		Yes
E	WW-Z4-01-PL-524-001J	1-B1-031	Multi Bed (4) Room Occupancy 15 People	Retain the supply ventilation at 4ac/hr. Introduce new general extract ductwork and grille into the room to provide 4ac/hr overall. The existing general extract ductwork currently serving the room has been increased in size and another grille added to it to serve the room. This will achieve a balanced room pressure. New branch duct to be connected locally into the existing general extract ductwork main. Supply & Extract Duty 332l/s. (Equates to 33 people).		✓		Yes

T	WW-Z4-03-PL-524-002G	3-D9-022	Multi Bed (3) Room Occupancy 11 People	Retain the supply ventilation at 4ac/hr and the en-suite ventilation at 10ac/hr. Introduce new general extract ductwork and grilles into the room to provide 4ac/hr overall. This will achieve a balanced room pressure. Branch ducts to be connected locally into the existing general extract ductwork mains. One of the mains itself will be increased in size over a defined length. Supply & Extract Duty 122l/s. (Equates to 12 people)		✓		Yes

### Notes :-

- 1) Room occupancy is taken from the Clinical Output Based Specifications.
- 2) Bedroom ventilation is based on a fresh air rate allowance of 10l/s per person in line with SHTM 03-01.

## Message

Kamil

4 Bed bay Ventilation.

Please find below and attached a response from Multiplex to the queries raised in your Aconex of 05/06/17 . It appears evident that the referenced BCR documents give very specific design instructions / specifications regarding the pressure regime for the 4 bed bays . Consequently we still consider that the requirements for balanced pressure to be a Board Change and as such request a Change Request to be issued.

Regards

David

David,

Please see response to R.A.M-GC-000280 as requested.

## Multi-Bed:

Please refer to attached RDS's contained within the PA & Building Contract 'Schedule Part 6 Section 6 Room Data Sheets', in particular Page 70 Revision 18/09/2014 (Multi-Bed: 4 Beds - G-A2-054 for example) clearly states 'positive pressure relative to the adjoining space'.

In addition, attached and contained within the PA & Building Contract 'Schedule Part 6 Section 6 Environmental Matrix' further clarifies and confirms 'relative pressure of 'positive to ensuite'.

The ADB (B0405) RDS referred to in mail MM-GC-002926: Re: Bedroom Ventilation (dated: 03/10/11) is not recognised and irrelevant to the project agreement.

We therefore conclude our design fully compliant with the PA & Building Contract.

**Single Bed:**

As an agreed design solution for single bedrooms and noted below the Board will receive PCo's Change for deviation of air change rates as recommended per SHTM 03-01.

Regards,

Colin

Ken  
FYI and review / response.  
For some reason KK left you off the distribution list.  
Can we please discuss when you have time .  
Thanks  
David.

**Subject:** Re: Bedroom Ventilation

David,

As previously described under MM-GC-002408, the Board does not believe these updates to the environmental conditions constitutes a Board Change. Without these updates, PCo's design was not compliant with BCRs and relevant guidance, and also from a patient safety perspective, was not acceptable to the Board.

In relation to point 1 & 2 below, as per Schedule Part 8 (Review Procedure) of the Project Agreement, please note that the RDD review doesn't remove PCo's obligation under the Project Agreement, and the Board did not receive a derogation/change from PCo for an alternative design.

In terms of point 3, the WW design report states that current ventilation design for single room and general ward areas are fully compliant with SHTM 03-01, please note however that this is incorrect. PCo proposed air change rates do not align (as stated in the report) with SHTM recommendations hence, without PCo change, the design as it stands is not compliant. The Board expects to receive PCo's Change for deviation of air change rates as recommended per SHTM 03-01.

Additionally, the Board notes that PCo used wrong design criteria for the multi bed rooms. As explained by the Board at the meeting on Monday 23 January, a "ward" constitutes the total bed complement of a designated area. Multi-bed rooms are much smaller sections within a ward that allow patients to be nursed as a small group. Within Children's Services these areas are important for the purposes of clinical safety as they allow cohorting of patients who require enhanced level of nursing observation/support either because they have the same type of infection, or are at similar stages of acute post operative recovery. Additionally, these rooms aid the normal socialisation and development of young children. Similarly, within DCN multi-bed rooms within the ward are used to cohort patients requiring enhanced levels of nursing/monitoring that is more difficult to achieve within single room environment.

Please note that Table A1 is a summary extract from the Activity Database (ADB) and as stated in the SHTM, PCo should refer to the full ADB Sheets for further details relating to multibed rooms. Please find attached, for your information, the design criteria for multibed areas.

Regards

Kamil

Kelly

Please find attached the updated ventilation drawings and associated narrative which accommodates the Boards request to have the 4 bedded ward at a negative or balanced pressure.

Our opinion is that this amendment to the environmental conditions and operation of these rooms constitutes a change for the reasons noted below.

1.0 Environmental matrix was signed off as status B with the noted design parameters that the current ventilation design represents - as per MM-GC-001398.

2.0 Full RDD ventilation zonal design pack and workshops have been through RDD and signed off.

3.0 Copy of WW design document outlining compliance with the SHTMs is attached.

We anticipate that the costs of this Change will be in the Medium Value category.

We look forward to the Board's, positive response to this request.

Kind Regards

David

David Martin

Room:	B0405	Multi-bed room: 4 beds RHSC
Room Number:	G-A2-054	Revision Date: 18/09/2014

AIR	Requirements	Notes
Winter Temperature (DegC):		Permissible space temperature range (dry bulb) (degC) : 18 - 25
Summer Temperature (DegC):		
Mechanical Ventilation (Supply ac/hr):	4.0	Ventilation Type: Natural & Central Supply Air
Mechanical Ventilation (Extract ac/hr):		via ensuite
Pressure Relative to Adjoining Space:	Positive	
Filtration (%DSE and % Arrestance):		G4 - minimum
Humidity (%RH):		

General Notes: Heating Type: Radiant Panels with TRV Remote Head Adj. Cooling: Comfort Cooled Fresh Air

LIGHTING	Requirements	Notes
Service Illumination (Lux):	100	
Service Illumination Night (Lux):	5.0	
Local Illumination (Lux):	300.0	@ Bed/trolley 1450 AFFL
Colour Rendering Required:	Y	Colour rendering characteristics (Ra):80
Standby Lighting Grade:	A	Lighting of the level and quality equal or nearly equal to that provided by normal lighting

General Notes: Control with Dimmer

NOISE	Requirements	Notes
Privacy Factor Required (dB):		
Mechanical Services (NR):	30	Intrusive Noise: SHTM 08-01 noise intrusion from external noise sources is not given in NR values but instead in LAeq,1hr and LAmax,1
Intrusive Noise (NR Leq):		45 daytime / 35 nighttime (LAeq,1hr) and 45 nighttime (LAmax,1)
*Acceptable Sound Level [L10dB(A)]:		
*Speech Privacy Required:	N	
*Quality Which Cannot Be Tolerated: (* alternative format)		

General Notes: Refer to HLM 252 series of drawings for partition types and Acoustic Report (PCP 4.13)

SAFETY	Requirements	Notes
Hot Surface Max. Temp (DegC):	43	
Hot Water Max. Temp (DegC):	41	

General Notes: Maximum cold water discharge temperature (degC): 20

FIRE
Enclosure:
Automatic Detection:
Refer to HLM 572 series of drawings and Fire Strategy Report (PCP 4.12)

4		4	DRA900	Drawer for monitoring consumables.		1
2		2	HOI006	HOIST PATIENT; electric; 24V; track ceiling mounted (Length of the track to suit the individual needs).		1
9		9	HOL005	HOLDER; bin; medium; capacity 70 litres; freestanding.		3
8		8	HOO900	Drip hook for water bag required.		1
8		8	HOO901	Integral adjustable drip stand with 6 hanging hooks.		1
4		4	HOO902	Hook for suction support; Upper Medirail mounted.		1
4		4	LIG900	Uplighter, pendant mounted.		1
4		4	LIG901	Small examination light.		1
2		2	MAT006	MATTRESS; ITU/CCU bed; extra care		3
2		2	MAT901	MATTRESS, reliever		3
4		4	MON904	MONITOR; High end multi-functionality for ITU/Theatre/High Acuity		3
4		4	MON909	MONITOR; Transport monitor for ITU/Theatre/High Acuity		3
2		2	OUT004	OUTLET cable, fused, 13 amp, ceiling mounted		1
4		4	OUT005	SOCKET outlet, switched, 13amp, single		1
21		21	OUT010	SOCKET outlet, switched, 13amp, twin		1
192		192	OUT012	SOCKET outlet switched 13amp twin; trunking/pendant mounted.		1
16		16	OUT095	Earth bonding point, pendant mounted.		1
4		4	OUT121	SOCKET outlet; computer data; double.		1
16		16	OUT131	SOCKET outlet double data/voice; wall/trunking mounted.		1
1		1	OUT206	SOCKET outlet television aerial; single; wall mounted.		1
16		16	OUT452	OUTLET; 4 kPa compressed air medical; trunking mounted.		1
16		16	OUT470	OUTLET, oxygen, medical		1
16		16	OUT475	OUTLET, vacuum, medical		1
4		4	OUT480	OUTLET, gas scavenging (AGS), medical		1

ADB		Schedule of Components by Room				B1609-01
Project:	11072	RHSC & DCN				
Department:	B1	PICU and HDU's - 24 Beds				
Room:	B1609-01	Open Plan Bay (4 beds)				
Room Number:	1-B1-031				Revision Date:	09/09/2014
Quantity			Code	Description	Alt. Code	Grp
New	Trans	Total				
8		8	OUT900	Data Input Box for CIS with 16 input channels (Lantronix); uses 1 plug, 1 data point		3
4		4	PEN1000L	PENDANT; critical care; twin arm; left hand monitor arm, with elbow joints; multi movement.		1
4		4	PEN1000R	PENDANT; critical care; twin arm; right hand monitor arm, with elbow joints; multi movement.		1
4		4	PEN1004	PENDANT; critical care; CIS; single arm with elbow joints; multi movement (to NHSL specification).		1
4		4	PRI015	PRINTER; label; portable		3
8		8	RAI900	Lower Medirail with mounts for suction pressure, suction control unused suction catheters.		1
4		4	RAI901	Monitor module rack pole mounted plus CO2/Press.		1
4		4	RAI903	Shelf and mount for monitor (tilt and swivel of screen required)		1
4		4	RAI904	Integral drip stand for transducers with hooks		1
8		8	SHE900	Shelf for airway consumables		1
4		4	SHE901	Lower height adjustable shelf for small monitors.		1
2		2	SUP2500	SUPPORT LEG; for 920 high worktop		1
1		1	SUP2501	SUPPORT LEG; for 720 high worktop		1
4		4	SUR985	Humidifier: 1 plug, 1 Data (Lantronix) cable		3
4		4	SUR986	Docking station with 7 volumetric pumps: 1 plug, 1 Data (Lantronix) cable		3
4		4	SUR987	Nebuliser mounted on Medirail : 1 plug		3
8		8	SUR989	Alaris volumetric pumps; 2 plugs		3
4		4	SUR991	Double oxygen flow meter: Upper Medirail mounted		3
4		4	SUR992	Air flow meter: Upper Medirail mounted		3
4		4	SUR993	Airway pressure monitor: Upper Medirail mounted		3
4		4	SUR999	Enteral feed pump		3
1		1	SWC025	SWITCH, light		1
4		4	SWC034	SWITCH, dimmer, modulating		1
4		4	SYR004	SYRINGE pump; anaesthetic use; with dilrifusor; 115H 400W 180D		3
4		4	TAP894	TAP bib; hospital pattern; integral thermostatic mixer; HTM64		1
4		4	TEL1000	TELEPHONE; handset		3
4		4	TRA1003	TRACK; curtain; bed/trolley; length and shape as drawn.		1
4		4	TRO131	TROLLEY, dressing/instrument, stainless steel, buffered, 870H 450W 450D		3
4		4	UPS003	Uninterrupted power supply (UPS).		1
4		4	WAS100	WASTE, unslotted flush-grated, metal, 1.1/4 in		1
4		4	WAS1000	TRAP; concealed waste; for back outlet basins.		1
1		1	WKT1003H	WORKTOP; 920 high 600 deep 40mm thick; with 50mm upstand; length as drawn.		1

1		1	RAI904	Integral drip stand for transducers with hooks		1	
2		2	SHE900	Shelf for airway consumables		1	
1		1	SHE901	Lower height adjustable shelf for small monitors.		1	
1		1	SUR985	Humidifier: 1 plug, 1 Data (Lantronix) cable		3	
1		1	SUR986	Docking station with 7 volumetric pumps; 1 plug, 1 Data (Lantronix) cable		3	
1		1	SUR987	Nebulser mounted on Medirail : 1 plug		3	
2		2	SUR989	Alaris volumetric pumps: 2 plugs		3	
1		1	SUR991	Double oxygen flow meter: Upper Medirail mounted		3	
1		1	SUR992	Air flow meter: Upper Medirail mounted		3	
1		1	SUR993	Airway pressure monitor: Upper Medirail mounted		3	
1		1	SUR999	Enteral feed pump		3	
1		1	SWC025	SWITCH, light		1	
1		1	SWC034	SWITCH, dimmer, modulating		1	
1		1	SYR004	SYRINGE pump; anaesthetic use; with diprifusor; 115H 400W 180D		3	
1		1	TAP894	TAP bib; hospital pattern; integral thermostatic mixer; HTM64		1	
1		1	TEL1000	TELEPHONE; handset.		3	
1		1	TRO131	TROLLEY, dressing/instrument, stainless steel, buffered, 870H 450W 450D		3	
1		1	TVM2500	TV / monitor flat screen with DVD player.		3	
1		1	UPS003	Uninterrupted power supply (UPS).		1	
1		1	VEN2500	Ventilator free standing: 1 plug, 1 Data (Lantronix) cable (would be the Servo I)		3	
2		2	WAS100	WASTE, unslotted flush-grated, metal, 1.1/4 in		1	
1		1	WAS1000	TRAP; concealed waste; for back outlet basins.		1	

ADB		Schedule of Components by Room				B1401-01	
Project:		11072		RHSC & DCN			
Department:		B1		PICU and HDU's - 24 Beds			
Room:		B1401-01		Single Bed Isolation Cubicle 10		Revision Date: 09/09/2014	
Room Number:		1-B1-036					
Quantity			Code	Description	Alt. Code	Grp	
New	Trans	Total					
1		1	BAS101	BASIN, medium, hospital pattern, vitreous china, no tap holes, no overflow, integral back outlet, 500W 400D		1	
1		1	BED003	BED; cot; baby; dropside; standard size		3	
1		1	BED2501	Mobile bed divider 1500W 1350H		3	
1		1	BIN2503	BIN; sharps disposal		3	
1		1	BRA2502	BRACKET; TV; height adjustable; swivel; wall mounted.		1	
1		1	CAL047	PUSH BUTTON staff emergency call; reset and integral/adjacent indicator lamp; trunking mounted.		1	
1		1	CHA002	CHAIR; height adjustable; medium back; swivel; 5 star base; on castors		3	
2		2	CHA2512	CHAIR; upright; with arms; vinyl plastic; stacking		3	
1		1	CLO003	CLOCK synchronous with second sweep hand, wall mounted		1	
1		1	COM904	CIS; CART; with CPU ; screen; keyboard & mouse		3	
1		1	CON902	Remote monitor control (cabling integrated into the pendant or WiFi)		3	
1		1	DIS013	DISPENSER, paper towel, wall mounted		2	
1		1	DIS030	DISPENSER, soap, disposable single cartridge, lever action, wall mounted		2	
1		1	DIS2500	DISPENSER; danicentre; combined glove/apron.		2	
1		1	DIS2503	DISPENSER; alcohol gel; disposable single cartridge; wall mounted.		2	
1		1	DRA900	Drawer for monitoring consumables.		1	
1		1	HOI006	HOIST PATIENT; electric; 24V; track ceiling mounted (Length of the track to suit the individual needs).		1	
2		2	HOL005	HOLDER; bin; medium; capacity 70 litres; freestanding.		3	
2		2	HOO900	Drip hook for water bag required.		1	
2		2	HOO901	Integral adjustable drip stand with 6 hanging hooks.		1	
1		1	HOO902	Hook for suction support: Upper Medirail mounted.		1	
1		1	LIG900	Uplighter, pendant mounted.		1	
1		1	LIG901	Small examination light.		1	
1		1	MAT901	MATTRESS, reliever		3	
1		1	MON904	MONITOR; High end multi-functionality for ITU/Theatre/High Acuity		3	
1		1	MON909	MONITOR; Transport monitor for ITU/Theatre/High Acuity		3	
1		1	OUT004	OUTLET cable, fused, 13 amp, ceiling mounted		1	
1		1	OUT005	SOCKET outlet, switched, 13amp, single		1	
5		5	OUT010	SOCKET outlet, switched, 13amp, twin		1	
48		48	OUT012	SOCKET outlet switched 13amp twin; trunking/pendant mounted.		1	
4		4	OUT095	Earth bonding point, pendant mounted.		1	
1		1	OUT121	SOCKET outlet; computer data; double.		1	
4		4	OUT131	SOCKET outlet double data/voice; wall/trunking mounted.		1	
1		1	OUT206	SOCKET outlet television aerial; single; wall mounted.		1	
4		4	OUT452	OUTLET; 4 kPa compressed air medical; trunking mounted.		1	
4		4	OUT470	OUTLET, oxygen, medical		1	
4		4	OUT475	OUTLET, vacuum, medical		1	
1		1	OUT480	OUTLET, gas scavenging (AGS), medical		1	
2		2	OUT900	Data Input Box for CIS with 16 input channels (Lantronix); uses 1 plug, 1 data point		3
